## NEWS SUMMARY

### GENERAL

#### Thatcher defends Sinn Fein ban

British Prime Minister Margaret Thatcher defended her decision to ban the Sinn Fein (Irish Republican) members of the Northern Ireland Assembly from entering Britain.

She said she had simply used her powers under the Prevention of Terrorism Act to exclude men who had an established involvement with terrorist activities.

Northern Ireland Secretary James Prior is understood to have supported the decision, which will expose him to criticism in Northern Ireland.

Greater London Council leader Ken Livingstone, who invited the three to speak in London, said he planned to visit Northern Ireland in the New Year. Page 16

#### \$230bn on defence

The U.S. House of Representatives adopted by 346 to 88 a peacetime record \$230bn defence appropriations bill, despite rejecting \$1bn for MX missile production on Tuesday. Page 4

#### S. Africa condemned

UN Secretary General Javier Perez de Cuellar condemned South Africa's incursion into Lesotho where troops killed 37 people in the capital Maseru. Page 5

#### Mozambique claim

Anti-Mozambican Government guerrillas claimed responsibility for a huge fire at an oil depot at the port of Beira. Page 5

#### Kohl election move

West German Chancellor Helmut Kohl will clear the way for a general election in March by deliberately losing a no confidence vote next week. Page 16

#### Lebanon gun battles

Gun battles broke out in Tripoli, north Lebanon, and Israeli troops imposed a curfew on the mountain resort of Aley to contain Druze-Christian clashes.

#### Airline lists held

Italian magistrates seized passenger lists from the Bulgarian state airline following the arrest last month of its Rome head for suspected complicity in the attempted murder of the Pope.

#### Smuggling charges

Mehmet Emin Karaman, who controls some of Turkey's biggest private banks and companies, has been charged with smuggling \$2m worth of Caterpillar spares into Turkey.

#### Fangio has surgery

Legendary Argentine racing driver Juan Manuel Fangio, 71, who won five Formula One world championships in the 1950s, underwent heart surgery in Buenos Aires.

#### Campaigner killed

Police shot dead an anti-nuclear campaigner who had held the Washington Monument under siege for 12 hours, as he tried to escape in a van which he said was full of dynamite.

#### Briefly...

Venezuela's new finance minister is Arturo Soa, 58.

Soviet Premier Nikolai Tikhonov arrived in Finland for talks with President Mauno Koivisto.

Jordan's King Hussein arrived in Tokyo for a four-day visit.

Several "lost" Laurel and Hardy films were found in a locker under a skating rink in the Yukon, Canada.

### BUSINESS

#### Grundig talks with major groups

GRUNDIG confirmed it was holding talks with other major European electronics companies, including Philips, Bosch and Siemens, following speculation about its future after it decided last month to take Thomson-Brandt of France on board as a major shareholder. Page 16

## EEC scheme for tougher control on steel prices

BY GILES MERRITT IN BRUSSELS

The European Commission yesterday unveiled a plan to impose tough new controls on the EEC steel industry, in an effort to halt the wave of price-cutting which has been disrupting Community markets.

It proposes to stamp out discounts - which have reached 30 per cent in some sectors - by fixing minimum prices set in Brussels.

In the past, the Commission has issued only price "guidelines" to the industry. From January 1 it plans, in effect, to post floor prices, monitor the market more firmly, and punish price-cutters.

Its scheme, which includes proposals for further reductions in production quotas put forward last week, is widely expected to be approved when it is presented by the EEC Industry Commissioner, Viscount Egon de Wit, at a meeting of Community Foreign Ministers in Brussels on December 14-15.

Industry Ministers agreed three weeks ago at an informal meeting in Eindhoven, Denmark, that the steel industry needed fresh discipline.

The new minimum prices published by the Commission yesterday represent an attempt to restore prices to the level reached during the summer, when the EEC's steel industry "crisis" regime had helped

raise average prices by 25 per cent over the previous 12 months.

Since the summer, however, widespread price cutting has eroded most of these gains.

Officials point out that to take account of the various ways in which price discounts can be operated, the new fines structure will not be as straightforward as the existing system for levying penalties on steel makers which exceed their production quotas.

The proposals to be put to the Foreign Ministers next week include a plan for the Community's output of main long products, such as beams and bars, to be reduced in the first quarter of next year to 5 per cent below present levels.

Output of most flat products should be reined back by 15 per cent.

The proposed minimum prices per tonne are approximately:

- Hot rolled strip, coils, plate and similar products - DM 845 (\$347).
- Cold rolled sheet - DM 1,070.
- Medium and heavy plate - DM 886.

The Bonn Government has been told by the European Commission that all further cash hand-outs for the stricken steel industry will be cut by 25 per cent.

The Commission's intervention comes hard on the heels of Bonn's own reluctant decision earlier this year to release further funds in order to save Saarsteel and the jobs of its 20,000 steelworkers.

Now the West German Government has received formal warning from Brussels that it will not be permitted to release aid promised to Saarsteel earlier this year unless the company's present

steelmaking capacity of some 2m tonnes a year is reduced by 500,000 tonnes.

In a letter to the Bonn authorities, the European Commission has pointed out that since July of this year some DM 410m (\$170m) in emergency funding has gone to Saarsteel, but as yet there have been no signs of the 200,000 tonnes capacity cutback that Bonn last month undertook to impose on Saarsteel.

The tough new demands by Brussels are being made by Mr Frans Andriessen, the Dutch Commissioner responsible for competition policy and the policing of the financial aids and subsidies code that is a key part of the EEC's crisis regime for the steel industry.

number of societies and organisations including the writers' union, a ban on public meetings and strikes, summary proceedings in the law courts and internment without trial.

An article in the Army daily newspaper *Zolniers Wolnosci* indicates that the authorities have chosen not to lift martial law outright but merely to suspend it.

The article said: "When martial law is suspended, its institutions and extraordinary legal procedures cease to function in practice."

This would suggest the end of a role for the Military Council of National Salvation which has formally wielded power since December 13 last year.

But since its most important members, like Gen Florian Swicki, the Deputy Minister of Defence and Gen Czeslaw Kiszcak, the Interior Minister, are now members of the party politburo, the military will retain a major role in decision making.

The legislation to be discussed by parliament in committee next week will define what suspension of martial law means in practice and which martial law powers will continue in force though exercised by the civilian authorities.

## Review of banks' capital ratios

By William Hall, Banking Correspondent, in London

BANKING supervisors from the world's leading central banks are pressing for a more common approach to the sorts of capital ratios international banks should observe and also a proper definition of what constitutes the capital of a bank.

At present, there is no common approach to the definition of bank capital and still less to the question of what constitutes adequate capital for a bank. This means that some banks can do the same amount of business with far less capital and this gives them a competitive advantage when pricing their loans to customers.

These differences have long been a source of irritation to leading U.S. and UK bankers who argue that their institutions are at a disadvantage when competing internationally with banks from countries such as France, which have far less capital per \$1bn of assets.

The Basic committee of banking supervisors, headed by Mr Peter Cooke, head of banking supervision at the Bank of England, has been working towards achieving greater convergence among its members with regard to national definitions of bank capital for supervisory purposes.

Mr Cooke told the Financial Times World Banking Conference in London yesterday that competition between banks can be affected by differing capital ratios and "some element of convergence for international banks competing in the same market place is a sensible and desirable thing."

However, he stressed that the issues raised were complex and it was not an easy thing to achieve. He also noted that, contrary to some people's ideas, there was a fairly clear correlation between high levels of bank capital adequacy and high levels of profitability.

The effect of differing capital ratios on competition between banks may be more apparent than real.

Nonetheless, he still felt that banking supervisors "should press gently towards some higher degree of convergence" on the question of bank capital. It is known that they have been concerned about the tendency for bank capital ratios to weaken in the last few years.

Mr Cooke said that one could overstate the impact of imbalances in bank capital ratios, but noted that greater uniformity in the ideas of individual supervisory authorities on the subject of what sort of capital a bank should have could come from the work being done in the EEC.

Under the terms of the Brussels authorities' intervention in the Saarsteel affair, the Bonn Government has been given until the end of April, 1983, to submit restructuring proposals that would cut Saarsteel's production capacity by at least 500,000 tonnes.

But in the meantime the Commission has made it plain that no further spending will be allowed until a letter containing a firm undertaking to restructure is received from Bonn.

Mr Burns recalled that when President Ronald Reagan last month announced an end to U.S. sanctions against the Soviet-Europe gas pipeline deal, he had stressed that Western accord had been reached in four main areas:

- that new contracts for Soviet natural gas would not be undertaken while an urgent study of alternative energy sources was being made;
- that existing controls on transfer of strategic items to the Soviet Union would be strengthened;
- that procedures for monitoring financial relations with Moscow would be established promptly;
- and that the allies would work to harmonise their export credit policies.

"Long and difficult negotiations on ways of carrying out the agreed

## Toshiba will open factory in Germany

BY JUREK MARTIN IN TOKYO

TOSHIBA, one of Japan's big four electronics manufacturers yesterday ended a three-year search for a site to set up a semiconductor plant in Braunschweig, West Germany, next year.

The company becomes the fourth leading Japanese producer of integrated circuits to establish a European assembly operation: the others are Hitachi, also in West Germany, NEC, in Ireland and Scotland, and Fujitsu in Ireland.

Toshiba executives in Tokyo freely conceded that an important reason for the move was the existing 17 per cent duty on semiconductor imports in force in the European Community.

Another reason - although not, they stressed, a major consideration - was the possibility that the Community might at some time lay down restrictions on Japanese semiconductor imports.

The wholly-owned Toshiba plant at Braunschweig has an initial paid-in capital of DM 10m (\$4.1m). A total investment of DM 32m is planned between now and 1985.

Initial production, scheduled to begin towards the end of next year, has been set at 1m pieces per month, although this is expected to double within three years.

The total Japanese share of the European semiconductor market, according to Toshiba, is less than 10 per cent with Toshiba itself taking between 1 and 2 per cent.

Even so, this amounts to a substantial and growing business. Toshiba's shipments to Europe this year will be worth about ¥13bn (just over \$54m). When fully operational the Braunschweig plant should take up 20-30 per cent of the company's European sales, rising to an estimated 50 per cent over a three-year span. European demand for integrated circuits should continue to grow by 20-30 per cent a year.

Initially, Braunschweig production will concentrate on 16-kilobit static Ram chips, already one of Toshiba's best selling lines and in which it is one of the world's market leaders. The next stage will involve 64-kilobit static and dynamic Rams, while further down the line, gate array LSI's and microprocessors will be added.

## Akai looks again at French VTR plans

BY OUR FOREIGN STAFF

AKAI, the Japanese television and radio manufacturer, is studying the possibility of assembling video tape recorders (VTRs) in France from early next year, as one way round the Paris Government's curbs on imports of video sets.

Meanwhile, a group of European video manufacturers is to call on the European Commission to take action against Japanese competitors for allegedly dumping equipment on the European market.

Akai France last month suspended its plans to manufacture VTRs at its Honfleur plant, following the Paris Government's insistence that all completed video sets be processed via the small town of Poitiers.

Akai planned a FFf 18m investment to extend the Honfleur plant which makes tuners for audio equipment. But the investment depended on the company, which holds 13 per cent of the French VTR market, continuing to expand its sales. And as a result of the Poitiers restrictions sales might be 25,000

short of the 75,000 volume expected. Decisions on whether to go ahead with the Honfleur investment or cut the existing workforce are to be taken by the end of the year. M Christian Paellot, manager of Akai France said.

The dumping action in Brussels is to be brought by the Video 2000 Group, made up of 11 manufacturers based in Europe, led by Philips, Siemens, IIT and Grundig.

It was signalled last month when Philips and Grundig jointly asked the EEC to investigate the feasibility of such an action against the Japanese. It comes amid intense VTR price competition in Germany where Grundig has had to cut prices by 30 per cent recently to be competitive with Japanese imports.

The European Commission has been engaged recently in seeking to establish whether the Japanese have a case to answer. Philips said yesterday that the group believed its allegations were being taken seriously in Brussels and that a formal complaint would be presented

## EUROPEAN NEWS

## Paris uses more of European credit

By David Marsh in Paris

FRANCE has used up a further small portion of its recently arranged \$4bn (FFr 27.6bn) Euro-market credit in order to lend off pressure on the franc, according to statistics released yesterday by the Bank of France.

Its weekly reserve statement showed a further FFr 3bn fall in net French currency reserves in the latest week ending December 2. This took the net fall in currency holdings over the latest three-week period to nearly FFr 7bn, and reduced the central bank's basic stock of freely available foreign exchange "ammunition" to an exceptionally low FFr 11.4bn.

The franc came under pressure against the D-Mark within the European Monetary System at the beginning of this month, requiring the central bank to intervene on the foreign exchange.

Yesterday's statistics indicated that the central bank had used up a further amount of about FFr 1.5bn of the Euro-market credit in order to sell currencies and buy francs.

Of the \$4bn credit, about \$2.4bn has been drawn down

## Lambsdorff takes Jobert to task over remarks on protectionism

By Jonathan Carr in Bonn

COUNT Otto Lambsdorff, West Germany's Economic Minister, has sharply rebuffed French claims that he preaches trade liberalism but practices the opposite.

The minister's tough remarks, made in a speech in Bonn yesterday, are further evidence of the growing friction in trade matters between Bonn and Paris.

Count Lambsdorff said the French Foreign Trade Minister, M Michel Jobert, had recently described the rules of General Agreement on Tariffs and Trade (GATT) as suitable only for a fine weather period of the world economy.

M Jobert had added, Count Lambsdorff said, that "the dogmatic liberalism preached by many—and that meant me—was

in fact the subtlest form of protectionism, namely that of absolute power by the stronger over the weaker."

But what was this so-called "dogmatic liberalism," Count Lambsdorff asked? Among other things, he said, it involved respect for GATT principles like non-discrimination, and the removal of subsidies and other measures which distorted trade.

The "so-called non-dogmatists" sought to protect their own industry and jobs from imports, Count Lambsdorff said. Was this the way to promote the international division of labour and prosperity? It was superfluous to give an answer, he asserted.

Behind this public display of criticism lies Bonn's fear that Paris may shortly feel forced to

take further measures to try to cut its sharply rising trade deficit.

France last year had a deficit with West Germany of some DM 12bn (£3.03bn)—and in the first nine months of this year the gap had increased to more than DM 13bn.

While West Germany's imports from France from January to September rose by about 6

per cent, its exports to France have gone up by more than 19 per cent.

President Francois Mitterrand urged Chancellor Helmut Kohl to take steps to help reduce the gap when the two leaders met in Paris for talks on Tuesday. But it remains unclear what effective action West Germany could take.

Jobert denial—Page 4

## Farm subsidies at centre of EEC-U.S. talks

By John Wyles and Giles Merritt in Brussels

THE LARGEST delegation of senior U.S. cabinet officials ever to visit Brussels will join the European Commission today in a bid to find a mutually agreeable path away from an agricultural trade war.

The U.S. team, led by Mr George Shultz, the Secretary of State, is said to be anxious to prevent the increasingly vituperative war of words between the two sides spilling over into a

subsidies battle in which U.S. and European farm products undercut each other in world markets.

However, it appears that Mr Shultz and his colleagues will not renounce this ultimate option without firm commitments from the EEC to introduce greater discipline over its internal farm production and over the disposal of surpluses through the use of export sub-

sidies. M Gaston Thorn, the Commission's President, and his senior colleagues will emphasise their efforts to minimise internal farm price rises for products in surplus and to apply other measures to curb overproduction.

They are also expected to urge the U.S. to consider joint co-operation in the marketing of some products in order to

stabilise and, if possible, raise, world prices.

The inclusion of Mr Donald Regan, Treasury Secretary, in the U.S. team could be significant following his call earlier this week for an overhaul of the world monetary system.

The Commission has successfully persuaded the 10 to endorse this as a global financial objective with the aim of

## Fanfani to present austerity package

By James Buxton in Rome

SIG Amintore Fanfani, Italy's new Christian Democrat Prime Minister, today presents his Government's programme to Parliament. It is likely to include urgent legislation to allow the swift imposition of economic austerity measures.

Although an outline economic programme was hammered out with considerable difficulty in the negotiations which led to the formation of the four-party coalition, the details of the measures have yet to be finalised and have already given rise to further argument within the coalition.

The objective is to hold down the public sector borrowing requirements for next year to L63,500bn (\$45bn)—less than the expected out-turn for this year, which will probably reach L70,000bn—and cut in-

flation from the present rate of 16.7 per cent to an average of 13 per cent next year.

To do this, additional measures, including further spending cuts and a "once and for all" levy on incomes, are necessary, over and above the provisions of the Finance Bill introduced by the previous Government of Sig Giovanni Spadolini, some of which have been approved by Parliament.

The new measures will have to be introduced rapidly, perhaps by decree, if they are to make a serious dent on the economy during the course of 1983. But it has been difficult for Sig Fanfani to reach agreement on the exact form of the measures, such as who the special income tax would most affect.

## EEC reviews plan for work-sharing

By Giles Merritt in Brussels

EEC MEMBER governments will today be presented with fresh ideas on work-sharing that the European Commission believes should form the basis of a policy framework to stem rising unemployment in the Community.

As part of its continuing campaign to achieve a concerted EEC jobs strategy that would embrace work-sharing techniques, the Brussels Commission is to present a new memorandum on the subject to the EEC Social Affairs Council

Prepared by Mr Ivor Richard, the UK Commissioner who holds the EEC social affairs portfolio, the "memorandum on the reduction and reorganisation of working time" is intended as the basis for more concrete work-sharing pro-

posals that the European Commission plans to put to member governments before mid-1983. The Richard memorandum advances five broad points on which future EEC policy recommendations will be based.

Introducing Night Star.  
The parcels service that delivers.

Night Star has something that no other overnight delivery service can offer.

It's called a train.

If you've ever sent a parcel Red Star you'll know our extensive network and how reliable it is.

Red Star is still the fastest parcels service station to station, but where delivery to your customer's door is

vital, Night Star is the choice.

If you put your parcel on a train scheduled to arrive at its destination station before 07.00, we'll give you a money-back guarantee that it will be delivered by noon.

If you put it on a train scheduled to arrive between 07.00 and noon, we offer the same guarantee that it will be delivered by 17.30 the same day. (In

both cases providing there is somebody there to take delivery.)

You'll find we deliver to nearly 700 post towns throughout the country. That covers more than 90% of business centres.

And there's even more: facilities for late acceptance; no extra charge for morning delivery. Saturday morning deliveries, compensation for loss

or damage at £10,000 per tonne—all at no extra charge.

For full details pick up the Night Star folder at your local Red Star office.

Try it once and we think you'll agree that it's a breakthrough.

## Tribunal setback for CGT

By David Housego in Paris

THE COMMUNIST-LED Confédération Générale du Travail (CGT), the largest French trade union, has suffered a serious setback in elections to new labour tribunals.

At the same time, the results announced yesterday reflect a sharp rise in support for minority union and employer organisations which have been sharpest in their criticism of the Government.

The elections held on Wednesday were to choose union and employer representatives for the "prud'homme" councils—an institution developed under Napoleon as a tribunal to settle individual disputes between employer and employee.

They were seen as the first important test of strength between the rival unions since the Socialists came to power as new labour legislation is strengthening the role of unions in industry.

The vote was also seen as an indicator of the popularity of government policies.

The most striking feature to emerge is the major reverse for the CGT, whose share of the vote dropped from 43 per cent in 1979 at the time of the last "prud'homme" elections—to 37 per cent. This decline is in line with the Communist party's falling share of the vote during the presidential and legislative elections last year. It is also a blow to M Henri Krasucki, the new hard-line secretary general of the union, who took over its leadership this year with the goal of restoring popularity.

M Krasucki yesterday put much of the blame for the CGT's loss on worker discontent with government policies, but there is no doubt that the CGT's result also reflects increasing disenchantment with its archaic structure and its unpopular policies over issues such as Poland.

## Austria moves into current surplus

By Paul Lendvai in Vienna

FOR THE FIRST time since 1969, Austria achieved a surplus on current account between January and October of Sch 5.5bn (\$321m), compared with a deficit of Sch 14.9bn in the corresponding period last year.

Figures from the national bank indicate that about two thirds of the change was because the trade balance was better than expected. The rest was attributable to services account.

Dr Herbert Salcher, Finance Minister, has stressed that with the exception of the Swiss franc, the Austrian schilling has, since 1971, been the strongest currency, appreciating by some 25 per cent against the U.S. dollar and about 50 per cent against sterling.

Prof Stephan Koren, president of the central bank, warned that the improvement in the external payments position should not be exaggerated.

## EUROPEAN NEWS

## Threat to £433m British rebate from EEC budget

BY JOHN WYLES IN BRUSSELS

THE BRITISH Government may need to rely on the indifference of some members of the European Parliament to ensure payment before the end of the year of a £433m rebate from the EEC budget.

The payment is threatened by the hostile attitude of the Parliament's budget committee which has set very tough conditions before it is ready to recommend that next week's plenary session adopt the supplementary budget implementing the British deal.

Many officials doubt whether the Council of Ministers will meet the budget committee's terms, which means the issue may become a trial of strength on the floor of the Assembly.

Procedural rules require 218 of the 434 members to take part in a vote and a two-third majority is required to reject the supplementary budget.

Comfortably more than half of the members can be expected to turn up at next week's Strasbourg session and the nationalities and the groups with the best attendance record should provide an important kernel of support for the supplementary budget.

Attendance records for the first nine months of the year show that the 63 British Conservatives belonging to the European Democratic Group have the best record by turning up for 79 per cent of the days the Parliament has been sitting.

Although some of them may support the budget committee's terms, it is expected to actually vote against the supplementary budget.

Similarly, a large proportion of the 81 West German members sitting as Christian Democrats, Socialists and Liberals can be expected either to support the supplementary budget or to abstain.

## Danish investment plan

BY HILARY BARNES IN COPENHAGEN

THE DANISH Government has published an investment promotion programme intended to supplement its anti-inflation policies by improving the investment climate.

Industrial organisations welcomed the proposals, saying that they represented a change of attitude on the part of the government. But they doubted whether the measures would have much immediate effect.

The lengthy list of proposed measures includes the introduction of tax deductions for investments in shares, more flexible rules for the use of tax-free investment funds by companies, and other measures to encourage the flow of risk capital.

Allocations to research and development institutes will be increased and the construction of a "broad band" telecommunications network brought forward. The market for telecommunications equipment will be liberalised.

to turn up at next week's Strasbourg session and the nationalities and the groups with the best attendance record should provide an important kernel of support for the supplementary budget.

Attendance records for the first nine months of the year show that the 63 British Conservatives belonging to the European Democratic Group have the best record by turning up for 79 per cent of the days the Parliament has been sitting.

Attendance records for the first nine months of the year show that the 63 British Conservatives belonging to the European Democratic Group have the best record by turning up for 79 per cent of the days the Parliament has been sitting.

Although some of them may support the budget committee's terms, it is expected to actually vote against the supplementary budget.

Similarly, a large proportion of the 81 West German members sitting as Christian Democrats, Socialists and Liberals can be expected either to support the supplementary budget or to abstain.

Attendance records for the first nine months of the year show that the 63 British Conservatives belonging to the European Democratic Group have the best record by turning up for 79 per cent of the days the Parliament has been sitting.

Although some of them may support the budget committee's terms, it is expected to actually vote against the supplementary budget.

## General Motors' latest plant in Europe opened on schedule, writes David Gardner in Figueruelas

### Arrival of the giant is challenge to Spanish industry

BILLBOARDS ACROSS Spain had been warning for a year that "the giant is coming" before the first Corsa—General Motors' "S" car—rolled off the assembly lines of the company's gleaming new plant at Figueruelas in the Zaragoza region on August 30, right on the button.

"A new era in Spanish industry has been inaugurated," said Sr Jose Ignacio Lopez Arriortua, GM Spain's head of industrial organisation, speaking a week ago shortly after King Juan Carlos had formally opened the \$1.7bn (£1,068m) plant, Spain's largest single foreign investment and the most modern car assembly operation in Europe.

In the dusty little farming village of Figueruelas itself remarkably little has changed, beyond the addition of two new bars and the provision of a badly needed access road. Last week the locals were gearing up for the year's second week-long fiesta. Asked that GM had refused to part with Pta 18,000 (£88) for an advertisement in the official fiesta programme: an enterprising local Renault dealer stepped in to fill the gap.

This little local setback is one of very few that the world's largest auto manufacturer has experienced in mounting its major challenge to the European small car market, in an operation that has so far run like clockwork.

The 400,000 sq metre Figueruelas plant took just 389 days to complete, from the laying of the first stone to the production of the first car, despite the involvement of some 100 contractors. GM hopes to produce 30,000 cars this year—about 10,000 more than it had originally expected. The target for next year is 200,000 and 270,000

for 1984, at least two-thirds of them for export.

Management declares itself well-pleased with the progress of hiring and training. Over 1,500 of the 6,800 workforce (a further 3,000 are to be taken on over the next six months) have completed training courses of three months to a year at GM's Opel plant near Frankfurt, conversely skilled Spanish emigrants employed by Opel have been down to Zaragoza to assist in local training.

The odd hiccup that has occurred has had nothing to do with the plant itself. GM, for example, had an undertaking that it would be allowed to import 15,000 cars tax-free to get its sales network going before production started, and was put out when the authorities decided that it would, after all, have to pay the full 36.7 per cent tariff.

As for the product itself, several of the 300 West Germans still working at Figueruelas believe the Corsa to be of superior quality to its Opel-made stablemates, according to Sr Lopez Arriortua, the director of industrial organisation.

He points out that this is the first time a multinational has installed in Spain technology more advanced than that in use at its home base. Ninety-eight per cent of the spotwelding at Figueruelas is done by the 147 robots so far installed on the two-mile long assembly line against an average 65 per cent at Opel's West German plants.

Sr Arriortua, a Basque who spent 19 years working for Westinghouse in Britain, describes coming to GM as rather like the experience of a footballer transferring to Real Madrid or Barcelona. "It's

Spain's largest single foreign investment: GM's plant at Figueruelas.

what we've waited for all our lives," he says. He is deeply impressed by GM's "total" approach. The GM unions, understandably, take a more sanguine view.

There are few complaints about safety and hygiene, to which GM has devoted unusual attention. It has spent around Pta 85m, for example, equipping a small hospital complete with operating theatre, X-ray and analysis units, staffed by six doctors and nurses in each sector of the factory.

Problems will certainly arise, however, over work-rate speeds and both the form and amount of payment. Figueruelas is designed to produce 1,200 cars a day at an average of 75 cars an hour.

According to a union leader from Renault's Fasa plant in

Valhadolid, GM workers are producing 20 per cent more for nearly 20 per cent less payment than Renault workers. Indeed, GM pays less than any of Spain's other five auto manufacturers apart from Seat, the troubled national car producer, according to the Communist-led Workers Commissions. But it is GM's peculiar form of payment which riles most.

A semi-skilled worker on Pta 68,851 (£335) a month gross gets only Pta 33,631 of this as his basic wage. According to the standard GM contract, the rest (Pta 30,220) is remuneration for good attendance and punctuality, and vaguer concepts like "dedication." The unions—and some managers—regard this system as a throwback to Francoism and are determined to do away with it.

The Commissions, Spain's

largest union—though their position is being challenged with increasing effect by the rival Socialist UGT—have an additional axe to grind. They claim that GM set out deliberately to cultivate the UGT—for example by ferrying officials to Detroit and Frankfurt before the project was properly underway. "We had to almost infiltrate the plant," they claim.

The UGT hotly denies this charge of favouritism, saying that they were merely quicker off the mark: they set up a recruiting office on the site the day the first stones were laid. Yet the Zaragoza region, largely made up of small-to-medium-sized industries and an increasingly depopulated countryside, has little tradition of labour militancy, a factor which undoubtedly influenced

GM in choosing it in preference to similarly well-placed and subsidised sites with less pliant workforces.

The effect of the "coming of the giant" on the local economy is as yet difficult to gauge. GM estimates that each job will create three more jobs indirectly which, with unemployment in Spain running seven points above the EEC average, is a considerable selling point. Local ancillary industries, particularly in the Basque country and Catalonia, have received a much-needed boost.

Yet the content of the Corsa will be only 50 per cent Spanish against, say, the 90 per cent demanded of Ford in 1976. And there is concern that GM's eventual target of selling some 30,000 cars in the local market will hit jobs at other car plants, particularly Seat and Fasa-Renault.

The effect on Figueruelas itself has been minimal. The village's pattern of existence was established at the beginning of the 11th century, when the Arabs built what is now the Aragon Imperial Canal to irrigate the surrounding countryside, producing maize, cereals and fruit. New era or not, the village is not suddenly going to start beating to the rhythm of round-the-clock shifts.

Sr Lorenzo Lasala and his wife Srta Maria Jesus Gonzalez, a young couple from a neighbouring province, set up one of the two new bars in Figueruelas in anticipation of a GM-induced gold rush. There is more money around now but they have abandoned all hope of a boom. The locals spend little of their new-found riches, and as for foreigners, they have had more custom from journalists than free-spending car executives.

## Hungary shows 1982 turnaround

BY DAVID BUCHAN, EAST EUROPE CORRESPONDENT

HUNGARY is ending a remarkable year with a sharp turnaround in its fortunes, principally in the form of \$1.6 bn (£900m) in new international credits, but also in terms of an improved economic balance with the western world.

It started 1982 with a liquidity crisis, caused by deposit withdrawals by Western, Comecon and Arab banks which came on top of the general inability of East European countries to raise fresh credit. Drained of reserves, Hungary was, by last March, very close to having to follow its Comecon partners, Poland and Romania, into a rescheduling of debts.

But the country ends this year with a pile of fresh credit—\$810m from Western central banks, \$280m from Western commercial banks, and capped this week with \$600m from the International Monetary Fund—and a modest hard currency trade surplus.

Why has foreign confidence in Hungary returned in a flood, particularly when it has clearly outrun Hungarian export performance in stagnant Western markets?

A superficial reason is the "salesmanship" of an exceptionally able team at the Hungarian National Bank. More basic is the perception abroad that Hungary, with its market-oriented reforms, has given itself a flexible and buoyant economy which did not deserve to be sunk by the post-Poland freeze on credit for Comecon.

Most importantly, Hungary has been seen for the past couple of years to be pursuing the kind of demand-squeezing, investment-pruning and export-promoting policies necessary to push its external accounts back into balance.

This has been crucial to smooth relations with the IMF, which Hungary only joined in May. Negotiations for an IMF standby credit started in September, and were wrapped up early last month. Hungary has been able to claim that it made the running, not the IMF staff.

Hungary is the first Comecon country for 10 years to join the IMF, an institution of which the Soviet Union is inherently suspicious as capitalist and U.S.-dominated. To the extent that

Moscow is anxious or irked about any of its allies accepting other external supervision, Hungary's IMF programme can plausibly be presented so as to placate such concerns.

The overall aim of the programme agreed between the IMF and the Kadar Government is for Hungary to achieve in 1983 a \$600m hard currency surplus on current account (comprising merchandise and invisible trade, and debt interest payments). Officials in Budapest and Washington say this is ambitious, but feasible.

The means by which this is to be achieved are: a 3-4 per cent decline in domestic consumption, resulting from a 10 per cent drop in fixed asset investment, state budget cuts and a 1.5-2 per cent decline in real incomes.

Total growth in the economy of only 0.5-1 per cent, the lowest for many years, but in 1983 to be led by exports.

But virtually the only undertaking which Hungarian officials care to characterise as an IMF condition is a commitment to phase out by the end of 1983 certain import restrictions introduced last September.

..... For a moment I thought you said you wanted an Alfa Romeo.....

Asking your boss for an Alfa Romeo as a company car will almost certainly raise an eyebrow or two.

A few laughs, perhaps. And possibly objections. But, armed with a little help from us and a modicum of persuasion from you, it's easy to put together an argument that would persuade even the most unyielding of superiors.

He'll start by saying that they're far too fast and powerful.

So nod. And smile wryly. (Don't, for heaven's sake, mention the 128mph GTV6 or even the 109mph top speed of the Alfesud 1.5 Ti!).

Undaunted, he'll complain about the price.

So tell him that the range starts from just £4900\* including disc brakes all round, a rigid steel safety cage and a 5 year anti corrosion guarantee.

That'll floor him! But be prepared for the inevitable question of running costs.

This is where you go into fifth gear. Because in lots of cases Alfa Romeo can offer a Fleet Plan that will reduce service and repair costs to a bare minimum.

And if he butts in, tell him there's also a free 12 month membership to the Emergency Service plan which provides a free replacement in the unlikely event of a breakdown.

Finally, tell him that out of the complete range of Alfa Romeos, there's even one—the GTV6—that will perfectly suit his own immense personal charisma and style.

And if that doesn't persuade him—resign.

For further information contact the Alfa Romeo Hotline on 01-897 6958.

## Congress adopts record peacetime defence budget

BY REGINALD DALE, U.S. EDITOR IN WASHINGTON

THE U.S. House of Representatives has overwhelmingly adopted a peacetime record \$230bn (£142bn) defence appropriations Bill. The voting, 346 to 68, clearly indicated that the House is still in favour of a substantial defence build-up, despite its dramatic rejection on Tuesday night of nearly \$1bn in funds for production of the new MX intercontinental missile.

Although there is some scepticism in Congress about the MX and its proposed "dense pack" basing system, as shown by Tuesday's vote, the House voted overwhelmingly to keep the programme at least ticking over by approving \$2.5bn for development and research and studies of basing methods for the missile.

The MX's future now seems to depend on whether the Pentagon can come up with a satisfactory basing mode—a proposition about which many in Congress are exceedingly doubtful. Mr Ronald Dellum, a California Democrat, noted that 34 different proposals have already been rejected.

Money for other important military programmes, such as \$3.9bn in procurement funds for the B-1 bomber and \$7bn for two new nuclear-powered aircraft carriers, went through smoothly.

The House rejected attempts by opponents to provide funds for a single carrier. The opponents argued that the true cost of a carrier was \$42bn if the price of aircraft and escort ships was added. They also argued that the Falklands war had shown the vulnerability of big ships—argument rejected by carrier supporters, who said that British analyses of the war had shown that if the task force had had big carriers, their aircraft could have kept the Argentinean air force out of range of the British fleet.

Before it passed the Bill, the House unanimously approved a motion that no funds in the defence budget could be used to "arm, train or support persons, not part of a regular army, for the purpose of overthrowing the government of Nicaragua or provoking a military conflict between Nicaragua and Honduras."

The provision was directed against the Administration's backing for Nicaragua exiles fighting a "secret war" against the Sandinista regime from bases in Honduras. However, this does not bar the Administration from aiding the exiles so long as the funds are intended for purposes other than overthrowing the government. Editorial comment, Page 16

## Venezuela appointment

By Kim Foad in Caracas

SR ARTURO SOSA, a 58-year-old lawyer and economist, will be sworn in today as Venezuela's Finance Minister, replacing Sr Luis Ugueto, who resigned on Wednesday after almost four years in the post.

His appointment followed a week of speculation over changes in the Venezuelan economic cabinet as a result of clashes between Sr Ugueto and Sr Leopoldo Diaz Bruzual, the central bank president.

Sr Sosa, who describes himself as a "life-long friend" of Sr Diaz Bruzual, was finance minister under the provisional government of Admiral Wolfgang Larrazabal in 1958.

## Peace hopes at Chrysler

By Nicholas Hirst in Toronto

CHRYSLER CANADA and negotiators for the United Auto Workers union came to a surprise tentative agreement on a pay offer yesterday paving the way for settlement in the parallel talks between the parent company and the union in the U.S.

Mr Douglas Fraser, the international president of the UAW, said he was "pleased" with the work of the agreement and I think we can adapt this to the U.S.

A breakthrough in the Canadian talks came after Mr Fraser and Mr Thomas Miner, Chrysler corporation top negotiator, entered the talks in Toronto on Wednesday.

## Brazil's talks with IMF focus on rate for cruzeiro

BY ANDREW WHITLEY, IN RIO DE JANEIRO

TALKS between Brazil and the International Monetary Fund on terms for a \$2.5bn (£1.5bn) stand-by loan have reached a decisive stage. The two sides were due to meet again yesterday with the IMF's reported proposal of a substantial devaluation of the cruzeiro as the most controversial item on the agenda.

Overshadowing the IMF negotiations are growing fears that the urgently requested \$2.4bn in short-term commercial loans may be coming in at too slow a rate to avert a full-scale moratorium by Brazil on its estimated \$89bn external debt.

The central bank is trying to strike a positive note, stating that "the money is coming in" in response to last week's telexes from Brazil's central bank to 28 Western and Japanese banks. But Sr Carlos

Langoni, the bank's governor, is believed to be becoming increasingly impatient with the dilatory attitude of the European banks.

At the latest count yesterday some \$1.3bn-\$1.4bn in short-term loans was on the table for Brazil, but about \$900m of this came from U.S. banks, some of whom are also growing irritated by the slow rate of response from European institutions.

"It's like a conspiracy against Latin America," commented one U.S. banker, who added that there are a number of institutions in Europe with much higher exposure to Brazil than major U.S. banks.

British banks, who have been asked to raise \$297m in short-term loans, have only promised \$100m. French banks, who have been asked for about \$210m, have only promised \$100m.

that export contracts will be awarded to French companies.

Very little money is said to have been committed by West German institutions.

Complicating an already highly delicate scenario, it is believed that Sr Ernane Galves, the Finance Minister, has resubmitted an earlier resignation letter to President Joao Figueiredo.

On Wednesday the Finance Ministry denied that Sr Galves had any intention of resigning. But he added that a decision of this nature "would not be opportune" at this time, given the difficult straits Brazil's economic policy is in.

Sr Galves has held the post for nearly three years and is thought to have wanted to resign for some weeks. Sr Langoni is tipped to take over, but his departure may well be postponed until the present

crisis is resolved.

The Government's timetable calls for the negotiations with the IMF to be concluded over the next week, if possible.

The national monetary and fiscal budgets for 1983 could then be approved by the National Monetary Council at its next meeting, probably on December 22.

The way would then be clear for the central bank to launch as large a jumbo loan as the market could stand. Sr Jose Serrano, the bank's director for external finance, has publicly confirmed reports that the aim is to take Brazil out of the international money market for some months.

The IMF negotiations may also result in a complete volte-face in the strategy the Brazilian government has recently adopted towards capturing foreign loans—returning the main responsibility to the public

sector rather than the private sector.

Sr Langoni announced this week that the lifting of domestic credit controls was under study, with the aim of bringing down high interest rates.

Meanwhile Brazilian interest rates are staying high in anticipation of a "maxi" devaluation of the cruzeiro, over and above the present small changes at frequent intervals in the exchange rate which are designed to keep pace with local inflation. There is speculation that the IMF believes a 10 per cent to 15 per cent devaluation will aid exports—an argument contested by the government.

The IMF's application to the IMF has stirred up virtually none of the nationalistic antagonism the government was fearing before it made the announcement.

Two unlikely allies in their charges that the government waited too long before going to the IMF—until the reserves were virtually exhausted and the country's bargaining position weakened—are Sr Roberto Campos, the former Finance Minister and ambassador to London, and Sr Tonero Nery, a veteran politician and the newly-elected opposition governor of Minas Gerais state.

Criticism of the proposed change in the salary law, doing away with the automatic six-monthly adjustment of wages in line with the inflation rate, has come from Sr Albano Franco, president of the National Confederation of Industry, on the grounds that this could provoke serious social unrest.

Jimmy Burns in Buenos Aires assesses the rise of Sr Alfonsín, leading light of the Radical Party

## Charismatic radical blames army for Argentine chaos

"HE KNEW how to convey to his people a message of hope in a language they understood," says Sr Raúl Alfonsín, explaining the meteoric rise of a century ago of General Juan Peron, Argentina's almost legendary late President whose legacy, for better or for worse, still continues to underpin much of Argentine political life. Supporters of Sr Alfonsín—the 56-year-old lawyer who is rapidly emerging as the leading light of the country's second largest political grouping, the Radical Party—say much the same about their leader.

Watching Sr Alfonsín's performance over the last few months, it is hard to disagree with them. Even his enemies now consider him a dangerous front runner for the presidency, assuming that Gen Reynaldo Bignone sticks to his pledge and holds elections in the last quarter of 1983.

Sr Alfonsín wasted no time last June when President Bignone lifted a ban on political activity and called on the parties to prepare themselves for internal elections. Many political leaders chose tentatively to explore their potential support in cautious behind-the-scenes lobbying. But Sr Alfonsín immediately called a public rally in one of Buenos Aires' leading sports stadiums.

He said that his audience not only filled it but also spilled out in an euphoric and uncontrollable wave to the surrounding streets was a personal victory. After seven years of repression and fear, Argentines have emerged from their self-imposed shells only with difficulty, and have warmed to Sr Alfonsín's open style.

More recently Sr Alfonsín has lost none of his initiative. He has staged rallies all the way from the Andes to Patagonia, sharing out his time between the more obvious city centres and the less accessible provincial townships and urban industrial belts.

On Tuesday night his nationwide tour culminated in a mass rally in the capital's Luna Park. The event clearly demonstrated the extent to which his popular support had grown. An audience of over 30,000 people made the rally the biggest gathering to be staged by a single political party since the 1976 military coup.

In July an attempt by Sr Alfonsín's left-wing faction, *Renovación y Cambio* (Renewal and Change), to wrangle control of the Party leadership from the conservative Sr Carlos Concha failed to get through Party bureaucracy in a complex internal election. But Sr Alfonsín's charisma and his ability to convince Sr Concha's position had been irreversibly eroded and that he would not stand as a future presidential candidate. Sr Alfonsín's officials were also given prominent places on the Party's executive board.

Raúl Alfonsín... Argentines have warmed to his open style.

Five months later Sr Alfonsín's rivals are trying to put forward alternative candidates, although most privately admit that their rear-guard action has come too late. Moreover, they have reluctantly concluded that in Sr Alfonsín lies the best chance of breaking the Peronist hold on Argentine politics.

A moderate if rather shy speaker in interviews, the portly Sr Alfonsín grows charismatic before large crowds. His eloquent delivery is in the best tradition of his Party, which has produced a long line of intelligent leaders, among them four Presidents since 1916.

Sr Alfonsín holds his audience spellbound with more than just his use of words. Behind his delivery, however, is an outgoing plan of action, the clarity of which shines through the surrealism in which Argentine politics has been submerged for most of its history, in particular during the unprecedented events of 1982. "We must fight to make sure that the armed forces not only leave

government but that they never return," Sr Alfonsín told his audience on Tuesday.

Thirty years ago, Argentina was one of the richest countries in the world with the highest per capita income in Latin America and an educated and cosmopolitan civilian population which ensured a relatively stable political life. Just why this country has slid to a state of almost permanent financial and political chaos is the question which has baffled most observers for a very long time.

Sr Alfonsín thinks he has found the root of the problem in the armed forces. A long and complex process of exploitation by different interest groups has transformed the military from a professional force into a body which regards itself as the sole guarantor of the country's political life.

Sr Alfonsín strongly criticises the army which paved the way for more recent military intervention and the Argentine military for invoking the concept of "national security" to repress fundamental civil liberties and corrupt political and economic life.

"The military must stop acting like an army of occupation," he says. His anti-militarism has undoubtedly captured the public mood in the post-Falkland period, and it is his firm belief that the popular mobilisation he is helping to generate will eventually force the country's military rulers to give up power.

Another issue which has enhanced his popularity is the current human rights campaign. Sr Alfonsín has been outspoken in his demand for a full investigation into the fate of thousands of Argentines who disappeared following the 1976 coup, and for the judgment of those responsible.

To say Sr Alfonsín's public attitude matches his political opportunism—some of his enemies maintained—is to ignore the consistency of his principles. A one-time student leader, Sr Alfonsín formed *Renovación* 15 years ago. In Sr Alfonsín has shaped *Renovación* into what he describes as "a democratic national movement which seeks to resolve the past conflict in Argentina between populism and democracy." Sr Alfonsín's supporters describe him as both non-authoritarian and populist.

Early on in the Falklands war Sr Alfonsín was almost alone among the country's politicians in dismissing the junta's decision to invade the islands.

If next year's elections take place there will be potentially 5m first-time voters, about 30 per cent of the electorate, and Sr Alfonsín is clearly banking on this support to close the gap which still separates the Radical Party from the Peronists.

## WORLD TRADE NEWS

## UK invisible sales climb to record nine month high

BY MAX WILKINSON, ECONOMICS CORRESPONDENT

BRITAIN'S private sector invisible overseas earnings reached a record total of £20.8bn for the first nine months of the year, 9 per cent above the level in the same period last year, according to the latest figures out yesterday.

The figures, from the Committee on Invisible Exports, show that the invisible earnings for the third quarter of this year were £7.1bn, slightly lower than for the second quarter.

The private sector surplus after deducting taxes was £1.576bn for the third quarter and £4.36bn for the first nine months of the year. This compared with a private sector surplus of £4.58bn for the first nine months of last year.

After deducting the deficit on Government invisible transactions, the overall surplus in the third quarter was £6.04m and £1.78bn for the first nine months of the year.

The committee says that private sector service industry receipts held up well overall for the third quarter. There was a small decline in sea transport earnings, with a decline in dry cargo and tanker earnings, and earnings from tourism also declined.

However these reduced earnings were more than offset by increases in receipts from financial services, particularly from insurance business, and also from civil aviation.

Interest profit and dividends received from overseas during the third quarter by the private sector and public corporations were 5 per cent less than in the previous quarter at £4.35bn, mainly as a result of lower interest payments to UK banks from borrowing in foreign currencies.

There was little change in private sector payments overseas for services but a slight increase in the third quarter at £1.78bn for the first nine months of the year.

Western manufacturers are fighting for lower confectionery tariffs, Paul Cheeseright reports

## Japan's chocolate wall comes under attack

CHOCOLATES are not the ammunitions of trade wars, but they provide the pellets of aggravation, especially when they become part of a general belligerence in relations.

In fact, the Japanese chocolate confectionery tariff level is higher than that imposed by any other country in the industrialised world. But the market is enormously attractive for its growth prospects. So Western manufacturers, like those in other sectors, are putting pressure on their governments to urge Japan to lower the tariff.

The chocolate confectionery issue has become part of the series of disputes between the EEC and Japan. This had led the EEC to charge Japan, within the General Agreement on Tariffs and Trade (GATT) dispute procedure of impairing benefits that ought to accrue to the EEC.

And, to a large extent, dissatisfaction about the Japanese chocolate tariff embraces the widely held perception in the West that Japan's domestic market is not as open as it should be for such a powerful exporter.

Since last April, when Japan accelerated a planned reduction, the chocolate confectionery tariff has stood at 31.9 per cent,

an apparent anomaly for a country whose average industrial tariff is 3.5 per cent. Behind this tariff wall, Japanese manufacturers hold 98 per cent of the market, with five leading companies—Meiji, Ezaki-Gilco, Lotte, Morinaga and Fujiya—holding 88 per cent.

According to analysis prepared by Bucher, Williams and Harrop, London lawyers for the Cocoa, Chocolate and Confectionery Alliance, which groups together the UK companies in the industry, European manufacturers can match the Japanese market's success only if they climb over the tariff wall.

But what they cannot do is to match the Japanese if as well they have to mount the expensive publicity and marketing campaign, essentially to establish a footing, rather than a toehold, in the market. Thus, it is argued, the high tariff enables the large Japanese manufacturers to maintain their massive media advertising advantage over imported product.

Industry appeals for a lowering of the tariff below 31.9 per cent have been unavailing. Lord Mottisone, the export secretary of the Alliance, returned home after a visit to Tokyo last month with the impression that little change would be forthcoming before a

Three days of trade consultations between Japan and the European Economic Community ended yesterday with the EEC demanding Japan open its markets to more European goods, foreign ministry officials said, AP reports from Tokyo.

The officials said the EEC's demands included removal or reduction of import tariffs on 81 items, simplification of import procedures on several items, and voluntary restraint on export of items that are likely to cause "significant problems."

Japanese revision of its internal tax and subsidies structure. But Bucher, Williams and Harrop say that unless the matter is resolved during the EEC's current trade dialogue with Japan, there would be little hope of European penetration of the market.

The European Commission has asked for the tariff to be reduced to 17 per cent, but there is a feeling in the UK that this request is not stiff enough: 5-10 per cent would be more appropriate.

A head of political steam is building up on the issue. Mr Anthony Grant, the Conservative MP for Harrow Central, and chairman of the Tory backbench Trade Committee, will, as he put it, "try to put some stuffing in the Government to put pressure on for a lower tariff."

He thinks, too, that a separate issue should be made of the chocolate tariff in the sense that it should be drawn out from the

tonnes in 1960 to 122,560 tonnes in 1981.

Per capita consumption, though, is still small compared with that of the West. If the Japanese consume as much per capita as the British, the size of the market would climb over the longer term to 785,000 tonnes.

To some extent, foreign companies could, in any case, under present conditions share in the growth accompanying the Japanese switch to Western tastes. The major members of the Alliance, like Rowntree, Cadbury and Mars are already present on the market with either their own ventures or licensing arrangements.

It is the smaller and medium-sized Japanese companies which are under the most acute handicaps, lacking the resources to put into the joint ventures which Lord Mottisone was advocating. Significantly, Lord Mottisone, with him representatives from companies like Benetton (Mayfair) and Tobler Suchard.

Recently UK exports to Japan have declined, while exports from the protected Japanese industry to areas like the Middle East have increased. Total UK sales to Japan have been running at 1,700 tonnes out of an EEC total of 2,700 tonnes, and that is 0.4 per cent of the industry's world exports.

PEKING PLANS 'SPRING OFFENSIVE' AGAINST EEC

## China to take tougher line on textiles

BY TONY WALKER IN PEKING

CHINA, which has the world's fastest growing textile industry, has signalled it intends to adopt a tougher stand in negotiations over access to markets in the European Economic Community.

Officials of the China National Textile Import and Export Corporation are planning a "spring offensive" for scheduled discussions early next year on a new three-year textile agreement with the EEC. The first was signed in 1979.

A China Textile official has told the English language China Daily that China would try to persuade the EEC to relax restrictions and to increase quotas. "We have made scant progress in drawing up fair trade rules for textile exports," the official said.

The Chinese are already proving more assertive in their discussions with the U.S. over access for their textiles to the American market. China's textile exports to the U.S. last year reached about \$590m (£369m) out of total U.S. textile imports of about \$1.6bn.

China's textile exports to the EEC in 1981 were worth about \$300m. Officials are singling out Britain for special criticism, saying British policy is particularly restrictive.

The level of British imports in some basic items, those where there is no mandatory quota but instead tacit agreement to keep quantities at traditional levels—was "ridiculously low" by standards of international trade, one official is quoted as saying.

British officials in Peking point out that Chinese textile imports have increased sharply in recent years. In the eight months to the end of August this year, \$71.3m worth of Chinese textiles were exported to Britain compared with \$66.8m in the corresponding period last year.

In the case of West Germany, also a target for criticism, Chinese textile imports grew by 70.8 per cent in 1981 compared with the year before, and by 34.3 per cent in the first six months this year over the corresponding period last year.

The value of Chinese textile exports to the German market, which absorbs about 50 per cent of all China's textile exports to the Community, reached about \$156m last year.

In the first six months of this year, the value of Chinese textile exports amounted to some \$83.4m.

France, the other main importer in the community of Chinese textiles, last year took \$53.1m worth compared with \$57.4m in 1980.

Growing Chinese assertiveness on the textile issue reflects China's greater preoccupation these days with trade issues, now that they are seeking to increase foreign business.

Chinese officials have been active recently at international economic forums such as the GATT meeting, and are likely to become more assertive in pushing China's commercial interests.

## Bonn to boost gas-from-coal technology

By James Buchan in Bonn

THE BONN Government has decided to make its first grant from a DM 1bn (£235m) fund to further the development of coal gasification technology in West Germany.

The Economics Ministry announced yesterday that Bonn would make available DM 231m over the next three years to Klockner Kuhlmann, a 50-50 joint venture between Klockner-Werke, the diversified West German steel concern, and CRA, the Australian raw materials giant.

The public money, administered by the Economics and the Research Ministries, will make possible the construction of a DM 750m coal-gasification plant to meet the entire need for gas of Klockner's Bremen steelworks.

## Poles need import rise to service debts

By David Buchan

POLAND needs to import an extra \$1bn (£625m) worth of Western goods and commodities next year if it is to improve its economic capacity to service even rescheduled foreign debts, according to a senior Polish trade adviser visiting London.

If or when Western government sanctions on Poland are lifted, the Jaruzelski regime intends to press for a resumption of Western export credit to Poland and to link it with any interest payments by Poland on the so-called unpaid 1981-82 debts owed to Western governments, the adviser said.

The same link was successfully negotiated by Poland in its rescheduling agreement this autumn with Western commercial banks. The banks are being paid interest on their loans maturing this year, but they agreed to recycle part of this—\$500m—back into Poland in the form of short-term trade credit.

The latest estimate is that Poland will have a \$1bn-\$1.2bn hard currency trade surplus this year. But this is largely offset by a up on interest payments to Western banks, and would be totally eaten up if, after the end of sanctions, Poland starts paying interest to Western governments under a future rescheduling agreement.

The trade adviser produced the following calculation to back his Government's plea for resumed Western trade credit. If Poland were to import an extra \$1bn next year and an extra \$1.5bn in 1984, he said, the country would be able to service its commercial debt properly by 1985 and its debt to Western governments by the late 1980s.

## Brown Boveri wins \$45m Abu Dhabi order

BROWN, Boveri Cie of West Germany and its Swiss majority parent company, BBC AG Brown, Boveri & Cie, have won a DM 180m (£45m) order to build a broadcasting centre in the Gulf emirate of Abu Dhabi. James Buchan reports from Bonn.

## Japan's shogun in the shadows

By Jurk Martin in Tokyo

THE popular view in Japan is that Mr Yasuhiro Nakasone, the Prime Minister, is deeply beholden to, and may even be in the hip pocket of, Mr Kakuei Tanaka. Certainly Mr Nakasone's Cabinet and senior party officials posts are heavily laden with associates of the man who was Prime Minister of Japan from 1972 to 1974.

In trying to divine the likely policies of a Nakasone Government, therefore, it would appear logical to examine what Mr Tanaka stands for. After all, he was a genuinely distinctive political leader, who seemed to power on a wave of expectation, and who ran a busy government before being shot down by scandal (not incidentally, the Lockheed affair for which he is still on trial but whose revelations did not emerge until later).

Yet today, a thorough probing of Japanese political opinion leads to virtually no perception of what Mr Tanaka represents in terms of policy. He is, quite simply, associated with the execution of power. An obvious international comparison is with Mr Edward Heath, who also left office in 1974 and who now is Mr Tanaka's precise opposite: Mr Heath is famous for his outer darkness to which Mrs Thatcher and his own strong views have consigned him. Without power, yet still associated with a definite strain of policy, Mr Heath is widely known as "the shogun in the darkness", still dwells in the back rooms of power, without formal office. Yet devoid of identity, yet school of political thought.

One of his severest intra-party critics is Mr Motoo Shima, the Liberal Democratic Party's chairman of the subcommittee on the Ministry of Defence. Mr Shima acknowledges Mr Tanaka's public reputation as a "doer" but alleges that he is motivated only by an acute sense of personal gain. "His policy stance is very liquid," Mr Shima says with half a wry smile, adding that though the Japanese defence industry is not presently very profitable, he would expect Mr Tanaka to jump on to the defence bandwagon were it to show signs of becoming so.

In an interview this week, Mr Shima foresees a potential crisis for Mr Tanaka if, or when, "desirable" Japanese goals conflicted with Mr Tanaka's personal interests. The pursuit of monetary gain, sometimes quite overt, is commonplace in Japanese politics. Problems seem to arise when the use, or pursuit, of money becomes excessive.

This is the nub of the political complaints against Mr Tanaka. They are often expressed in Japan with a frankness, as Mr Shima demonstrated, that would astonish foreign ears more attuned to conventional political niceties.

This was evident in the recent Liberal Democratic Party (LDP) leadership campaign when Mr Nakasone's three opponents were united by little more than opposition to Mr Tanaka's perceived influence. It is re-emerging less than a week into the Nakasone term in the form of speculation that the Prime Minister may call an early Diet election, despite calls for lower interest rates from some sections of the business community.

The central bank appears to be reluctant to change the rate, currently standing at 5.5 per cent for two reasons. The first is a desire not to undermine the recent strength of the yen in foreign exchange markets, and the second has to do with interest rate differentials in the domestic Japanese money market.

Funds have been moving rapidly from bank deposits into the bond market recently, reflecting a wide differential between deposit rates and bond yields. Bank deposit rates would normally be expected to come down, in line with any cut in the Bank of Japan's deposit rate, but it looks as if for the

## Pretoria troops kill 37 in Lesotho raid

BY J. D. F. JONES IN JOHANNESBURG

SOUTH AFRICAN troops killed 37 people—30 members of the African National Congress and seven women and children caught in the crossfire—when they raided houses in Maseru, the modest capital of independent Lesotho, in the early hours of yesterday morning.

The raid was the first into Lesotho, a tiny mountain enclave inside South Africa. Lesotho is an independent state, although dependent economically on South Africa.

The South African defence force, in justification of its raid on Maseru, yesterday issued details of a chain of sabotage incidents inside the Republic for which it claimed, the ANC command structure in Lesotho was responsible.

General Constand Viljoen, of the army, said the ANC had been planning a Christmas campaign of "deeds of terror" inside South Africa and the homelands, and that "well-

trained terrorists" had recently moved to Lesotho from elsewhere in southern Africa to carry out this plan.

"The South African Government repeatedly warned governments of all neighbouring states not to allow terrorists to use their territory and facilities as a springboard against South Africa."

Gen Viljoen also referred to a relationship between the ANC and the Palestinian Liberation Organisation.

This Israeli-style transborder attack comes in a week of delicate ministerial talks between Lesotho and South Africa over the possibility of a Namibian settlement, and at a time when Mozambique has been claiming the South Africans have been building up troops on the frontier.

A South Africa's defence force yesterday declined to give details of the raid on Maseru except to deny official reports

from Lesotho that soldiers were brought in by helicopter.

The raid was strongly condemned by the Lesotho Government and by the ANC headquarters in Lusaka, both of which referred to Lesotho's role as a haven for refugees.

Lesotho yesterday accused South African troops of acting in collusion with the outlawed Lesotho Liberation Army (LLA) to murder women, children and refugees in their pre-dawn raid.

Mr Charles Malapo, Foreign Minister, said the kingdom had been greatly hurt by what he called the brutal killings of Lesotho citizens and refugees. The ANC denied the homes they attacked were ANC headquarters. It condemned the raid as a "cold-blooded massacre," and declared the ANC had no intention of stopping its fight against white rule in South Africa.

Britain publicly condemned the South African raid into Lesotho as "a flagrant violation" of sovereignty.

A Foreign Office statement said: "We are still awaiting a full account of this incident, but we condemn this flagrant violation of Lesotho sovereignty and greatly regret the loss of life involved. We deplore violence from any quarter in the search for solutions to the problems of southern Africa."

Lesotho has internal problems of its own which have become entangled with South Africa's security priorities. The Prime Minister, Chief Leabua Jonathan, effectively seized power in 1970 when he faced electoral defeat at the hands of the Basutoland Congress Party led by Mr Ntsu Mokhehle.

Chief Jonathan was then favoured by the South African Government, while Mr Mokhehle was sympathetic to the ANC.

Mr Mokhehle fled the country and in 1978 formed the LLA

which has been waging a mini-civil war against Chief Jonathan's regime for three years.

In the last year, the campaign of sabotage, mortar raids and landmines has been intensifying. Ministers and their families have become targets and Chief Jonathan's Lesotho paramilitary force has found it difficult to seize the initiative.

The irony is that in the meantime Mr Mokhehle is widely believed to have won the secret support and shelter of the South Africans, while Chief Jonathan has fallen out with Pretoria because the South Africans insist he is giving shelter to ANC guerrillas who use Lesotho as a base to plan and execute their missions.

It was Chief Jonathan's capital which was raided by his old friends the South Africans yesterday. Mr Mokhehle was in the country and in 1978 formed the LLA

to operate across the border between the ANC and Mr Mokhehle. For instance, the ANC believes that the South Africans help the Lesotho exile movement in return for intelligence about ANC exiles inside Lesotho.

Recent public warnings from South Africa have been issued not to Lesotho but to Mozambique. Mr P. W. Botha, South Africa's Foreign Minister, recently published a message bluntly warning of the consequences of allowing the ANC to operate across the border from Mozambique bases.

## Begin stays firm over Beirut massacre

By David Lennon in Tel Aviv

MR MENAHEM BEGIN, the Israeli Prime Minister, has responded to warnings that he could be harmed by the findings of the commission of inquiry into the Beirut massacre by reiterating that, in his opinion, "there were no grounds to assume that atrocities would be perpetrated against the civilian population."

The judicial commission cautioned the Premier and eight other officials two weeks ago that its findings could adversely affect them. They were offered the opportunity to give further evidence or cross-examine witnesses.

Mr Begin has said he will call fresh elections if the commission's final report directs even the slightest blame or shadow of criticism against him.

The commission warned Mr Begin that he might be harmed if it found that he had ignored the danger of acts of revenge by the Christian Phalangist forces which Israel allowed into the Palestinian refugee camps in September. Such an omission would be tantamount to "non-fulfilment of a duty," the commission said.

But the Premier decided not to reappear before the inquiry board. He rested his case with a letter, made public yesterday, in which he claimed that "it was never imagined that the Lebanese forces (the Phalangists) . . . would perpetrate a massacre."

In his letter, Mr Begin also notes that the references to the danger of acts of revenge made to the Cabinet by the Chief of Staff and the Housing Minister were not sufficiently pointed to have aroused any concern in the Cabinet.

The commission issued the warnings because the evidence given by other witnesses had cast doubt on the testimony of the nine people notified.

## Zimbabwe calls for pay restraint

BY TONY HAWKINS IN HARARE

ZIMBABWE'S Finance Minister, Bernard Chidzero, yesterday called for restraints on wages and public spending and consumption to bolster Wednesday's 20 per cent devaluation of the Zimbabwe dollar.

Outlining policies that will please the International Monetary Fund and international banks, Dr Chidzero said Zimbabweans must "curtail demand and consumption" and match these with earned resources. "In short, we cannot live beyond our means," he said.

The minister also promised a more flexible exchange rate system in the future, saying that rates would be fixed by reference to trade weightings, a company official warned yesterday that devaluation on its own would not solve all its problems.

Devaluation would have both its costs and benefits but to be successful it would have to be backed by "austerity" measures.

The minister ruled out the anticipated and of year rise in minimum wages, saying these would be reviewed in the second quarter of 1983 to see what increases might be sustainable from July 1, 1983.

Dr Chidzero believed that consumer prices would rise by only 3 per cent to 5 per cent as a result of devaluation, but industrial and bank economists estimate a rise of about 6 per cent to 7 per cent.

Industrial business reaction has been mixed. The mining industry, which stands to benefit most, is pleased but a company official warned yesterday that devaluation on its own would not solve all its problems.

Industry believes devaluation might ease the process of obtaining a loan from the IMF but commerce is worried about the impact of devaluation on prices of imported materials and capital equipment.

In agriculture the reaction was mixed with the tobacco industry pleased at the move. But the Commercial Farmers' Union warned that import quotas levels the number of new tractors available would fall from 600 to 500 a year. Production costs would rise by 4 per cent to 5 per cent.

The most immediate increase is likely to be in petrol prices which will have an adverse impact on cost levels throughout the economy. Devaluation, however, should speed the loan of £170m which Zimbabwe is seeking from the IMF.

## Mozambique oil refinery attacked

By Our Foreign Staff

GUERRILLAS fighting against the Mozambique Government yesterday claimed responsibility for sabotage of a large oil storage depot in Beira, cutting supplies of oil to landlocked Zimbabwe, already in the grip of a serious fuel shortage.

Fires broke out early yesterday morning at the Beira Petroleum Transit Terminal at the port, but the extent of the damage is still not known, according to a BP official in London.

An official of the Mozambique National Resistance Movement, which the Mozambique Government claims is backed by the South African Government, said in Lisbon that the attack was intended as a warning to Zimbabwe

## Angola leader takes emergency powers

BY QUENTIN PEEL, AFRICA EDITOR

PRESIDENT Jose Eduardo dos Santos of Angola is to assume sweeping emergency powers to cope with crippling economic problems and a deteriorating security situation in the centre and south of the country.

The unanimous decision was taken by the central committee of the ruling Popular Movement for the Liberation of Angola (MPLA), at the same time as a top-level Angolan delegation was talking to the South African Government about a possible ceasefire in the south of the country.

The Angolan move seems to be a clear recognition of the deteriorating economic and security problems in the country, which is fighting both South African troops along the southern border with Namibia,

and dissident UNITA guerrillas in the central and southern provinces.

President dos Santos's new powers, which were not specified, are needed to implement an emergency plan affecting "defence and security, the economy and the state apparatus," according to a report by Angolan, the official Angolan newsmagazine.

The move gives the President a freer hand to deal with the defence of the country, the introduction of economic austerity measures, and the possibility of a ceasefire with the South African troops.

Recent reports from Angola suggest that there has also been a sharp deterioration in security in the central highlands around Huambo and Bie,

## Kenya in talks on £100m IMF standby credit

BY MICHAEL HOLMAN IN NAIROBI

KENYA has concluded a 10-day round of negotiations with a visiting team from the International Monetary Fund which may lead to agreement on an urgently needed standby facility early in the new year.

The facility may be worth up to £100m, officials and Western diplomats believe, and will be subject to renegotiated ceilings on Government domestic borrowing, and an almost certain devaluation of the Kenyan Shilling.

The country is in the middle of what government officials describe as a serious financial crisis, marked by large balance of payments deficits and declining foreign exchange reserves.

An SDR 151.5m (£102m) 12-month standby IMF programme introduced in January was effectively suspended in August after the Government had drawn SDR 90m (£58.5m).

A further SDR 30m was due that month but was not forthcoming as a result of Kenya's failure to meet several performance criteria.

Meanwhile, the country's reserves, which stood at Kenya Shillings 1.9bn (£107m) at the end of September have further declined to Shillings 1.8bn, barely above the lowest level since 1976.

An IMF team was last in Nairobi in September, but on that occasion was not empowered to negotiate a resumption of the standby programme nor a new facility.

Senior Kenyan officials subsequently visited the fund's headquarters in Washington.

The August coup attempt, said to have cost £120m through lost tourist earnings, looting and capital outflows, has exacerbated the financial problems. Kenyan appeals for emergency aid have met only a modest response.

Potential donors held talks in London last month under the auspices of British Overseas Development Administration and a further private meeting of donors will take place in Nairobi on December 14.

These two sessions will be followed up early next year. A major factor in Kenya's difficulties is the increasing proportion of foreign exchange consumed by oil imports, which last year took up 57 per cent of non-oil export earnings.

Kenya's foreign exchange reserves, which stood at Kenya Shillings 1.9bn (£107m) at the end of September have further declined to Shillings 1.8bn, barely above the lowest level since 1976.

WELSH STOPPAGE 'WILL SPREAD LIKE WILDFIRE'

## Miners vote for strike

BY JOHN LLOYD, LABOUR EDITOR

SOUTH WALES miners yesterday voted for strike action from January 17 unless the National Coal Board steps up investment in the coalfield.

Mr Les Duffield, vice-president of the area branch of the National Union of Mineworkers (NUM) said last night that officials would attempt to spread the strike to all UK coalfields and would also seek support from other unions in South Wales.

The area executive committee has asked for a meeting with Mr Norman Siddall, the NCB chairman, but this is unlikely to be granted. Even if it is arranged, the call for further investment appears certain to fall on deaf ears, because of a deteriorating market for coal.

Mr Arthur Scargill, president of the NUM, said the strike would "spread like wildfire" through the other coalfields. Speaking after a meeting of the union's executive committee yesterday, he said: "Our members are no longer prepared to accept the National Coal Board's continuing plans for closure."

The executive has given the NCB until the end of the year to produce confidential documents on colliery costs, prepared for the inquiry into the industry which is now being completed by the Monopolies and Mergers Commission. If it does not,

the NUM will withdraw from all consultative bodies, most importantly from the colliery review procedure, under which the NCB attempts to get agreement for colliery closures.

However, the board has already told the union that it will not hand over the documents. A letter to Mr Scargill from Mr John Mills, the deputy chairman, makes clear that, while the board is anxious to continue its statutory duty of consultation and provision of information, it will not disclose matters it holds to be in commercial confidence.

The NUM has set two time fuses for early next year. It has now filed a call for more investment and the sinking of 40 new pits to its refusal to agree to any closures except on grounds of complete exhaustion - demands which run directly contrary to the board's plans for cost cutting and redundancies.

Mr Scargill said the union would be submitting a "comprehensive" document to the House of Commons Select Committee on energy, calling for extra investment. He said he expected to be called back before the committee, and possibly to a House of Lords committee as well.

● The NUM executive has voted to support the planned "People's

March for Jobs" from Glasgow to London, in defiance of a decision from the Trades Union Congress (TUC) that it should not take part. The union will attempt to re-open discussion on the march at the TUC General Council meeting later this month, where it will have the support of the Transport and General Workers' Union and others.

● Delegates representing 5,000 lorry drivers in South Wales meet today to draw up plans for industrial action in the new year if employers do not reconsider their "zero" pay offer.

Leaders of the Transport and General Workers' Union (TGWU) are worried about the nil and very low pay offers being made across the country in the recession-hit hire-and-reward sector of road haulage.

Twelve of the 21 regional negotiations are under way so far. Employers have offered nil increases in six of them, and in the others offers are no higher than 2.5-3 per cent of basic pay.

Employers believe that the fear of further redundancies makes a repeat of the national strike of 1979 unlikely. The industry has seen three years of recession and liquidations, and is in a much worse state than even a year ago.

## Minet may request injunction to block moves by Lloyd's

BY JOHN MOORE, CITY CORRESPONDENT

MINET HOLDINGS, the troubled insurance broking group at the centre of a Department of Trade investigation and a City of London Police fraud squad inquiry, may take legal action against the Lloyd's authorities next week if the committee of the insurance market proceeds with plans to stop a dozen Minet underwriting syndicates from trading.

Lloyd's committee has been applying pressure on Minet in an attempt to persuade the company voluntarily to suspend the underwriting operations of the syndicates. This is in the wake of a series of allegations that there have been irregularities by former senior underwriters of the Minet company, PCW Underwriting Agencies.

If Minet does not co-operate with the committee, Lloyd's is understood to have threatened to revoke the licence of PCW for trading within its community.

If Lloyd's acts to revoke the licence, and this will be considered at a committee meeting today and on Monday, Minet is likely to seek an injunction against Lloyd's and a review of the matter in the courts.

If Minet were to take legal action, it would be the first time that a major broker - Minet ranks as the

fifth largest in the UK - will have started litigation against the Lloyd's authorities.

As the volume of internal inquiries has mounted, the Lloyd's authorities have appointed two "supremos" in an effort to co-ordinate all the investigations.

They are Mr Peter Millett, QC, and Mr Nigel Holland of accountants Ernst and Whinney. They have been appointed as a committee of inquiry to take direct control of the investigation into the affairs of Alexander Howden, Fosgate and Denby (the agency company of the suspended underwriter Mr Ian Fosgate), PCW, WMD (an associate company of PCW) and other related agencies.

The inquiry team is to try to discover the extent of secret involvement of directors and employees with reinsurance arrangements carried out for Lloyd's syndicates and how much money might have been diverted for the personal benefit of Lloyd's working members.

Witnesses are to be called and Lloyd's has told the team to treat the matter with urgency.

## Compeda consortium backed by Wimpey

By Ray Snoddy

WIMPEY, the UK construction company, said yesterday it would be prepared to support with money a British consortium which is trying to keep important computer-aided design technology in the UK.

The technology - product design management system (PDMS) - has been marketed and partly developed by Compeda, the computer-aided design company at present being sold by the Department of Industry.

An effort is being made by Isopipe, a Nottingham computer consultancy with original interests in PDMS, to put together a consortium of British users of PDMS to prevent its sale to American rivals. Mr Ray Flint, commercial director of Wimpey, said his company would be prepared to put up money to back such a consortium.

As the first commercial user of PDMS, Mr Flint said Wimpey wanted to maintain continuity of access to the experts on the system.

He said he was dismayed at the possibility that once again technology in which Britain had a lead would be lost to American financial and commercial expertise. Wimpey has used PDMS to design complex North Sea platform modules.

## Thatcher loses chief of Civil Service efficiency office

BY ROBIN PAULEY

SIR DEREK RAYNER, assigned yesterday as head of the unit which carries his own name, and which has been the Prime Minister's main weapon in her war against waste, inefficiency and bureaucracy in Britain's Civil Service.

Sir Derek has told Mrs Thatcher that in view of his increasing commitments to Marks and Spencer, the stores group, he must give up the leadership of the unit, although he will remain a personal adviser to the Prime Minister. When Mrs Thatcher appointed him to the post, unpaid post in May 1979, Sir Derek was joint managing director of Marks and Spencer. He was recently appointed joint vice-chairman of the company.

Sir Derek's unit will now be run on a similar format, by Mr. C. Priestley, his chief of staff since 1979. He is a 47-year-old career civil servant who was previously under-secretary responsible for management reviews at the Civil Service Department.

Mrs Thatcher has been enthusiastic in her praise for Sir Derek. He will have been responsible for 130 investigations in departments and six multi-departmental reviews by next April. These have all tried to improve efficiency and effectiveness of specific government jobs, reduce paperwork, and change

Whitehall attitudes towards management and improving efficiency.

But Sir Derek has become increasingly frustrated recently at the ability of government departments to block the introduction of his proposals for savings once he has identified them. So far, his group has found once-and-for-all savings of £26m, plus annual potential savings of £274m. But recommendations for savings of only £170m a year have been adopted.

Sir Derek's time has not been without controversy. He became deeply embroiled in a fierce row with Civil Service officials when he proposed that the Civil Service Department (CSD) should be disbanded, a battle which he lost only to see his ideas put into action later when the CSD was suddenly and swiftly killed off at the end of last year.

There was also strong political pressure over his recommendations about paying pensions fortnightly and child benefit monthly or fortnightly as part of a package to streamline benefits payments at a saving of £50m a year. The Government has accepted the pensions and child benefit changes after exceptional pressure on behalf of subscribers.

## Local councils increase loan board borrowings

BY ROBIN PAULEY

LOCAL authorities have increased their borrowings to more than £1bn from the Public Works Loan Board (PWLB) in the last quarter.

The PWLB terms on fixed rate loans have become very attractive to council treasurers as interest rates have fallen. The loans have been the commercial banks and brokers. In contrast, the variable rate loans introduced by the PWLB have hardly been taken up at all, contrary to the Treasury's hopes.

Figures published by the Treasury yesterday show that between April 1 and November 30 this year local authorities borrowed £1,353bn from the National Loans Fund compared with a repayment of £798m over the same period last year.

In November alone £433m was borrowed compared with a repayment of £94m in November last year.

The central government's total borrowing requirement in November was £1,550m. This took the cumulative total for the central government borrowing requirement in 1982-83 of £8,380m.

The Budget forecast was for a revenue increase in 1982-83 of 3 per cent over 1981-82. Consolidated 1982-83 to £5,480m, compared with a fund expenditure in the same eight full-year forecast of £5,280m.

The total appears to be high even after allowing for the fact that De-

ember traditionally provides high inflows from payment of petroleum revenue tax.

November's borrowing figure cannot be compared with the previous November's £217m because of the severe recession in 1981.

Revenues into the consolidated fund, the biggest component of official receipts, were £50,080m in the eight months to November. This was 18 per cent up on last year when revenue was depressed by the effects of the dispute.

The Budget forecast was for a revenue increase in 1982-83 of 3 per cent over 1981-82. Consolidated 1982-83 to £5,480m, compared with a fund expenditure in the same eight full-year forecast of £5,280m.

The total appears to be high even after allowing for the fact that De-

## GRE in £39m deal with Hambro Life

BY ERIC SHORT

GUARDIAN Royal Exchange Assurance (GRE), a leading UK insurance composite group, surprised the financial market yesterday by announcing a £39m deal with Hambro Life Assurance.

This is the amount GRE is paying Hambro Life for 12m new shares at 325p per share - an issue that will give GRE about 10 per cent of the enlarged equity of Hambro Life.

The deal has the approval of Hambro Life's major shareholder, the merchant banking group Hambros. This will result in Hambros' stake falling from 43 per cent to 37 per cent of the equity.

Hambro Life was founded just over 11 years ago by Mr Mark Weinberg. In that period, funds under management have grown to more than £1.5bn. This growth has been financed internally. GRE, the second largest UK insurer, also has a substantial life insurance operation with world-wide assets of £2bn of which £1.2bn are in the UK.

Both groups are looking at overseas expansion of life insurance operations. The world-wide presence of GRE through its life and general insurance operations will provide the base from which to start.

## Unions reject 3% pay offer

BY PHILIP BASSETT, LABOUR CORRESPONDENT

LOCAL AUTHORITY employers yesterday offered leaders of their 1m council manual workers pay increases of 3 per cent - the lowest offer made so far in the public sector in the present wage round.

Union leaders immediately rejected the offer. The proposed increase is even lower than the 3½ per cent cash limit pay assumption the Government has set directly for its own employees in the Civil Service, but which it hopes will stand as an example in the rest of the public services.

Employers stressed that they were not bound by these pay assumptions, and emphasised the

serious financial position facing many local councils because of tight Whitehall control on local authority expenditure.

However, many members of the employers' side were prepared to increase the offer a little, to 3½ per cent, though this was not formally disclosed yesterday after the talks with the unions ended.

Both sides agreed to reconsider the claim and to hold a further meeting next month. Mr Charlie Donnet, secretary of the trade union side, said: "It was disappointing with the offer. It is nowhere near what we expect the final settlement to be."

The life of an exporter can have its worries. Nowadays, it seems the only safe assumption that an exporter can make is that in today's world nowhere is safe.

Companies in stable countries can fail just as easily as governments in shaky ones.

And violent, natural catastrophes can happen anywhere on earth, often bringing financial disasters in their wake.

This could be the reason why last year some 11,000 exporters insured their exports - and ensured

themselves a proper night's sleep - through ECGD. Last year, too, ECGD paid out over £300m in insurance claims.

An ECGD policy not only guarantees you up to 95% repayment if an overseas company or country should fail to pay for your goods or services.

It may also help you to obtain better rates of interest for export finance from your bank manager.

Last year, in fact, banks were lending to ECGD policy-holders at not more than five-eighths per cent above base rate.

Which not only meant "cash on shipment" but saved them money into the bargain.

Get in touch with us at ECGD soon if you're having sleepless nights over your exporting.

We can't reduce the risks of being in the export business.

But we can reduce the worries of getting paid.

**ECGD**

Export with confidence.

## THE MANAGEMENT PAGE

EDITED BY CHRISTOPHER LORENZ

## The contrast of two unions in recession

Brian Groom reports on the way Apex and ASTMS are coping with their current problems

CLIVE JENKINS and Roy Grantham could hardly be less alike. But the ebullient Welshman and the mild-mannered, moderate Brummie face an agonisingly similar problem — the impact of recession on the rival white-collar unions which they lead.

They are far from alone. Trade unions have not only had the dispiriting task of defending workers faced with redundancy, most have also suffered the financial stress of falling membership. Unemployment has cut the TUC's strength by more than a tenth. Unions consequently face cost-cutting decisions in the management of their own affairs—including staff cuts—uncomfortably similar to those of the commercial enterprises with which they deal. Jenkins' Association of Scientific, Technical and Managerial Staffs (ASTMS) and Grantham's Association of Professional, Executive, Clerical and Computer Staff (Apex) provide vivid examples.

Apex has kept its finances in the black, but lost more than a fifth of its members. ASTMS has lost fewer in proportion, but last year suffered a deficit of nearly £1m on its income and expenditure account. Neither experience is unique. But each illustrates the hard choices to be made, and the contrasting response of competitor unions disparate in character.

Both operate in the white-collar recruitment market, where trade unionism is at its most entrepreneurial. Witty and flamboyant, Jenkins used to thrive on his success in this cut-throat arena as self-styled organiser of the middle classes. In the white-collar boom of the late 1960s and 1970s, ASTMS grew more than sixfold to an officially claimed 491,000.

Jenkins is nothing if not spectacular, and his current difficulties have attracted as much publicity as his former successes—to the glee of rivals who have made much of them, particularly in the hard-fought battle for managerial recruitment. But the apocalyptic headlines have appalled Jenkins and his officials. "Our assets are very substantial. We are not going broke, and we are not panicking in any way," says Stan Davison, deputy general secretary. "We are trying to bring a few items under control which we should

be doing for business sense anyway."

Better management is something a few unions could learn, though not many would like to do it in the glare of such bad publicity. ASTMS officials have found this more bruising than the cash flow problem, with which they are gradually getting to grips.

The trouble began in 1981, when it was realised that projected membership growth of 6 per cent a year had turned into a decline of the same amount. More than 80,000 members have now been lost since 1980, and the current total is officially put at a little over 400,000.

## Influence

Other unions suspect that ASTMS inflates its membership for the sake of appearance and influence. Davison concedes that, like other unions, it has some 50,000 to 60,000 unemployed members still on the books but not paying subscriptions.

When the decline was identified, ASTMS was unable to move quickly enough into reverse. Savings were initiated in July 1981, including reduction

of its affiliation to the TUC, selective non-replacement of staff, fewer international visits and savings on conferences, but they were not an instant solution.

By the year end, the annual deficit was £905,518 after a surplus of £449,810 in 1980. While contributions from members fell from £8.48m to £7.96m, expenditure rose from £7.96m to £8.5m, and interest charges more than doubled to £515,841. Bank loans and overdrafts were over £4m.

ASTMS was committed to capital expenditures which increased its debt burden. It had bought new headquarters in Camden, North London, for £3m (and was refurbishing them for £1.5m) before vacated properties worth up to £1.7m could be sold.

To raise immediate cash, the National Executive decided on a levy of funds from branches which was carried out in December 1981. This however was mishandled. Some branches were levied greater sums than they possessed, there were delays in refunding them, and angry delegates at this year's annual conference tried (and failed) to force the executive's resignation.

Since then a concerted cost-cutting drive has got under way. It includes: modifying the 108 officers' inflation-linked pay deal; seeking a similar change for the 300-plus staff; asking the officers, who currently use Ford Cortinas as office cars, if they will take Escorts instead of the Cortina's replacement, the Sierra; rescheduling some debts; and introducing more detailed budgeting than has hitherto been used.

A voluntary redundancy and early retirement package is being negotiated with the officers and will probably be offered to the staff, although Davison dismisses as "rubbish" rumours that 80 will go.

The aim is to break even over five years. "All the indications are that we will do it," says Davison.

In the years when ASTMS was growing apace, Apex expanded more slowly (from 76,000 in 1966 to 152,543 in 1978), and some members wished that Grantham had a little of Jenkins's charisma. More recently, they have perhaps been glad to avoid the publicity ASTMS has attracted.

For a union faced with membership decline as steep as that of Apex, to avoid deficit

is a considerable achievement and a tribute to the astute, book-keeping qualities Grantham has nurtured. "We made our calculations in 1979 and took action in 1980 to staunch the blood-letting caused by the Government," he says.

Some decisions have been painful. Whereas ASTMS is determined that its redundancies will remain voluntary, Apex has made compulsory ones—only three—but this is an embarrassing move for a union. Heavy job losses among office staff in manufacturing, particularly engineering, have hit Apex squarely on the jaw. ASTMS has been shielded from some of the worst effects by its membership in stabler sectors, such as finance, and among senior technical staff still in demand.

Apex's membership fell from its 1978 peak of 152,543 to 122,639 by the end of last year. The rate of loss is slowing down after a 12.6 per cent decline in 1981, but the union will none the less end the current year with only 112,000 to 115,000 members.

The wonder is that Apex's rescue measures have not been more drastic. The crisis has been contained partly by allowing its annual surplus to shrink, and hoping for an economic upturn before it disappears altogether; this year's surplus is likely to be some £70,000 to £80,000, after £218,836 in 1981 and £326,218 in 1980.

Last year's contributions increased from £2.63m to £2.87m, while expenditure rose from £2.4m to £2.78m.

Falling membership and rising prices could have justified a 20 per cent to 25 per cent increase in contributions this year. But the annual conference, on the executive's advice, approved a rise of only 10 per cent—from 50p to 55p a week—because it was judged that members were receiving low wage increases.

To cope with the resulting shortfall in income, Apex has juggled its funds to make a little go a long way.

Costs have been trimmed all round, as ASTMS is now doing, and, of course, staff numbers cut, mostly by voluntary means. Whereas Apex once had 56 officials, by next year it will have 49. Office staff have come down by about 15 to 135.

But this decline has been slower than that of the membership. This illustrates an important constraint on unions; they are loath to wield the axe as freely as industry.

Apex's financial soundness in the face of heavy pressures is a triumph. But it is by no means very much a numbers game. ASTMS's expansion in the 1970s has given it a strong base in spite of its financial tribulations, but Apex's haemorrhage of members causes it to be much discussed as a merger candidate.

For the moment, Grantham is right when he insists that Apex's financial prudence has averted the need to be precipitated into an unwise amalgamation. "We are not in the process of just amalgamating with anyone. Until we get the right formula we are quite capable of surviving on our own."

The leadership's favoured option is to form a confederation, and for nearly three years Apex has been in talks with the General, Municipal Boilermakers and Allied Trades Union and the Electrical and Plumbing Trades Union. The three general secretaries recently decided to continue the discussions.

## Amalgamation

Grantham is pressing for a devolved structure, with each retaining its own executive and conference, but the other two are believed to favour something closer to full amalgamation. Agreement is some way off.

Apex's ability to stand alone would be strengthened if it could curb its membership loss. One strategy is to fight back by recruiting new members, which the union is doing in Rugby League, oil, electronics, computers, food, retailing and management. But that is difficult, and other unions—not least ASTMS—are fighting for their share.

Both Apex and ASTMS see signs that a membership decline in traditional areas may be slowing down, but neither is under any illusion that the period of painful readjustment is over. Grantham expects another 500,000 workers, mostly from manufacturing industry, to be unemployed by the end of 1983-84.

## Aid for innovation in industry

ALL OVER the industrialised world, manufacturing companies are desperately looking for ways of replacing their declining businesses with new products. But many are caught in a double bind. The most obvious sources of ideas—a combination of market research and development effort—have all too often already been slashed back under the pressure of recession. And in any case, internal R and D seldom offers a shortcut to new product development—rather the reverse.

Short of a set of risky acquisitions—or maybe as a valuable complement to them—the only option is to license someone else's ready-made products, or at least their well-developed technology. In other words, follow the lead of the Japanese, and to some extent the Germans. More and more U.S. and British companies, who used to rely proudly just on their internal R and D, are trying to do just that.

The trouble is, few of them know how to go about it. And of those that do, almost all find the process painfully slow. John Goddard, a former ICI executive who has spent the past two decades as a technology transfer specialist, says most companies take a year just to find out what is involved in locating new products. They then write to a batch of individual companies, particularly in America, to find out whether there are any suitable developments they could license. At the end of a further year they have still generally failed to produce any projects of value.

In the company of three equally experienced and ambitious colleagues, Goddard is setting out to change all that, and in the process take on a task which many people, including a British Cabinet advisory committee, have argued—but to no avail—is a government responsibility.

By establishing a Centre for Innovation in Industry, which will offer a wide range of information and advisory services, Goddard and Co (in the form of Bingham Dore, Brian Locke and Leonard Cotterell) aim to help companies in Britain, whether large, medium or small, to speed the time-scale up to just six months; to take much of the slog out of

the search; and—most important—to end up with at least one viable and promising project.

The CII, as they have inevitably dubbed their branch, will also offer contacts and assistance for the rest of the innovation process: R and D itself, patenting, design, engineering development and marketing. At the CII's core will be its own directory and databank, plus access to two others: the British Ideas and Resource Exchange (Irex), and the U.S.-based Dvorkovitz network, which claims to be the world's largest databank of licensable opportunities.

The new venture has already received promises of financial backing from Prudential Assurance, and Gray Dawes, the Innescape Group's merchant bank. Their injection of £25,000 each is conditional on CII attracting at least 70 sponsoring member organisations from the 1,000-plus leading British companies whose chairmen or chief executives are now in the process of being approached.

## Catalyst

Even before the launch got under way—requesting £1,500 from each sponsoring member organisation over four years—three companies had agreed to join: Shell UK, Albright and Wilson, and Associated Octel. Provided enough of the 1,200 companies agree with Prudential's executive, Dr Derek Allam, that CII can play a valuable role as "a catalyst in the innovation process," the organisation will then go on to recruit several hundred ordinary members by the end of next year. Annual subscription rates will be of the order of £250 for medium-sized companies and £100 for small firms, with large organisations paying rather more.

Fees for some of CII's specific services—but by no means all—will be levied in addition, including a discount on access to the Dvorkovitz databank. "Centre for Innovation in Industry, the London Science Centre, 18 Adam Street, London WC2H 6AH. Tel: 01-530 3258/339 4901.

## THE UK SECURITY INDUSTRY

## The burglar alarm business: when crime can pay

By Dominic Lawson

IF CRIME is one of Britain's few remaining growth industries, crime prevention seems likely to follow the same upward trend. The manufacture, distribution and installation of intruder alarms, especially for the household market, is a sector in which many companies appear to be doing well—even in the depths of the recession.

The intruder alarm sector is estimated to have doubled in size over the past five years to reach an annual turnover of more than £100m (although on an inflation-adjusted basis the growth is less dramatic). At the same time it has steadily increased its share of the total security market. To sustain this growth the alarm companies have been increasingly turning their attention to the residential market.

High risk areas such as banks and jewellers are very mature markets, while other commercial premises are also well-developed territory. But only about 500,000 British households are protected by any form of alarm.

According to Mr Bob Tiley, of Automated Security, one of the market leaders, "the growth is all on the residential side of the business. The commercial end of the market is very flat." Mr Gerry McNamara, chairman of A & G Security

Electronics, says: "A few years ago about 10 per cent of our installations were residential. Now the figure is around 70 per cent."

The stock market is having something of a love affair with the alarm companies. Chubb and Securitor—whose interests range over the whole security systems field—have long been quoted companies. But the past few years have seen the arrival of companies solely manufacturing intruder alarms. These include: Automated Security, Security Centres, Security Tag, and A & G Security Electronics, whose shares are among the most highly valued in the electrical sector.

Automated Security has seen its profits grow at an annual compound rate of 36 per cent over the past five years as it has expanded its share of the intruder alarm market to an estimated 15 per cent. According to Jordans, the market research organisation, this makes it joint market leader with Chubb, whose share is believed to have fallen from the 20 per cent held in 1976. Jordans reckons that Securitor is in third place with an estimated 11 per cent share.

Jordans stresses the "competitive nature of a growing market in which no company is dominant." Although this has encouraged a number of major new entrants, two recent examples—Rentokil and Doulton

Hugh Routledge

Glass Industries—have pulled out only this year.

Mr Robert Brown, Doulton's managing director, views the experience as "an interesting experiment... which we never want to repeat."

But there are many other companies keen to join the battle. Brigadier Alan Needham, director-general of the industry's regulatory authority, the National Supervisory Council for Intruder Alarms, says: "I get lots of

queries from market researchers—people are queuing up to buy their way in."

RMC—formerly Ready-Mixed Concrete—has diversified recently into the alarm business—its first venture into the electronics field. "We see the area of security alarms as a profitable growth area. I wouldn't like to guess how many security companies we have acquired in the past couple of years," says Mr Harvey Taylor, a senior executive at RMC.

Brig Needham says that alarm installations by his council's members—the industry's most established companies—have been growing at around 8 per cent in volume terms this year compared with 1981.

Nevertheless, the expansion is nowhere near keeping up with the rising rate of burglaries. For example, last year council members' installations—at 34,000—showed no growth compared to 1980. Yet this was a year in which thefts from

homes cost insurance companies £100.7m, compared with £75.6m in 1980 and £48.8m in 1979, according to the British Insurance Association.

The association says that the cost of thefts from commercial premises increased by 32 per cent to £34.5m in 1981, a rise similar to the previous year. The burglary business is even bigger than these figures suggest, since 48 per cent of all household properties are uninsured and thefts from them do

not get into the BIA statistics. Police records show that over the past five years burglary has shown the fastest growth rate of all crimes.

Why, then, has the alarm business not been growing even more rapidly? A major influence may be the attitude of the insurance companies—none of the major ones gives discounts on premiums to those customers who fit burglar alarms.

Mr Roger Pridoux, a spokesman for Royal Insurance, says: "Nobody reduces premiums because alarms don't prevent crime. It doesn't make a difference to a 'pro.' What are required are decent mortice locks and common sense."

Mr Pridoux says that the real growth in burglaries has been "at the lower end of the market"—precisely the area where alarms are unlikely to be found. "The average cost of a burglary has been going down. It's now around £200."

Which magazine reckons that when devices do go off around 88 per cent of their alarms are false. The police will only say that the figure is "over 85 per cent." They are clearly sceptical of the merits of burglar alarms. Chief Inspector Tom Brooks, deputy head of the crime prevention section at New Scotland Yard, insists that "alarms don't stop anyone breaking in. Only physical security can prevent that. False

alarms are a major problem. We operate a black list. Firms whose alarms continually go off are contacted, and if the problem persists, we simply won't respond to the alarm."

There are those in the intruder alarm industry who are growing increasingly concerned at one of the ways the market is developing. "It's been turned into a hard sell business," says Mr Stan King, UK sales manager of Securitor. "It's becoming a bit like double glazing, with the same kind of stories of poor old granddads being parted from their life savings. Some people are buying domestic alarm systems for literally thousands of pounds. There's no standard—you can pay anything."

According to Mr King, whose company sells battery-operated alarms for £65, some of the industry's salesmen are adept at selling expensive and relatively untested electronic systems. Then, says Mr King, "the installer comes along, bites his tongue, and thinks 'I hope this works.'"

Given all these problems, why doesn't the domestic consumer buy an empty alarm box, stick it on the front of the house, and rely on its effects as a deterrent? The answer seems to be that for all those who say this is a cheap deterrent against the "casual" thief, an equal number believe that it is quite an efficient way of attracting the professional burglar.

## APPOINTMENTS

## Laing Properties reorganisation

On January 1 LAING PROPERTIES will bring its UK development and property management activities together into three operating divisions. Mr Geoffrey Glover, a member of the board of Laing Properties, has been appointed director of the retail division; Mr Stanley Carter, director of the offices division; and Mr John Lamb, director of the industrial division. At the same time, the corporate planning function is to be combined with the central marketing service. Mr Philip Poulson has been appointed director of planning and marketing. The duties of Mr Howard Wright, commercial director of the Bull Ring shopping centre, have been extended to cover the Blackburn shopping centre.

CO-OPERATIVE WHOLESALE SOCIETY has established a fifth trading division alongside its food, non-food, retail and finance

director. Prior to that Mr Lacey was managing director of subsidiaries of Spicers.

Dr Peter Watson has been appointed general manager—product development for the GKN Group and chief executive of GKN TECHNOLOGY which operates GKN's group technological centre at Wolverhampton. Dr Watson was previously director of product engineering with GKN Technology.

Mr R. G. Bricknell has been appointed managing director of POSITIVE (PREVIOUSLY VARIABLE TRANSMISSION), Croydon. He will take over on January 1 from Mr Walter Jackson who is retiring.

Mr Geoffrey Keyes has been appointed director of group personnel for CHUBB AND SON.

Mr R. J. Saw has been appointed managing director of EGM SOLDERS. Mr Saw, formerly executive director of Kaweck-Billiton (UK) replaces Dr J. R. Jay who is shortly to take up a new appointment elsewhere within the Billiton group.

Mr Roger Johnson, previously finance director of BSC (Industry) and appointed to the Financial Institutions Group, has joined EUROFI (UK) as associate director.

BIRKIN AND CO. is making Mr F. D. Attenborough, joint managing director, sole managing director and chief executive on January 10. Mr W. A. Tanscliffe, chairman, will relinquish the role of joint managing director but will continue as executive chairman.

Mr Ian Thomas, chief executive of Odhams (Watford) until its sale last week to The British Printing and Communications Corporation, is to join IPC BUSINESS PRESS on January 4. Mr Thomas will become a director with board responsibility for the management services division, which includes Computer Data Processing, Compuprint, Computaprint, Data Services and ABO Travel Guides.

Mr Brian Kishish, group chief property manager, who has been with the company since 1962, has been elected to the board of GREENALL WHITLEY from March 31.

RACING  
BY DOMINIC WIGAN

THE DICKINSON chasers Silver Buck and Bregawn beginning to dominate the betting on the Cheltenham Gold Cup and only an emphatic display by Brown Chamberlain in today's three mile one furrow Presbury Park Chase will dispel the belief that the Harewood pair are going to dominate the 1983 Gold Cup.

Brown Chamberlain, who has drifted a couple of points in the Gold Cup betting since making a hash of the last fence in Ascot's H. and T. Walker Goddess Chase, when travelling better than any should have no problems today.

Likely to be seen in a more cautious mood following that out-of-character blunder at Ascot, Brown Chamberlain will outclass his seven rivals, barring a fall, even if his jumping is exaggerated or over-deliberate.

I expect to see Winter's most exciting chasing prospect since the days of Killiney and Lanzarote getting back on the winning trail over the longest trip he has tackled to date at the expense of Megan's Boy.

Thirty-five minutes before the big chase, 20 hurdlers of widely differing ability will be trying to sort themselves out in the three-mile Coral Golden Hurdle qualifying race. Top weight, Farmer always runs well here and will be a popular choice after his victory in the Nicolet Instruments Hurdle at the last meeting, and will go well without, perhaps, proving good enough to give weight to either Rising Falcon or Coxmoores Knitwear.

Rising Falcon proved more than a match for Another Deed at Wincanton on November 25; while Coxmoores Knitwear was earmarked as a certain future winner of a distance of three miles or further when seen running on best of all in the closing stages of a recent 2½-mile race at Haydock. Although he is held by Skewsbey on that running, Coxmoores Knitwear (well beaten in the Nicolet Instruments event) will almost certainly be able to reverse the placings over this course and distance.

CHILTERNHAM  
12.30—Combe Hill  
1.05—Coxmoore Knitwear\*\*\*  
1.40—Brown Chamberlain\*\*  
2.15—Stornally Spring

International

# THE PROPERTY MARKET

BY MICHAEL CASSELL

## Consortium funds Finsbury Avenue

ROSEHAUGH Greycoat Estates has lined up a £34m package of medium-term funding to finance the first phase of its Finsbury Avenue office scheme in the City of London.

Detailed planning permission has already been won and the latest news will put an end to gloomy speculation that the developers would find it very difficult to get funds, given the market's current poor state of health.

Work on phase one—which will provide 260,000 sq ft net of office accommodation adjoining Liverpool Street Station—is to start immediately and completion is scheduled for the second half of 1984. There will also be shops, a restaurant, a public house, leisure facilities and open space. Total cost of phase one is put at about £37.4m.

The partnership has arranged funding with the Chase Manhattan Bank and a consortium of debenture holders led by Globe Investment Trust and including British Land, Dixons, RIT Northern and the Asia Investment Trust. Globe Investment subscribed for £15m of the debenture stock.

As part of the deal, the consortium has acquired 30 per cent of the issued capital of Rosehaugh Greycoat—the company set up to develop Finsbury Avenue—and the

remaining 70 per cent has gone into a new holding company, Greycoat and Rosehaugh will hold just over 80 per cent of the issued share capital, with the balance owned by an unnamed private investor. The holding company will be responsible for subsequent phases of the scheme.

In leaving the developers with a big chunk of the equity, the somewhat unusual deal reflects Greycoat's determination to retain for itself a significantly greater share of the action than has been possible in the past, an option which has become much easier since the merger with City Offices established a stronger balance-sheet.

According to Geoffrey Wilson at Greycoat: "We are totally confident about the success of Finsbury Avenue. We were well aware that the future of the scheme was considered doubtful by some but we believe the consortium deal represents a big gesture of faith in our scheme and in the City office market. It also gives us the sort of stake which we will be looking for from now on."

"In the present market, we are able to take advantage of construction prices which we are unlikely to see again, an opportunity which will be reflected in very competitive rentals."

## Carnaby St for sale

THE Crown Estate is to sell by tender a major part of Carnaby Street, the world-famous shopping thoroughfare in London's West End.

The freehold estate comprises 180,000 sq ft of shopping and office space with a current rental income of £976,000 a year.

The estate will be on the market early in 1983 and the tender date will probably be in April. The Crown Estate bought the estate in the early 1960s when a comprehensive redevelopment scheme was being planned for Regent Street and Piccadilly Circus but the idea was subsequently dropped and the Commissioners say the resources tied up in Carnaby Street could be better employed elsewhere—not least on the £75m Millbank redevelopment scheme.

With two exceptions, the estate comprises the entire shopping frontage on the west side of Carnaby Street. There is £2,000 sq ft of offices and properties including Carnaby Court, a shopping precinct, and Kingsly Court, a Victorian building predominantly occupied as studios. The entire estate houses nearly 200 tenants.

Sole agents Drivers Jonas say there are reversions due in the medium term on the majority of leases and extensive opportunities for refurbishment to the office and studio space.

## Hammerson digs in Down Under

IN AGREEING to scoop up yet another batch of minority interests in its Australian properties, Hammerson this week moved to strengthen its asset base but at the same time served notice of its determination not to be deflected by a hostile environment for foreign investors.

The group has rarely looked back in Australia since it first arrived over 20 years ago and took over an expiring development option from Ravenshoe Properties. Ever coy about its earnings breakdown (never mind values), Hammerson has nevertheless shown undoubted satisfaction with the Australian operations, which in recent years have been providing good profits growth.

But "Australiaisation" has made the going progressively tougher for foreign companies wanting to share in a boom which now appears to be taking a nap. For while investors cannot acquire existing properties, most new developments must be undertaken on a 50-50 basis with a local partner and the Foreign Investment Review Board—seems particularly cautious about property companies—is around to see no one breaks the rules.

Mr Sydney Mason and his Hammerson colleagues are certainly not the type to break any rules but, as probably the

longest-established foreign property company in Australia and certainly one of the most successful, they are unlikely to be content with what they already have.

The plan, therefore, appears to be to consolidate what they hold (only 152 William Street, Melbourne, will involve outside interests once the latest deal with Australian Mutual Provident goes through) and to pursue the elusive stock exchange listing which may well give them some useful flexibility when it comes to further expansion, not least via any proposed acquisitions.

Sydney Mason does not openly indulge in such scenarios and is merely content to say that, having gathered in 100 per cent ownership of its Australian assets, Hammerson will proceed on the basis that any future developments will be in conjunction with local partners. None are planned however, in the near future.

Perhaps the most outstanding property involved in the new proposals is Royal Insurance House, Sydney, held on a long lease from the Church Commissioners and in which AMP had a 30 per cent stake. The 202,000 sq ft prime office building approaches the southern end of the Harbour Bridge and is the state headquarters of the Royal Insurance Group.

## Arrowcroft wins at Walsall

ARROWCROFT has been chosen by Walsall Metropolitan Council to carry out the £15m covered town centre shopping scheme which will link up with the existing Saddlers Shopping Centre.

The scheme, due for completion in 1985, will provide around 150,000 sq ft of retailing space including a department store, 14 standard shops and a series of smaller units to cater for local traders. In addition there will be ground level parking for 380 cars, a new bus station and covered taxi rank.

Included in the plans are proposals to restore the derelict canal wharf into a landscaped recreational area, while the historic Red Lion pub will be retained.

Testland Group, financed by Bass Pensions, has been appointed by Leicester City Council to develop the St Martins Square central area.

The £3m project, to be undertaken on a one-acre site, will comprise a speciality shopping centre of over 35,000 sq ft. This will include 37 shops, 4 kiosks, a restaurant, billiards hall and art gallery although larger commitments may be accommodated if required. The scheme, which adjoins Market Place and Gallowtreegate, the city's prime shopping street, will be retained by Bass Pensions. Joint letting agents are Jarrold and Donaldson.

Regional Properties has let its 15,600 sq ft office development at Elizabeth House, 211 Vauxhall Bridge Road, to Jephson UK, a subsidiary of a Norwegian shipping company, for an initial rent of £226,000 per annum. The development includes 3,500 sq ft of residential and storage space. D. E. & J. Levy and Hillier Parker May & Rowden acted for Regional Properties. Saffell acted for Jephson, who have taken a 30 year lease.

French Kier Developments has sold the freehold of Devonshire House, Manchester for around £1.75m, representing a yield of 5 per cent. The 13,800 sq ft office building is substantially let to Thomson McLintock. The name of the purchaser has not been revealed.

John Rithlat's British Land is continuing its U.S. expansion with the purchase of a 300,000 sq ft New York office block at 50 Broad Street, Manhattan from Stone and Webster. The purchase price is thought to have been \$27.5m (£17m). Jones Lang Wootton advised British Land on the purchase, with an initial yield of around 10 per cent. Stone and Webster, which occupies floors 14 to 21, will remain in the building.

The remaining 62 acres of available land in London's Isle of Dogs enterprise zone have been put on the market by the London Docklands Development Corporation. Six agents have been asked to handle the disposals.

Hillier Parker are marketing 28 acres available for office, shop, restaurant and hotel developments; King and Co have 11 acres for office and mixed business use; Healey and Baker are marketing 14 acres for a variety of business, leisure and sport uses while Henry Butcher have seven acres for mixed business units. In addition, Eastern Estate Office have been asked to find a developer for a 2.5 acre site for small business and office units while Grant and Partners are seeking a purchaser for a modern 240,000 sq ft building "capable of office or exhibition use after conversion".

A Financial Times conference on international property markets is to be held in London on January 19 and 20, 1983 at the Hotel Intercontinental. The two-day conference will examine major issues confronting the major world property markets and speakers will include the Rt Hon Tom King, Minister for Local Government, Mr Sam Levy a senior partner at Jones Lang Wootton, Mr John White of Landaur Associates, Mr Michael Mallinson of the President and Mr Trevor Bedford of Hong Kong Land.

British Home Stores is to take the largest store unit—total sales area 25,000 sq ft—within the Franchise's New Marlborough Development at Canterbury. Work on the new store is due to commence in January.

### TRANSATLANTIC TEAM.

This month a new alliance has been formed to handle property and plant appraisals and valuations on an international basis. The combined resources and experience of Fuller Peiser, Marshall & Stevens and Cooper Appraisals are now available to industrial and commercial clients throughout the UK, the USA, Canada and Europe.

Further information about this worldwide professional service is available from John Peiser FRICS, Fuller Peiser, Thavies Inn House, 3-4 Holborn Circus, London EC1N 2HL, Telephone 01-353 6851.

# Lloyd's must regain its grip

THIS WEEKEND the newly constituted Council of Lloyd's of London will be in closed session at Leeds Castle in Kent. With scandal after scandal breaking over the beleaguered insurance market, the council will have a great deal to discuss. The health and reputation of Lloyd's are of concern not only to the brokers, managing agents and underwriters who are directly involved. It is a substantial national institution, a key element in Britain's surplus on invisible trade. Moreover, when scandal touches one part of the City of London, the other institutions are inevitably concerned about the consequences, whether of lost prestige or a possible legislative crackdown. It is now clear that the sequence of problems at Lloyd's amounts to one of the most serious crises that a City institution has ever faced. The commercial consequences could be far reaching, and the American insurance industry, in particular, will not be slow to exploit its opportunities. In the circumstances it is vital that corrective action taken at Lloyd's must be rapid as well as fundamental. The essential problem at Lloyd's is that the market has failed to keep up with the standards of the times. To some extent this has been recognised by the passage of new legislation in Parliament to strengthen Lloyd's self-regulatory powers, but the whole approach to business needs to change. Much of the City has long since moved away from the old club-like approach: Lloyd's has lagged behind.

## Stringent

In a sense, Lloyd's has been commercially too successful for its own good. More stringent circumstances would have forced changes earlier. As it is, the thousands of underwriters who contribute the market's capital have generally received a satisfactory return and have had little motivation to seek greater disclosure of their market's affairs. In such a prosperous climate, a whole series of undesirable practices have been allowed to grow up. The underwriting agents who look after the affairs of syndicates of outside "names" have been allowed to build up their own "baby" syndicates for their personal benefit. Brokers firms are permitted to control the underwriting agencies in a way which also creates obvious conflicts of interest. In particular, recent disclosures have revealed complex international networks of

reinsurance companies. To put it at its mildest, brokers have an incentive to generate extra commissions by creating reinsurance business. But beyond this, evidence has appeared of more sinister activities.

## Principle

The growth of such practices can only be understood in the context of the structure of the Lloyd's market. The principle of Lloyd's is that the underwriting names take on unlimited liability in expectation of unlimited rewards, albeit at the cost of exposure to substantial risks. But the names have adopted an almost completely passive role, relying on the managers of their syndicates. So long as the names are receiving reasonable profits, they are unlikely to complain. But this has exposed the temptation of agents to a temptation. The names would not miss an extra element of profit which they were not expecting. It would appear that some managers have succumbed to the temptation to cream off revenues which were not necessarily large in relation to the total, but were often substantial in absolute terms. The auditing procedures and accounting principles applied to Lloyd's syndicates, which are now being urgently reviewed by Mr Ian Hay Davison, have not given proper protection to the outside members.

What can be done now? There is much talk about the appointment of a chief executive, which would indeed be a useful development, although a suitable man cannot be produced overnight, and in any case he could have no real power without some fundamental changes in the structure of Lloyd's. Such an appointment could not be the only step. Rather, Lloyd's must abandon what it described yesterday as its "self-imposed silence" and come out in favour of radical changes of approach. It must be seen to be co-operating enthusiastically with authorities like the Bank of England and the Department of Trade.

New policies must centre on the ending of the old paternalistic approach to the underwriting members, and the introduction of much more rigorous methods of disclosing and reporting on syndicate affairs. This must be combined with early implementation of the council's new powers to separate brokers and underwriting agents, and generally eliminate other conflicts of interest.

# Reagan's choice on defence

THE REJECTION by the U.S. House of Representatives of the Administration's request for initial funding for the planned MX land-based strategic missile, is a heavy political rebuff for President Ronald Reagan. It is premature to assume that the new missile is now doomed, since the Senate has yet to have its say. But President Reagan now has reason to fear that MX will probably be delayed, and may well be still-born.

If the MX is eventually rescued, it will probably create problems for nuclear arms control negotiations with the Soviet Union, not so much because of the missile itself, as because of the "dense-pack" basing mode proposed by the Administration. The U.S. has so far observed the terms of the SALT II Strategic Arms Limitation agreement, and the Administration rejects Soviet accusations that the proposed basing mode would infringe that agreement. It is true that there are ambiguities in the SALT text, and it is also true that MX does not create any real problems which could not be handled in the current Strategic Arms Reduction Talks (START). But it requires some sophisticated argument to maintain that the "dense-pack" basing mode does not break any commonsense interpretation of SALT.

## Debate

Moreover, it is far from obvious that the "dense-pack" formation, in which 100 missiles would be closely spaced in a strip 14 miles long and 1 mile wide, would serve any genuine purpose whose advantages outweighed the disadvantages.

The Administration has persuaded itself that its land-based missiles are, in their current dispositions, potentially vulnerable to a pre-emptive first strike by the Soviet Union. But there is fierce debate among experts whether such a surgical strike is technically possible, and few believe that the Soviet Union would dare run the horrendous risks involved.

There is nothing objectionable about the U.S. modernising its nuclear arsenal; the Russians have been doing it for

years. The trouble is that the MX "dense-pack" plan seems to epitomise a large credibility gap between President Reagan's arms control posture and his rearmament policy. The logic of the theory of vulnerability of land-based missiles has driven President Reagan to propose, in the START talks, not merely sharp reduction in all long-range missiles, but very tight limits on land-based missiles; but the logic of the MX plan is that vulnerability can be overcome by technical ingenuity.

## Alternative

If President Reagan fails to rescue the MX in its present form, it is most unlikely that any alternative basing mode can be devised which would deal plausibly with the theory of vulnerability, would be affordable, or which would not be in open conflict with current arms control agreements. It is true that there are fairly stark choices: either declare that the U.S. must live with the (debatable) danger of vulnerability and place much more emphasis on submarine-based missiles, or run the risk of an unconstrained arms race. From the point of view of the Alliance, the first of these two courses would be vastly preferable. Unfortunately, there is no sign of the Administration taking a cooler view of the strategic nuclear situation: if anything, its rhetoric about the dangers of the Soviet Union's perceived superiority has tended to harden since President Reagan came to power.

Budgetary pressures may yet drive some kind of reassessment. President Reagan has insisted that spending cuts to hold down the soaring deficit must come from domestic social programmes, not from defence. In the context of prolonged economic recession, the Congress which has emerged from the mid-term elections may be even less willing than its predecessor to go along with the President on this. Economic problems may force Congress to take a cooler and more sceptical view than President Reagan of America's real defence requirements.

# Eleventh-hour efforts will be made in Brussels today to defuse a major agricultural trade dispute

A CRIPPLING farm trade war may be in sight if the U.S. and the EEC fail to reach some sort of compromise at special talks on agricultural problems being held in Brussels today.

After the bitter debate over agricultural trade at the recent Gatt conference in Geneva, the U.S. bluntly warned the EEC it would be forced to move unless the EEC promised to take some action to curb exports of its agricultural surpluses on the world market.

American anger about the EEC's policy of "encouraging its farmers to overproduce," and dumping the unwanted surplus on the rest of the world, has been building up for many years, other leading exporters have become equally incensed.

But the Reagan Administration, faced with the worst crisis in the U.S. farming industry for 50 years, has now decided the time for a showdown has arrived. It takes place against the background of what is in essence a crisis of overproduction. For now this has eliminated the threat of world starvation. But it has created a fiercely competitive buyers' market in which increasingly, the U.S. and the EEC are competing head-on.

In 1980 the EEC spent more than \$750 million subsidising its farmers exports and capturing a larger share of world markets. Now it is spending a great deal more and the U.S. is threatening to retaliate, most probably in the dairy and grain sectors, unless the Community agrees to take positive action to stop what the U.S. says is the disruption of world agricultural trade.

The U.S. objects to the subsidies and argues that the only way to put agricultural trade back on an even keel would be to reduce these subsidies. Earlier this week in Washington, Mr John Block, U.S. Secretary of Agriculture, declared: "We want some commitment to progress. We cannot tolerate export subsidies being institutionalised in the EEC."

As Mr Block emphasised, the main bone of contention in Washington is the use of subsidies by the Community to sell its agricultural surpluses to the rest of the world at prices far below those in the

## European taxpayer is being 'penalised twice'

EEC. Cut-price butter sales to Russia have hit the headlines. But there is a host of other products, ranging from sugar to wheat, that receive heavy subsidies. These are designed to make them internationally competitive by bridging the gap between the EEC's internal guaranteed price and the world market level.

Community exporters of sugar, for example, are being paid over \$50 for each tonne they export to sell at the world market price of around \$220 a tonne. By the use of these subsidies, which are calculated to be cheaper than the cost of storing surplus stocks, the Community has developed into the world's second biggest agricultural exporter (after the U.S.). And the Community's critics claim that it is now seriously distorting world trade by using its industrial wealth to dispose

French farmers march through the streets of Paris to protest at falling incomes.

# Why the U.S. and Europe may be close to war

of the unwanted by-products of the common agricultural policy.

For the second, and closely linked, charge is that the surpluses are being created by the artificially high prices paid to the EEC farmers under the CAP. This policy, say the critics, encourages them to overproduce but discourages consumption within the Community. In other words, the European taxpayer is penalised twice—once to pay the export subsidies and a second time by the prices in Community shops that are well above prevailing world levels. The system is further buttressed by restrictions on imports that prevent overseas producers who produce rival commodities from competing in the Community.

The European Commission responds that this is only one side of the story. It notes, for example, that the EEC is the world's biggest importer of agricultural products, especially from the developing world, and has a considerable farm trade deficit, with imports exceeding exports by \$30bn in 1980. (Most of these imports, however, are of commodities not grown in the Community.)

What is more Brussels argues

that the U.S. also heavily subsidises its farmers and, therefore, has little room to complain about the Community. In a recent report the Commission calculated that subsidies to American farmers on a per capita basis totalled \$7,330 compared with \$4,780 in the EEC. However, it is not quite that simple—the average-size holding in the U.S. at 431 acres, is over 10 times the Community average of about 40 acres.

In fact, therefore, the actual subsidy per unit of production in the EEC is considerably larger than that in the U.S. The only exception is in the dairy sector where, partly in response to political pressure on both sides of the Atlantic, the guaranteed prices in the U.S. and the Community are such the same. Indeed the cost of support buying and storage in the U.S. is estimated at \$49 a tonne of milk against \$41 in the EEC.

So even the U.S. has a "surplus mountain" 200,000 tonnes of butter stored in limestone caverns in Kansas. These are a considerable embarrassment to the Reagan Administration. Until a year ago the U.S. played little part in the world dairy market, but the size of

these surpluses prompted it to sell 100,000 tonnes of butter in a complicated deal to New Zealand for resale to unknown buyers, probably the Soviet Union.

It now threatens to dump more of its stocks on world markets, offering some compensation to New Zealand as the main sufferer, if the EEC continues to win export markets with cut-price sales such as recent deals in the Middle East and elsewhere.

In the grain sector, meanwhile, Europe's farmers fare better, the total cost of price support in the U.S. works out at some \$12.80 per tonne of grain produced against \$18.70 in the EEC. The cost of U.S. grain support will go up considerably this year because of the very depressed prices.

Under the highly complicated system used in the U.S. to support its grain farmers, a deficiency payment is made when market prices fall below the target level fixed by the Government. This is the system that was used in Britain before entry into the Common Market. In times of plenty it can be extremely expensive, putting a heavy burden on the Treasury, instead of distributing the cost

among all consumers as the Common Market system does by keeping the market price at a high enough level to satisfy the farmers.

The U.S. also has an arrangement under which farmers can pledge their grain to the Government (represented by the Commodity Credit Corporation) in return for a price equal to the amount they have borrowed plus interest. The grain is stored by the farmer and can be redeemed by him on repayment of the loan, plus interest, as soon as it pays him to do so.

However, the U.S. farmer can only take advantage of these schemes if he agrees to participate in a special set-aside programme that involves taking some of his land out of production.

In wheat, too, the European farmer has an edge: the guaranteed price for U.S. wheat growers amounts to \$145 a tonne compared with an intervention price in the EEC of \$190 a tonne. At this price the European farmer can dispose of his wheat to the EEC-brokered intervention board in each country; there is also a threshold price of \$252 a tonne below which wheat cannot be

imported into the Community. In the case of feed grains, principally barley and maize, there is yet another advantage: the EEC intervention price is \$190 a tonne (against the U.S. guarantee level of \$106) and the threshold level is \$227 a tonne.

The heavy import levies charged by the Community to bring world market prices up to the threshold level not only protect the domestic farmer in the EEC but also discourage sales to the Community. Over the years sales of U.S. maize to the Community have dropped dramatically as the import levy makes them uncompetitive in the EEC, even though the world market has been at a very depressed level.

The Community insists there are two sides to all these issues. It claims that the U.S. also has a restrictive import policy for farm products. Currently it restricts imports of dairy products, grain, meat, cotton, peanuts and sugar. It has support programmes for dairy, peanut and tobacco farmers, and spends considerable sums (\$1.5bn currently) on the PL 480 scheme, under which countries in need can obtain agricultural products under very favourable terms, or indeed, in some cases for nothing.

The Americans concede that the PL 480 aid programme is used for "market development"—ie providing free or subsidised products, notably soyabean oil and grains, to create a need for them. It is a food weapon that was favoured by some U.S. politicians as a way of establishing influence in sensitive areas.

Recently the Reagan Administration has brought in a new method of boosting exports to developing countries—so-called blended credit programme. Under this scheme exports receive interest-free loans for a proportion of the total sum required. (Normal interest is paid on the rest of the loan, but the average interest rate paid is much reduced.) The scheme, as well, enabling the U.S. to capture some new markets, that the Administration is considering extending it and would almost certainly receive Congressional approval for more funds.

## Administration's new method of boosting exports

enables the U.S. to compete with the Common Market in a discriminatory way in selected areas—country by country, and commodity by commodity. Just dumping its huge surpluses of grain and dairy products on the world markets, as threatened, would cause prices to plummet further, and would probably hurt other countries considerably more than the EEC.

The U.S., however, is determined to do something, and may not be too concerned who gets hurt in the process. The EEC now seems prepared to adopt a more conciliatory attitude than it did at Gatt, exporting surpluses is a cornerstone of the Common Agricultural Policy, which in turn is a vital part of the whole Community. It is, therefore, difficult to see how the "collision course" forecast by Mr Block in Paris last week can be avoided.

# Men & Matters

## Question marks

Defence ministers have had to answer 600 questions in the House of Commons in the past eight months—war in Iraq would have added around £30,000 to the multi-million pound bill for the operation.

One MP has dominated the exchanges. Tam Dalyell, Labour MP for West Lothian, has put down no fewer than 190 of the questions. That is probably ten times the number an MP would be expected to address to all government departments in a year.

Dalyell, one of the Government's toughest critics at the time of the conflict, is clear about what he is after. Apart from getting material for a book, he believes the MOD—and above all, 10 Downing Street—will have a lot of information to impart.

Not much escapes his persistent probing. In 40 questions this week, he has ranged from demands about the cost of fitting, and later removing, a helicopter on the Usanda (£157,000 and £147,000) to querying why the assault ship Fearless turned up in Venice last month with a London taxi on its deck.

(Answer: the ship was on rest and recreation and the taxi, bought by sailors to help with such pursuits, is carried "at the discretion of the commanding officer and only when to do so will not interfere with operational activity.")

Old Etonian Dalyell's questioning has been particularly sharp over the sinking of the Belgrano. Details he extracted from the MOD this week, he claims, show that the Argentine ship was heading for its home port when it was sunk.

During his 20 years in the Commons, Dalyell (aided by his wife's research) has proved an awkward handful for many a minister. Labour as well as Tory. Margaret Thatcher and

"I'll bet the Falklanders are looking forward to their new road, their own rush hour, single lane working every Bank Holiday."

John Nott have not heard the last of him yet.

## Danger man

With Sir Derek Rayner, Mrs Thatcher's adviser on stemming waste and inefficiency in the Civil Service giving up his executive role (he will still proffer the PM advice) it falls to Clive Priestley, aged 47, to risk becoming the most unpopular official in Whitehall. Priestley, who has been Rayner's chief of staff, is well regarded by his Civil Service peers. But some may have cause to think again as he presses on with his good housekeeping. The unit he will now head is charged with scrutinising government departments with a view to achieving savings.

In the present climate of cuts and economies looking over one's shoulder has become a natural defence mechanism of the prudent civil servant. When taking a precautionary glance the man he will not hope to

## see will be Priestley.

His major spare-time interest is in his work as a churchwarden at St Martin's, St John's Wood. Worried civil servants will know where to go to kneel and pray in future.

## Social circle

Shirley Williams does seem to have a knack of irritating her Social Democratic colleagues in the Commons. They love her dearly but...

She jumped in with instant criticism of William Whitelaw's ban on the three Sinn Féin leaders' visit to London without consulting party leader Roy Jenkins. Jenkins, an affair spokesman, said the ban was "a bit of a brownie" who "speaks for London."

All three disagreed strongly with her views and Jenkins yesterday came out in public support of the Home Secretary's decision.

Williams was due to have her knuckles severely rapped—not least because she has been complaining lately about the lack of consultation in the SDP leadership.

## Money talks

Jocelyn Stevens is an old Fleet Street hand who has turned his talents to magazine publishing for the second time in his career. But he was sadly misled when he sent a free, unsolicited copy of his new glossy publication The Magazine to my house on the grounds that it was being delivered to the 100,000 wealthiest households in London.

But let us assume that the remaining 99,999 households are all awash with cash. What sort of people are they. The Magazine gives us a fascinating glimpse of their lifestyle.

Naturally Christmas presents suggestions loom large. Highly recommended is a Bubble and Squeak package — "Champagne on ice with a life-like

## squeaky pig and cigar."

If your loved one has literary tastes how about "a selection of the most amusing articles from The Times 1945-1981" — a slim volume for the pocket I wouldn't be surprised. And should you be seeing too much of the wife. The Magazine has just the gift. "Chug, chug, chug all the way to Venice. No need to queue; buy a gift voucher." The present is a one-way ticket for £250 on the Orient Express.

A bonus of being rich is that you can eat out expensively. But I did wonder about one London restaurant recommended in The Magazine. "The food is far from good... there is no menu to speak of... the bill is usually astronomical and I have paid as much as £40 for two (with plonk). Still it is worth it..."

Wonderful what money will buy.

## Know-Howe

After all the spying that has been going on, it is good to know that Britain's Chancellor, Sir Geoffrey Howe, is well apprised to the dangers of "careless talk."

As he set off for yesterday's much-heralded meeting of finance ministers of the Group of Five top nations in Frankfurt to discuss the threat to the world's banking system, Howe told the Press Association: "I shall be back tomorrow, but I am not saying who I shall be seeing or the reason for my trip."

Well, I can reveal that two of the people he ate dinner with last night and met at breakfast this morning in the Schloss Hotel were U.S. Treasury Secretary Donald Regan and West German finance minister Gerhard Stoltenberg. They both issued official statements to the press.

## MINISTERS AND CENTRAL BANKERS SEEK TO RESTORE CONFIDENCE

### Group of Five explores initiatives

BY STEWART FLEMING IN FRANKFURT

THE FINANCE MINISTERS and central bank heads of the world's five leading industrial nations—the Group of Five—were locked in discussions near Frankfurt yesterday exploring new initiatives to shore up confidence in the world financial system and combat the threat of continuing recession and widening trade protectionism.

The meeting, which brings together for the first time in their official capacities Mr Donald Regan, the U.S. Treasury Secretary, and Herr Gerhard Stoltenberg, the new West German Finance Minister, is expected to smooth the way for an early increase in the finance that the International Monetary Fund can lend to heavily indebted developing countries.

Any indication that major industrial countries—the U.S., Japan, West Germany, France and the U.K.—were agreed in principle about the scale of proposed increases in the IMF's resources would itself help to

improve the psychology in the world financial markets.

In parallel with an examination of the world economy, the specific proposals include a decision to increase the IMF's present quota subscriptions of \$86bn by as much as 50 per cent. Such a move may require persuading the U.S. to move beyond a 40 per cent increase, which it is thought to have conceded informally.

In addition, the meeting is expected to consider changing the terms of the General Arrangements to Borrow (GAB) between the 10 leading industrial countries and Switzerland, so funds can be advanced to countries outside the GAB group. The possibility of increasing resources within the GAB from \$6.5bn to between \$15bn and \$20bn will also be discussed.

The question of accelerating the procedures for increasing the IMF's resources by bringing forward the Interim Committee meeting of the

IMF from April to January or February is also to be debated.

In many respects, the international financial climate has improved since the IMF annual general meeting in Toronto in September.

There has been a significant easing of U.S. monetary policy and an accompanying fall in U.S. interest rates. Dr Wilfried Gull, joint chief executive of Deutsche Bank, for example, maintains that there has been considerable progress in resolving the short-term financial crisis which was threatening to overwhelm Mexico at that time. This is seen as an important demonstration of co-operation between governments, central bankers, the IMF and commercial bankers.

But it is increasingly recognised that a more coherent approach to dealing with the repercussions of world-wide recession is needed, rather than continuing with the present "fire-fighting" approach to

country debt problems through emergency intervention via the Bank for International Settlements.

In one important respect, the overall situation is seen to have deteriorated since September. Hopes that a strong U.S. economic recovery in 1983 would pull the world out of recession, and contribute to an automatic easing of many economic problems, have faded.

In the view of Mr Rimmer de Vries, chief international economist of Morgan Guaranty Bank in New York, this factor has helped to account for the statements earlier this week from the U.S. Treasury Secretary which hinted that a new international monetary conference may be needed, and indicated a greater interest by the Reagan Administration in promoting exchange rate stability.

These comments caught European governments by surprise, and Mr Regan will be expected to explain what lies behind them.

## Kohl vote play for spring election

By James Buchan in Bonn

CHANCELLOR Helmut Kohl of West Germany plans to open the way to general elections next spring by continuing to lose a parliamentary vote of confidence next Friday, December 17.

Members of Dr Kohl's parliamentary party, the Christian Democrats (CDU), confirmed yesterday that the Chancellor has settled on the vote as the least painful way of getting round a constitutional ban on mid-term elections.

His plan was approved by the CDU yesterday and was submitted to President Karl Carstens last night.

Pending the approval of President Karl Carstens, Dr Kohl will intervene in a parliamentary debate on Tuesday, arguing that his coalition of CDU, Christian Social Union (CSU) and Free Democrats (FDP) had completed its initial task with the passing of the 1983 budget.

He will then ask for a vote of confidence to be put to the vote immediately after the budget is passed by parliament on Friday.

In the vote, the overwhelming majority of all of the coalition deputies must abstain and the opposition Social Democrats (SPD) vote against the government. The SPD has demanded new elections since its own coalition with the FDP collapsed in September and it was unseated in a parliamentary vote of no confidence on October 1.

The compromise, though messy, is widely regarded as the best way to allow the electorate to have its say about a government which was born in parliament. Though scarcely in accord with the spirit of the constitution, it is held as infinitely preferable to changing a constitution that Germans believe should not be tampered with.

The greatest misgivings are in the ranks of the small FDP, which has suffered a great loss in popularity since its change of allegiance. Opinion polls give the party only 4 per cent of the vote.

## MPs query ban on Sinn Fein

By Margaret van Hattem

THE DECISION by the Home Secretary, Mr William Whitelaw, to ban three Sinn Féin members of the Northern Ireland Assembly from entering Britain has provoked widespread confusion and disagreement at Westminster, cutting across the normal party lines.

It has also prompted an increasing number of questions as to the Government's real motives and reasoning, with conflicting answers emerging from Whitehall departments and members of the Government.

Meanwhile, Mr Ken Livingstone, the Greater London Council leader, announced yesterday that he planned to visit Northern Ireland, as a guest of Sinn Féin, in the New Year.

Exclusion orders against the three men—Mr Gerry Adams, Mr Dáirí Morrison and Mr Martin McGuinness—were signed on Wednesday following Mr Livingstone's refusal to withdraw his invitations for them to visit London.

MPs from both major parties are questioning Mr Whitelaw's use of the law, and some suggest that the Government has grossly overreacted to the situation.

Defending Mr Whitelaw's decision in the Commons yesterday, Mrs Margaret Thatcher, the Prime Minister, insisted that he had simply used his powers under the Prevention of Terrorism Act to exclude men whose past involvement in terrorist activities had been established to his satisfaction.

## THE LEX COLUMN

### GRE picks up a life line

Guardian Royal Exchange has barely dented the £78m which it raised for acquisitions through last year's rights issue, so it is a little puzzling that the £39m which the group is now spending to subscribe for a 10 per cent stake in Hambro Life is being met from life, rather than shareholders' funds. The arguments in favour of the deal are more commercial than financial—and relate to the non-life business at that—while this single transaction will presumably swallow up a hefty chunk of new cash flow allocated by the life funds for UK equity investment over the next 12 months.

Hambro Life equity yields only a touch over 5 per cent, so spending shareholders' cash would have produced short term earnings dilution, but life policyholders may well look askance at substantial payments to a highly successful life company when GRE's own life business needs beefing up.

GRE must hope to push its own non-life products through the Hambro marketing arm and it may establish a more direct link in overseas life business. More distantly, GRE may be eyeing the 37 per cent holding which Hambros retains in Hambro Life. From Hambro Life's point of view, the deal has straight-forward advantages. It will have cash to spend on developing the recently acquired Dunbar in both banking and portfolio management, while leaving itself room to finance money fund activities. GRE's expertise in the non-life area should allow Hambro to spread its wings there as well.

Stock-turn is down from 39 days to a more typical 27 days, worth £27m in cash. Yet the group has actually managed to increase credit-tors since March, by £47m, so credit-taken has moved up from an already high 1.4 times stock to a very aggressive 1.9 times. This has been the key to a reduction in net debt from 100 per cent of net tangible assets on the March pro-forma to a mere 400 per cent. The pressure on suppliers may not be sustainable in the long term, but Argyl has won itself sufficient breathing space to expand. The shares fell 3p yesterday to 111p.

Elsewhere the contribution from the UK clothing chains has fallen, while there has been an increase in profits from the furniture stores and from abroad. The current half may see further benefits in the hire purchase business as a result of the lower level of interest rates, although, true to form, Gus will doubtless treat the boost on its fixed rate contracts in a highly conservative way. Nevertheless, the outcome for the year may exceed £200m, against £189.2m. The "A" shares fell 5p yesterday to 583p, where the prospective yield is 3 1/2 per cent.

Argyll Foods  
The full glory of merger accounting is unveiled with Argyl Foods' first set of results following the acquisition of Allied. Pre-tax profits for the six months to September are stated at £10.2m, a total which includes some £3.9m of earnings made by Allied before the deal was completed—including £1m of property profits. Retention of these earnings is justified on the curious grounds of the relative sizes of the two groups even though the former owner of Allied immediately sold to the newly-created Argyl shares.

At least Argyl provides figures to allow converts to acquisition accounting to do their sums. These reveal that the profit record of the original Argyl business suffered something of a dent, with pressures on the food manufacturing side pushing operating profits 9 per cent lower to £2.3m. Nevertheless, the Allied businesses do seem to have been pepped up.

## Doubts on Grundig link with Thomson

By James Buchan in Bonn

GRUNDIG, the troubled West German consumer electronics group, confirmed yesterday that it was holding talks with a number of major European electronics companies, including Philips of the Netherlands and Robert Bosch and Siemens of West Germany.

The announcement by Grundig follows speculation about the future of the company, following its signing last month of a letter of intent to take Thomson-Brandt of France on board as a major new shareholder.

However, the group, which reported losses of DM 40m (\$16m) in 1981, would not comment on the content of the discussions or whether it was seeking an alternative solution to Thomson-Brandt's takeover of the 75.5 per cent of Grundig capital held by the Max Grundig Foundation.

Philips already owns the remaining 24.5 per cent of Grundig and is one of its most important suppliers of television tubes and components. Siemens is involved in consumer goods only through its 50 per cent share with Bosch in Bosch-Siemens-Hausergeräte, which in turn has a 25 per cent stake in Bosch's consumer electronics subsidiary, Blaupunkt.

Part of the uncertainty over the Grundig-Thomson-Brandt deal lies in the attitude of the West German authorities, whose approval would be required for the merger. The Economics Ministry in Bonn said yesterday that it could make no statement until the West German Cartel Office in Berlin had ruled on the deal.

But the Economics Committee of the Bavarian parliament yesterday called unanimously for a larger "European solution" involving Siemens, Bosch and Philips to protect the 20,000 Grundig jobs in the state. Philips and Siemens in joint research programme, Page 17

### Philips and Siemens in joint research venture

BY WALTER ELLIS IN AMSTERDAM AND KEVIN DONE IN FRANKFURT

PHILIPS of the Netherlands and Siemens of West Germany, Europe's two largest electrical groups, have announced plans for close cooperation in long-term research and development.

In a move that Philips believes should help the two companies to compete more effectively against the electrical giants of Japan and the U.S., a team of some 50 scientists will pool their research into fundamental aspects of high technology.

Initially, the annual budget for the joint research is to exceed £10m (\$3.74m), but the Dutch partner believes that the deal, already concluded, is a "new phenomenon", the outcome of which cannot be forecast at this stage.

An executive described it as "a gamble, very much in line with the policy outlined several times this year by Dr. Wisse Dekker, Philips president, for more cooperation between European companies."

Dr. Dekker has spoken of the need for a European-wide effort to strengthen the continent's manufacturers against the Japanese and the Americans.

However, in spite of the optimism contained in the Philips outline, it must be said that the group presently employs some 34,000 people in research and development, with an annual budget of £1.2bn.

Siemens has 30,000 workers in the same area and a budget per year of DM 3.3bn. The £10m or so which is to be spent jointly is therefore small beer indeed and important only if it contains the seeds of something much bigger.

Short-term product development is excluded from the new arrangement, so that Philips and Siemens can be expected to remain fully in competition with each other in the marketplace.

The agreement covers fundamental work in semiconductor materials, micro-electronics, sub-technology, computer-aided design and electronic speech recognition.

The subjects for study were chosen in line with the research priorities of the Dutch and West German Governments and of the European Community, particularly the EEC's European Strategic Programme on Research in information technology.

Philips employs the bulk of its research personnel in its individual industrial sectors. Those working in cooperation with Siemens staff will be drawn from the central research and development laboratories in Eindhoven.

### Nimslo bids for Berkey Photo

BY OUR NEW YORK STAFF

NIMSLO, the Atlanta-based maker of 3-D cameras whose shares are traded on London's unlisted securities market, is planning to bid for Berkey Photo, a U.S. film processing and camera retail group. Before yesterday's announcement, Berkey had a stock market value of \$30m.

Nimslo has been buying shares in Berkey since the summer, and now has shareholding of around 16 per cent. Berkey said yesterday that it has received an unsolicited proposal for a business combination from Nimslo, for a bid which could consist of cash and stock in Nimslo.

Nimslo started to market its 3-D cameras in the U.S. earlier this year. The company has raised substantial sums of capital in London, and its shares are being produced in Scotland under an arrangement with Tinsley.

Berkey had sales of \$137m in the first nine months of this year. Another large shareholder is Transamerica Corporation, which has held 7 per cent of the company since 1980.

## CGE expects exports to boost sales and orders

Foreign orders totalled 48 per cent of contracts received by the group in 1982, against 40 per cent in 1981.

The total of group employees would rise to 191,000 at the end of 1982, up from 180,000 a year earlier it added.

## Gulf & Western earnings fall

Sales for the first quarter were \$1.24bn compared with \$1.32bn in the same period last year. The company said six out of its seven operating groups were profitable in the latest quarter. The exception was the natural resources group which posted a loss as a result of continued weakness in the zinc market and declines in chemical operations.

## Lafarge chief takes a year to plan

M Lecerf would continue to participate in decision-making and planned to resume the chairman-

## INTERNATIONAL APPOINTMENTS

## Amax makes changes in senior posts

Mr. John Town, president and chief operating officer, of AMAX INC., Connecticut, has announced he will retire on December 31. He will continue as a member of the board. He has been elected chairman of its executive committee. Mr. Pierre Desrosiers, president and chief operating officer, will assume the additional duties of president and chief operating officer. Mr. W. G. Gotsch, president and chief operating officer, will assume the duties of president. Mr. E. J. Smith, vice-president and group operating officers, together with Mr. J. W. Gotsch, president and group operating officers, will assume the duties of president. Mr. Smith is members of the executive office. The company also announced five other senior management promotions. Mr. J. Blackburn comes executive vice-president responsible for all operations within the company's energy and chemicals divisions. Mr. J. Gotsch is appointed executive vice-president responsible for overall operations within the company's energy and chemicals divisions. Mr. J. Gotsch is named executive vice-president.

ent in charge of specialty and light metals. Mr Malcolm R. Mylles was made executive vice-president and general counsel responsible for government relations and legal matters. Mr David George Ball was promoted

ent, finance and administration with responsibility for all financial and accounting activities for Procon and its worldwide subsidiaries as well as corporate administration functions.

managing director of both companies. A finance ministry official, Shakh Ibrahim bin Rashid al Khalifa, has taken over at Banagas while an assistant under-secretary at the ministry of education, Mr

senior vice-president and secretary with responsibility for the firm's relations with governmental and corporate proprietorial matters.

## THREE SENIOR STOCKBROKERS LOSE LICENCES

## Kuala Lumpur SE shake-up begins

BY WONG SULONG IN KUALA LUMPUR

THE Malaysian Government has begun a major shake-up of the Kuala Lumpur Stock Exchange by forcing three senior stockbrokers to cease trading.

At the same time, it is putting through Parliament a bill giving it extensive powers to regulate trading in securities, including the appointment of Government nominees to the board of the KLSX.

The three brokers, whose application for renewal of their trading licence was rejected by the Registrar of Companies, are Mr Jimmy Tan Sun, deputy chairman of the exchange, Mr Hwang Sing Lue, a committee member, and Mr Fung Yan Khai, also until recently a committee member.

Their removal came shortly before members of the KLSX

were due to meet this Saturday to elect a new management committee. This has thrown considerable uncertainty and confusion into the election as Mr Jimmy Tan was widely tipped to become the new chairman following the departure of Tengku Noone, who has to retire, under the regulations, as he had served six years.

A senior government official said licences of the three were not renewed because the authorities have reasons to believe they, without authorisation, appointed agents to trade in smaller towns not served by registered brokers.

The three are contesting this allegation and have one month to appeal to the Minister of Trade and Industry against the decision by the Registrar.

The official said the shake-up in the exchange should be viewed as part of the continuing efforts of Prime Minister Mahatir's Government to instil "clean, efficient and trustworthy" administration throughout the country.

The Government is known to have been unhappy with the running of the KLSX for a long time, in particular with the reluctance of the exchange to take action against members indulging in questionable trading practices, its closed-shop policy, and what it regards as a general lack of professionalism.

The amendments to the Securities Industry Act of 1973 run to more than 100 pages and will be debated in Parliament tomorrow.

It gives the Finance Minister, and the Capital Issues Committee, extensive powers to shape the management of the exchange, to intervene in the market and to make rules and regulations.

There are provisions to curb short selling, bogus trading, market manipulation, false or misleading statements and dealings by corporate officers in securities. Heavier penalties for such offences are proposed.

The government would still prefer the KLSX to regulate itself as far as possible, but it believes legislation is needed to ensure the authorities power to ensure healthy growth in the securities industry and to improve protection of smaller investors.

## Hardie maintains income despite building downturn

BY LACHLAN DRUMMOND IN SYDNEY

THE DOWNTURN in the Australian building industry has restricted James Hardie Industries to a marginal 1 per cent improvement in net earnings to A\$18.24m (U.S.\$17.5m) for the half year to September 30.

Hardie, which has almost two-thirds of its operations related to supplying the building industry, saw sales advance by 10 per cent to A\$508.6m in the period and says results were hit by a "sudden and substantial" downturn in the second quarter.

As well as the soft building products market, Hardie also saw demand slacken for its automotive brake linings, although railway brake block operations performed well. All areas, and particularly paper and packaging, were profitable.

The company is pleased with

further testing of its asbestos-free railway brake blocks in the U.S. and is pushing into export markets, notably Chile.

The profit was struck after an increase in interest charges from A\$13.96m to A\$16.46m, which reflected higher rates and a A\$27m increase in borrowings on top of the roughly A\$200m of debt outstanding at the beginning of the year. Most of the funds went on acquisitions.

The New Zealand offshoot, James Hardie Impex, had earlier reported a 14 per cent profit rise to A\$3.5m and is said still to be performing well.

The company does not expect to maintain annual profits at last year's A\$42m but has held the interim dividend at 11 cents on its one-for-four bonus increased capital as a mark of its confidence in the longer term.

## U.S. group to overhaul Myer property business

BY OUR SYDNEY CORRESPONDENT

MERRILL LYNCH, the U.S. securities house, has been appointed to overhaul the financial structure of the ailing Myer Emporium retailing group in Australia.

The appointment provides the local Merrill Lynch offshoot with its first major venture into the corporate finance. It will be to shake up Myer's near A\$600m property portfolio in an attempt to produce the debt built up by the company in a recent run of mostly unsuccessful diversifications.

At its July balance date, Myer had debts totalling A\$466m against shareholders' funds of A\$555m. Crippling interest payments—A\$58m last year—forced net earnings down from A\$38m to A\$18.96m last year with losses coming in the final half. On the

back of weak retail sales, these losses have continued into the current year.

The Merrill team will be headed by Dr Alastair Stone, an Australian who was a senior executive with the large property group Lend Lease Corporation. He has a brief to review Myer's complete financial structure, but the immediate aim is thought to be a A\$100m float of property into a trust, a method successfully carried out by Lend Lease in the past.

Last year Myer saw a programme for the sale of A\$120m of property fail because of a poor investment environment, achieving only A\$25m of sales. All properties previously up for sale have now been withdrawn. The first tangible evidence of Merrill's involvement is expected to emerge next March.

## Slow advance at Rembrandt Group

By Our Johannesburg Correspondent

REMBRANDT GROUP, the diversified South African liquor and tobacco conglomerate, advanced slowly in the six months ended September 30. First-half pre-tax profits after Lifo (last-in, first-out) accounting adjustments rose by 3.6 per cent to R90m (R33m) from R86.9m a year earlier.

The pre-tax figure was struck after a R14.2m Lifo adjustment compared with a corresponding R10.9m adjustment in 1981. In the year ended March Rembrandt reported pre-tax profits of R172.3m, calculated after the deduction of a R25.3m Lifo adjustment.

The directors made no forecast for the second half. The interim dividend has been increased to 30 cents a share from 23 cents, while first-half earnings rose to 206 cents a share from 146.9 cents.

The year ended March resulted in earnings of 392.2 cents a share and a total dividend of 48 cents a share. The company's cigarette operations include a major stake in Rothmans International.

## Court go-ahead for Harvester credit sought

By Our Sydney Correspondent

LENDERS to the International Harvester group in Australia will seek court approval on Monday for a credit agreement, after the adjournment yesterday of a hearing of a winding-up petition against the company.

If the court gives its expected assent work will begin almost immediately on a full-scale reconstruction programme for the truck and farm machinery maker. Such a scheme has a March 31 deadline for completion, and will also require the backing of the courts.

In outline, it will see the cessation of agricultural machinery manufacture by Harvester in Australia and a scaling down of its truck making. Imports from the U.S. parent will fill the gap.

## Strong interim profit and sales growth at Kyocera

BY YOKO SHIBATA IN TOKYO

KYOCERA, the world's dominant supplier of ceramic packages for integrated circuits, and its 16 consolidated subsidiaries lifted net profits by 56 per cent to record Y9.89bn (Y39.6m) for the first half ended September. Pre-tax profits were Y18.9bn against Y13.05bn and consolidated half-year sales were 11.7 per cent higher at Y84.3m (Y337.2m).

The recovery of orders for IC packages from U.S. and European semiconductor makers lasted for only the first three months of the period. As a result, sales of IC packages were lower than expected, increasing by only 25.3 per cent to account for 49.6 per cent of the total turnover.

Vigorous demand from consumer electronics products pushed up sales of components by 37.2 per cent to account for 15.1 per cent of the total turnover. Sales of ceramics for industrial machinery rose by 10 per cent to account for 9 per cent of the total turnover.

Sales of a new product, "Bioceram," a replacement material for human teeth and bones rose by 71.6 per cent to account for 0.9 per cent of the total turnover.

On an unconsolidated basis, Kyocera's full year sales are projected at Y188.8bn, up by 36 per cent from the previous fiscal year. Full-year unconsolidated pre-tax profits are expected to reach Y36.3bn, up 35 per cent, and net profits Y17.6bn, up by 30 per cent.

The company, formerly known as Kyoto Ceramic reported unconsolidated first-half net profits of Y7.98bn, up 20.1 per cent, pre-tax profits of Y16.53bn, up 30.6 per cent and sales of Y56.87bn, up 14.3 per cent.

## Nippon Seiko first half setback

BY OUR TOKYO STAFF

NIPPON SEIKO, Japan's largest manufacturer of bearings and machinery parts, posted setbacks in revenue and profits in the first half year ended October 31. The earnings setback is the first in eight years.

Pre-tax profits for the six months slipped by 29.9 per cent to Y6.39bn (Y26.4m). Net profits sagged by 16.5 per cent to Y3.83bn, on sales of Y94.69bn, down 3.1 per cent compared with the corresponding period in the previous year. Per share profits were Y11.83, against Y14.72.

Sales of precision bearings for

electronic equipment, such as video tape recorders and office automation products, fared well. But sales of bearings to the motor and machine tools industries were sluggish.

Weak sales in North America and South East Asia brought total exports down in value by 14.4 per cent to account for 12.4 per cent of total turnover. Higher costs, resulting from cuts in operations and higher depreciation charges owing to capital investment, lifted the cost to sales ratio by 3.1 per cent to 80.7 per cent.

In the current half year end-

ing March 1983, the company expects to maintain favourable sales of bearings for electronic equipment. Sales of motor vehicle bearings and exports are expected to remain sluggish. Earnings are also expected to be adversely affected by intensifying competition resulting from the entry of other makers to the profitable precision bearing and ball joint industry.

Full year pre-tax profits are expected to reach Y13bn, down 27 per cent. Net profits are projected at Y7.5bn, down 20 per cent, on sales 3.7 per cent lower at Y190bn.

## Cycle and Carriage earnings surge

BY GEORGIE LEE IN SINGAPORE

A MAJOR provision for investment losses marred an otherwise strong annual performance by Cycle and Carriage, the major motor vehicle distributor in Singapore and Malaysia.

Group pre-tax profits rose by 37 per cent to S\$70.2m (US\$52.5m) for the year ended September. After-tax profits showed a 32.5 per cent gain to S\$40.2m.

However, the group had to make provision for extraordinary losses of S\$20.5m arising almost entirely from its stake in the troubled Newman

Industries of the UK. In the previous year it made provision for extraordinary losses amounting to S\$27.5m, largely for the same investment.

After extraordinary items and tax, group profits were S\$19.9m, compared to S\$3.9m in 1981. The improved earnings were achieved against a 2.4 per cent decline in turnover to S\$452.8m. Group sales in Singapore improved by 2.4 per cent to S\$166m, but Malaysian sales fell by 24 per cent to S\$126m.

Turnover of associated com-

panies rose by 20 per cent to S\$160.5m. Cycle and Carriage is the distributor of Mercedes Benz and Mitsubishi vehicles. The sharp rise in earnings, particularly in the second half, appears to have come from improved vehicle sales and the decline in the Daimler and Japanese yen against the Singapore dollar.

The board proposes a final gross dividend of 10 per cent, 21 percentage points higher than the previous year's final. This brings the total distribution for the year to 20 per cent against 17.5 per cent.

## Companies urged to reduce bank borrowing. R. C. Murthy reports

## India boosts bond and stock markets

"ITC BONDS — the latest Bond thriller" has proclaimed a hoarding on the fashionable Marine Drive in Bombay. This has been part of the build-up for flotation of Rs 100 crore debentures by the Calcutta-based ITC, an affiliate of B.A.T. Industries of the UK.

ITC strengthened the attractions of the offer with an interest rate of 15 per cent, the maximum allowed for non-convertible debentures, and the facility of turning the interest income into equity, with chances of capital gains.

"You have the best of both worlds," says a broker for ITC bonds. "The highest interest allowed on any instrument and capital appreciation of equity."

Dunlop India has floated con-

vertible debentures, offering to convert half the bond amount into equity in one year at a pre-determined price.

India's capital market currently exudes unusual optimism. The Government has set the target of raising Rs 7bn (S\$700m) in equity and debenture capital in the year-to-next March. This represents a 40 per cent increase from the Rs 5bn mobilised in 1981-82. The target for 1982-83 is Rs 10bn, according to the Industrial Development Bank of India.

But by the shortage of resources, the IDBI is encouraging private companies with good market ratings to raise funds on the capital market, and so cut their dependence on loans for industrial expansion and diversification. The strategy has paid off.

The share of India's big business houses (defined as having assets of more than Rs 200m) of total loans made by IDBI dropped to 7.3 per cent (Rs 125bn) in 1981-82 from 11.5 per cent (Rs 1.81bn) the previous year.

The Government has launched a two-pronged drive to broaden public support for the corporate equity and debenture markets. It is wooing the 10m overseas Indians — with guarantees of repatriation of investment and earnings — to support Indian industry. The aim is to attract savings mainly from the 1m Indians in the U.S., Canada and the UK and the 300,000 Indian expatriates working in the Gulf.

DUNLOP INDIA and ITC Ltd two of the multinationals operating in India have floated issues of debentures in strikingly short time—helped by the present surging buoyancy of the Indian capital market.

Dunlop India raised Rs190m (S\$122m) in 60 days and ITC, the affiliate of B.A.T. Industries of the UK, Rs300m in the same time.

Conversion of part of the bonds into equity shares in

due course will allow the foreign shareholders in Dunlop to be brought below 40 per cent. Dunlop of the UK currently holds more than the 40 per cent allowed under India's Foreign Exchange Regulation Act (FERA).

The BAT stake in ITC stands to be reduced to 33 per cent, from 37 per cent. The funds will be used for modernisation and diversification in both companies, as well as to dilute overseas ownership.

The package is designed to attract all types of investors.

The expatriates investment plan was laid when interest in convertible debentures was waning following a slide in equity stock prices last year. Since the introduction of the scheme last April, the Government has amended it thrice to remove procedural hurdles. Blue chip companies such as Reliance Textiles Industries and the Birla-owned Gwalior Rayon have tapped the overseas Indian market to make convertible bond issues a success.

The Government plans to develop non-convertible debentures as a major instrument for mobilising public savings. The interest rate allowable on these debentures was increased in April to 15 per cent. Long term savings institutions, like the Unit Trust of India and Life Insurance Corporation stand

ready to buy whatever debentures are offered to them by the small investor, defined as having a portfolio of debentures worth Rs 40,000 or less. The relatively easy marketability should give them an edge over the general range of savings in India and long-term resources for up to 25 per cent of their working capital needs, instead of the present short term funds from commercial banks.

Long term savings institutions are assigned a key role in keeping the capital market in good shape. Besides conducting open market operations in debentures, they buy and sell corporate equities with a view to sustaining a healthy stock market.

**GH AT A GLANCE**

Advanced technologies are becoming ever more important in the face of rising costs for scarce energy and an increased consciousness of the environment. Within M.A.N.'s commercial vehicle division, four fabrication shops employing some 21,000 people are engaged in meeting pertinent requirements, whether at Munich, Salzgitter, Brunswick, or Penzberg. Each of these works is focussed on different targets in production, but every single one uses most advanced equipment and cost-effective fabrication methods. The results are commercial vehicles of world-wide reputation, including trucks from 6 to 40 tonnes with 90 to 440 HP (66 – 324 kW) power rating, as well as

buses and coaches for standard public service and touring. Commercial vehicles are to solve transport problems with a minimum of expenditure, which requires an optimum relation of capital investment, energy consumption, and working time. To satisfy this requirement, allowance must be made for the drivers' and customers' demands, the length and quality of the route to be covered, the nature and amount of passengers to be transported, and the mileage per year. Variable as these most differing criteria may be, they must be met by the existing transport capacities. M.A.N. therefore offers a wide range of commercial vehicles, in order to provide an optimum solution to every requirement in all industries.

The M.A.N. Group in the service of the world's economy:  
Some DM 18,000 million of order backlog.  
Annual turnover DM 18,900 million.  
Workforce about 87,600.  
Figures for the 1980/81 financial year:  
• DM 519 million for research and development.  
• Some DM 600 million for capital investments.

Supplies and services for:  
• the basic and producer goods industries,  
• the energy industry,  
• transport and mechanical handling,  
• communications engineering,  
• chemical and process engineering,  
• the construction industry,  
• the processing industry.

## Companies and Markets

## UK COMPANY NEWS

## Gus pays 5p as profits pass £82m at halfway

AN INCREASE of £15.7m to £82.1m in pre-tax profits is reported by the Great Universal Stores for the half-year to September 30, 1982. Turnover of this catalogue mail order business and multiple retailer rose from £863.24m to £927.43m, which included VAT up from £83.24m to £86.53m.

Principal subsidiaries of Gus include Art Wallpapers, British Mail Order Corporation (taking in Great Universal, Choice, John England, Family Album, Marshall Ward, John Myers, John Noble and Trafford), Burberry's, Cavendish-Woodhouse and the Houndsditch Warehouse Company.

The interim dividend is raised from 4.75p to 5p, the last year's total was 13p from record pre-tax profits of £189.16m. The dividend absorbs £12.51m (£11.51m).

The pre-tax figure was after depreciation higher at £20.97m compared with £17.74m. After tax of £36.8m (£36.02m), profit attributable to equity stockholders was £45.96m against £45.18m. This was after minorities of £17.00m (£19.00m) and preference dividends of £1.51m (£1.40m).

The provisions for deferred profit, service charges and collection costs in respect of hire purchase and other instalment receivables were £181.66m (£140.08m) at September 30, 1982. The figure was £147.16m (£140.07m) at March 31.

Stated earnings per 25p share improved from 18.17p to 18.36p at the year-end. On a CCA basis, pre-tax profits were £86.81m compared with £85.95m.

Mr Harold Bowman, assistant managing director, said later: "There is a world recession, and trading conditions are still difficult. As we indicated, the results for the first six months are marginally ahead after an increase of £4.4m in the deferred profit provision. However, a wonderful record and has shown increased profits every year for over 35 years."

## N. Brown maintains £1m dividend

Manchester direct mail order concern N. Brown Investments slipped marginally from taxable profits of £10.2m to £10.1m in the first half to August 28 on sales including VAT of £115.1m compared with £112.4m.

The interim dividend is being maintained at 2p net per 20p share. Mr David Alliance, chairman, says the rate of the final can only be considered when the full year's results are known and assessed. Last year a total of 6p was paid from pre-tax profits of £37.07m.

Mr Alliance says sales to date in the second half have been somewhat disappointing and not up to expectations. In the light of this uncertainty he feels that it would be irresponsible to attempt to forecast the outcome for the year as a whole. If there is any improvement on last year it will not be anything like as high as the rate of 40 per cent or so—achieved in the last two or three years.

Recruitment in the autumn/winter season is continuing at a relatively high level.

## BOC up 8% on little changed sales

PRE-TAX profits of the BOC Group rose by 7.9 per cent to £102.6m for the year ended September 30, 1982, compared with £95.1m previously. Sales moved up less than 1 per cent from £1.52bn to £1.53bn.

The results are calculated on a modified historical cost basis. In current cost terms, 1981-82 pre-tax profits were £105.5m, an increase of 9.4 per cent.

In 1982 changes were made to group accounting policies, the most important of which was the capitalisation of interest on major fixed asset additions. Also, exchange rate movements in the year were adverse compared with last year by some 12m.

If however there had been no changes in accounting policies, pre-tax profits would have been £98.1m, a rise of 6.1 per cent over 1981 on a comparable basis.

Earnings per 25p share, net of ACT, rose from 14.02p to 19.5p undiluted and from 13.62p to 17.78p diluted. Earnings on a nil distribution basis were up from 16.17p to 21.91p undiluted

and from 15.78p to 20.19p fully diluted.

The full year's dividend is being increased by 12.5 per cent from 5.11p to 5.74p per share, with a final of 3.14p (2.5p).

The board says that 1982 results reflect the serious economic deterioration in the U.S. and continued recession in the UK. Trading in Australia and South Africa, though showing an increase for the year as a whole, was affected by economic downturns which became evident in the second half of the year.

For the group as a whole sales have shown a satisfactory profit increase over 1981, while the health care business has increased substantially, notably in the U.S., where this business has not been affected by the recession.

By contrast, the carbon graphite and carbide activities have produced a much reduced profit, and losses have been recorded in the welding business as a result of depressed market conditions in the northern hemisphere. The

## HIGHLIGHTS

Lex today examines Guardian Royal Exchange spending of £50m on a 10 per cent stake in Hambro Life Assurance. Among the companies reporting yesterday BOC turned in a dismal advance from \$95.1m to £102.6m pre-tax for the year to September, accompanied by a difficult outlook for the current period. The mail order group GUS, despite the problems besetting the mail order sector, has managed to push up interim taxable profits by £1.6m to £82.1m. The column considers these figures and looks at the first figures from Argyle Foods since the Allied Suppliers acquisition, and shows a reduced level of gearing.

other businesses of the group traded satisfactorily.

Group trading profits for the year were up by £5.5m to £160.8m. After depreciation charges of £122.6m (£111.8m) and share of associates' profits of £2.7m (£2.6m).

Net interest payable was slightly lower at \$65.3m (£65.1m) from \$67.1m (£67.1m) while interest capitalised increased from £2.5m to £7.1m. Tax charge was reduced from £37.6m

to £27.6m, minorities took £10.5m (£11.2m) and after including extraordinary credits of £8.1m (£8.5m), disposable earnings showed through ahead from £48.9m to £70.6m.

The preference dividend again absorbs £0.1m and with ordinary payments costing £18.4m (£18.4m), the final dividend for the year was £51.1m, compared with £30m.

## Greenall Whitley down by 8%

PROFITS, before tax, of brewer, bottler and distiller Greenall Whitley were down from £22.5m to £20.1m for the 53 weeks ended October 1, 1982, an 8 per cent fall, but the dividend for the period is lifted to 3.68p net against 3.47p, with an increased final of 1.98p.

Turnover expanded by 15.9 per cent to £225.52m, compared with £194.92 for the previous 53 weeks, and trading profits rose slightly from £20.54m to £23.6m. However, after higher expenditure on repairs and maintenance, and charges—including interest up 50.3 per cent to £3.21m—profits were left £1.8m lower at the pre-tax level.

At halfway taxable profits had fallen from £9.67m to £6.46m. Mr Christopher Hutton, chairman, says that in the north-west of England and the West Midlands, trading conditions continued to be difficult, but Shipstone, in the East Midlands, performed well. G. & Greenall and Cambrian produced lower profits, but both are recovering.

GW Hotels maintained its level of profitability during the period and the chairman says that both The Bellamy at Sutton Coldfield, and Treadway Inns, the U.S.

hotels, are proving to be satisfactory investments.

The newly-acquired Arrow-smith Holidays incurred a loss for the period, although the group is hopeful that eventually it will prove to be a good investment. Mr Hutton adds that it is too early to forecast the rest of this side in the current year.

Above the line repairs to properties cost £3.1m (£4.77m), depreciation took £5.5m (£4.79m), interest receivable was £254.00m (£258.00m) and redundancy payments amounted to £266.00m (nil). There was also a surplus on the disposal of properties of £10.6m (£14m).

After tax charges of £2.7m (£7.62m) earnings per share are shown as 12.2p, against 13.06p. The retained balance was £25.5m, compared with £10.67m after preference payments of £38.00m (same) and ordinary dividends of £4.12m (£3.82m).

comment

Having seen losses mount at the holiday business Saga bought from the Laker receivers, there was a certain amount of market apprehension about the impact Arrow-smith might have had on

Greenall. Arrow-smith is obviously rolling in red figures but shareholders will have to wait for the full accounts to see how bad they are. But anyway the group's overall profit lived up to outside expectations and the share price rose to 122p. Not that the first earnings drop in over a decade is a particularly impressive achievement. Yet, while Arrow-smith may catch the interest, Greenall's fortunes are well and truly pegged to beer sales which account for 80 per cent of profits. With national beer volume down 4 per cent and Greenall concentrated in the more difficult north-west, the group had very little chance of holding its own in the brewing market.

Still, shipstone considered part of the problems of its less fortunate colleagues in the Greenall stable with both higher preference dividends and a dividend which is a handsome profit boost. Relative to the sector Greenall's shares might qualify for this year's wooden shoe award, regarded as a "sack" regional group's rating has drifted to put it more in line as a mini-national. The yield of 4.4 per cent and a dividend of 12.2p earnings is unlikely to encourage an upward rating.

comment

With the much needed "stay of execution" by its bankers in October, Borthwick was given another year in which to gain full reprieve. While it will continue to spend the time trying to get its own operations further monetised, it will depend on external factors. If demand for meat and meat products remains flat throughout the world then it will have to hope for a capacity reduction among its competitors. The delayed Iranian contract provided some useful assets in the second half and talks are proceeding towards the next one. It has also been fortunate to have its Australian activities based away from the drought areas. The much needed cut in borrowings is derived partly from debtor reduction and asset sales, but there is also a less permanent element of currency translation as half its £82m debts are in Australia and New Zealand. But with borrowing funds there must be much hold-out of breath over interest rates. Last year substantially higher pushed charges up £200,000 to £12.3m. Next time the tax figure should benefit from offsettable losses and a significantly lower charge in U.S. if not in France. Yesterday shares fell 2p to 13p capitalising the group at 28.7m.

comment

With new accounts worth over £50m—including British Airways and Avis—Saatchi has achieved an unenviable 20 per cent increase in billings for the fourth consecutive year. It has also included a full year's figures from the autonomous Dorland group for the first time, which has added another £2m to the company's billings. These additions have boosted reported turnover and have added about £1.5m to pre-tax profits, bringing £7m of this coming from Compton. Net interest income has remained at £0.8m since the benefit of higher cash balances has been offset by lower interest rates and by the servicing charge for one quarter of Compton's £7m debt. The Dorland group's profit margins have increased from 1.5 to 2.4 per cent since its acquisition and Saatchi, whose own UK agency still enjoys a 3.5 per cent margin, is now hoping to see comparable gains in its subsidiaries under the international network where margins are still around 1 per cent. A start has been made here with the consolidation of two loss-making U.S. subsidiaries and the sale of Compton's troubled Danish operation. Meanwhile, Saatchi's net cash position is up to £23.5m—which includes £8.5m set aside to cover deferred payments for the Compton acquisition—and fresh loans of £18m are now available to help fund more additions to the international agency network, of which Saatchi has set its sights.

These additions have boosted reported turnover and have added about £1.5m to pre-tax profits, bringing £7m of this coming from Compton. Net interest income has remained at £0.8m since the benefit of higher cash balances has been offset by lower interest rates and by the servicing charge for one quarter of Compton's £7m debt. The Dorland group's profit margins have increased from 1.5 to 2.4 per cent since its acquisition and Saatchi, whose own UK agency still enjoys a 3.5 per cent margin, is now hoping to see comparable gains in its subsidiaries under the international network where margins are still around 1 per cent. A start has been made here with the consolidation of two loss-making U.S. subsidiaries and the sale of Compton's troubled Danish operation. Meanwhile, Saatchi's net cash position is up to £23.5m—which includes £8.5m set aside to cover deferred payments for the Compton acquisition—and fresh loans of £18m are now available to help fund more additions to the international agency network, of which Saatchi has set its sights.

comment

With new accounts worth over £50m—including British Airways and Avis—Saatchi has achieved an unenviable 20 per cent increase in billings for the fourth consecutive year. It has also included a full year's figures from the autonomous Dorland group for the first time, which has added another £2m to the company's billings. These additions have boosted reported turnover and have added about £1.5m to pre-tax profits, bringing £7m of this coming from Compton. Net interest income has remained at £0.8m since the benefit of higher cash balances has been offset by lower interest rates and by the servicing charge for one quarter of Compton's £7m debt. ## 52% jump to £5.5m by Saatchi &amp; Saatchi

SOLID PROGRESS in its UK base and a first time contribution in the final quarter from Compton Communications in the U.S. raised pre-tax profits of Saatchi & Saatchi Company, advertising agency, to a record £5.5m for the year to September 30, 1982.

This result represents an increase of 52 per cent over the previous year's £3.62m and compares with a forecast of not less than £5.2m made at the time of the Compton acquisition. Another record year is expected in 1983.

A final dividend of 5.2p net per share is recommended, compared with the circular forecast in May of a minimum of 4.5p, and this makes a total payment of 8.7p (8p). A one-for-two scrip issue is also proposed.

Turnover showed a marked advance from £102.1m to £208.2m, against the forecast of not less than £251.1m. Net sales of £182.5m, after tax of £12.7m (£10.94m), minorities of £47.0m (£10.00m) and extraordinary credits of £10.00m (£10.00m).

Earnings per 10p share climbed from 19p to 28.8p before extraordinary items and from 16.7p to 25.7p.

The board reports that considerable progress is being made in the U.S. and internationally towards the objective of achieving a higher level of operating efficiency over the next few years.

Three loss-making Compton subsidiaries are now being merged or sold, and two others are anticipated to make a small profit following cost-saving measures.

The board says the company had a strong position in cash and deposits at the year-end. Net cash had risen to £23.5m from the pre-forma position of £17.2m detailed in the acquisition. The company has negotiated a new multi-currency facility with its bankers of £18m, which is as yet unutilised. These measures will be available to develop business around the world both organically and by acquisition.

## UK COMPANY NEWS

## Comtech £1.4m loss at midterm

A SECOND quarter loss of £0.97m left Combined Technologies Corp. with a pre-tax deficit of £1.4m for the six months to September 30 1982. Comparative half-year figures are not given as the group did not commence trading until July 1 last year. Loss in the three months to end September 1981 was £0.88m.

The commercial division of this high technological group turned in an operating profit of £2.6m, after a slow-down in the second quarter to £1.16m. Net interest payable however, took £1.53m and research and development expense reached £2.37m, with expenditure of £1.36m in the second quarter.

There was no tax for the period and loss per 10p share came out at 2.3p.

Commenting on the figures, Mr James Longcroft, the chairman, says the increase in the R & D expense reflects the strong emphasis placed by the company on its research and development programme.

Events in Minnesota, the company's information systems venture, have been dominated by the public launch of this subsidiary's first product—Memos System 6000. The reception was very favourable, the chairman states.

Sales and marketing effort for System 6000 in the automotive, aerospace and Government-related industries in the U.S. and Europe have been intensified, and the board's confidence in the long term prospects for System 6000 has been further strengthened by responses on both sides of the Atlantic.

Conversion of customer interest into firm orders may take from six months to a year from the point of original contact, Mr Longcroft points out. Outside Minnesotas, Comtech's central new products unit is controlling a number of promising product developments.

The market for the traditional

## ● comment

The movement in the shares of Combined Technologies Corporation resembles nothing so much as a roller coaster. Virtually a penny rise in the year they moved from 36p to 68p last week, and in the first half of this week came most of the way back. Yesterday they gained 9p to close at 85p. All the profits are generated by the commercial division but it is the Minnesotas System 6000 that has kept the jobbers busy. Comtech and VW have been talking for 14 months about a possible \$70m deal, and Comtech is clearly tiring of jaw-bating. There are two potential customers showing the same level of interest as VW, and one of them is described as "astronomically big". If VW does finally take the plunge, then Comtech will be looking to raise money by April, if not, then, even though it is currently about 90 per cent geared, Comtech can work off existing credit lines until September. Then Comtech will be at the crossroads. One path, including Comtech and VW, is to sell off all or part of its non-technical businesses. An exciting possibility is the prospect of the company's information systems unit. Watch this space.

## Control Secs. advances

Pre-tax profits of Control Securities for the six months to September 30 1982, improved from £544,000 to £656,000 and the directors say, taking into account higher property income and development costs, the outlook for the year is encouraging.

Basic first-half earnings per 10p share were stated at 2.74p (2.61p) and the net interim dividend is effectively raised from 1.18125p to 1.575p. Last year's total payment was equivalent to 2.745p on profits of £1.01m.

Turnover for the six months, jumped from £1.53m to £2.2m. It was made up of gross rental

income £229,000 (£203,000) and other income £2,96m (£1,53m).

Pre-tax profit was derived as to about a third from property income, a quarter from property deals and the rest from other activities, including the Netherlands based investment trust Immotrust.

Tax took £132,000 (£106,000), minorities totalled £4,000 (£1,000) and there were no extraordinary items this time compared with a credit of £1,000 in the corresponding period.

## Devenish lifts dividend

Although pre-tax profits at J. A. Devenish were down from £1.89m to £1.54m in the six weeks to October 1 1982, the final dividend is raised from 6.25p to 7.25p net for an increased total of 9.5p compared with 8.5p.

Turnover of the Weymouth-based holding company with interests in brewing, beer bottling, mineral water manufacturing and wholesaling and retailing of these products,

together with management of hotels and off-licences, improved from £15.35m to £21.94m.

Tax was lower at £418,000 (£699,000), and there was an exceptional tax credit of £227,000 (£282,000). Extraordinary credits totalled £233,000 (£192,000), being property disposal profits.

Earnings per 25p share were up from 32p to 38.5p before exceptional credits. Comparisons covered a 53-week period.

## Baggeridge recovers

Group turnover was ahead at £5.22m compared with £5.06m. Tax was down from £211,000 to £167,000. There was an extraordinary credit of £875,000 this time, being profit, less costs and tax, on the sale of freehold land.

The directors say a surplus of £503,246 arises on revaluation of the remaining land as at September 30 1982, and this has been credited to reserves.

Earnings per 25p share rose from 4.84p to 8.02p.

## Sidlaw leaps to £4.23m: lifts payout

Taxable profits of Dundee-based Sidlaw Group, provider of services to the North Sea oil and gas industry and jute and synthetic yarn spinner, almost doubled from £2.14m to £4.23m in the year to October 1 1982 after a second half surplus of £2.5m, compared with £1.89m. Turnover for the 12 months advanced from £31.33m to £36.22m.

The final dividend is being raised from an effective 5p (following a one-for-two scrip) to 9.5p net per 50p share making an 80 per cent higher total of 13p (6.5p) adjusted. Earnings per share are given as 38.41p (24.85p).

A breakdown of operating profits of £4.88m (£2.96m) shows: oil services £3.45m (£2.63m); textile £1,767,000 (£1,533,000); and associate £431,000 (£378,000). Interest payable took £249,000 (£174,000), after an increase in borrowings during the year of £327,000.

The directors say the textile performance in a period of severe recession deserves special note, but the emphasis must lie in the continued and consistent growth of the oil services division.

Tax took £293,000 (£17,000 credit) leaving attributable profits of £3,34m (£2.17m) after extraordinary debit of £9,000.

## Arlington Mtr rises sharply to £506,000

Taxable profits of Arlington Motor Holdings, provider of motor services, recovered sharply from £174,000 to £506,000 in the 26 weeks to September 28 1982 on higher turnover of £32.91m, compared with £25.58m. Latest management accounts show a continuation of the level of trading experienced during this period but with continuing uncertainty about the future of the directors say they cannot forecast the results for the full year.

They point out that the turnaround in the group's performance proves that their development policies were justified and explain that the exceptional results were achieved from sharp profit upturns in the Vauxhall/Bedford and bus and coach activities together with smaller losses in the Land Rover and other operations.

The net interim dividend is maintained at 2.5p—a fall of the same amount was paid in the 1981-82 year when the group ended £20,000 in the red.

Interest charges for the first half this time took £399,000 (£399,000), and tax £100,000 (£100,000). Attributable profits emerged at £768,000 (£37,000 loss) after including an extraordinary credit of £310,000 being a surplus on the remaining part of the group's premises at Chadwell Heath. No provision was made for any Development Land Tax liability that may arise.

Stated earnings per 25p share amounted to 10.2p, against a previous loss of 0.5p.

## ABE hit by higher interest at six months

Representing the first period in which the group has been able to see the results of major changes undertaken in the last three years, Associated British Engineering says its turnover over from £4.97m to £16.84m for the six months ended September 30 1982 but after much higher interest, profits were down to £280,000 at the pre-tax level, against £237,000 last time.

Mr A. R. Belch, chairman, says that as forecast there were "major advances" in turnover and operating profits—up from £406,000 to £724,000—but there was the effect of the costs of financing the acquisition of Dawson-Keith. Interest charges for the six months amounted to £357,000, compared with £75,000.

ABE is now a group of distribution and trading companies in which traditional engineering represents less than 10 per cent of turnover. An analysis of total turnover and operating profits shows: distribution £9.94m (£7.2m); engineering £1.6m (£1.2m) and £214,000 (£212,000).

The interim dividend was increased from 0.75p to 0.35p—last year's final was 0.275p and pre-tax profits amounted to £798,000.

Pre-tax figure for the six months included associates share of £13,000 (nil). There was no tax figure (£26,000), minority interests took £45,000 (nil) and after extraordinary debits £18,000 (£47,000) and preference payments of £1,000 (same), the attributable balance came through at £203,000, against £240,000.

## Stenhouse improves to £8.8m and lifts payout

PRE-TAX PROFITS of Stenhouse Holdings improved to £8.8m for the year to end September 1982, compared with £8.73m previously, and a final dividend, increased by 0.22p to 3.5p, makes a total of 8.5p net against 5.1p.

Reed Stenhouse, the international insurance and reinsurance broking group in which Stenhouse Holdings has a major stake, also showed increased results of £14.98m (£14.69m) pre-tax but profits attributable to Stenhouse Holdings were virtually unchanged because its share of equity was reduced by 1.16 per cent to 52.53 per cent.

Insurance broking results benefited substantially from the strength of other currencies particularly the Canadian dollar. This offset the adverse effect on earnings of the difficult economic conditions in Canada which experienced throughout the year.

Conditions are expected to remain difficult with margins under pressure. Present indications are that Reed Stenhouse will maintain profits in the coming year in Canadian dollars. They are expected to broadly follow the pattern of 1981-82.

The Lloyd's underwriting agency companies produced a profit of £1.03m of which Stenhouse Holdings' 81 per cent share amounted to £835,000 (£844,000).

These profits, which include a full year's results of the companies acquired in June 1981, are considered highly satisfactory and further improvement should be seen in the coming year.

With the benefit of these higher profits and on the assumption of no material appreciation

of the pound against the Canadian dollar, this would result in "somewhat improved profits" of Stenhouse Holdings. Pre-tax profits of Stenhouse Holdings for 1981-82 included a same-gain contribution of £270,000 from associate Noble Grossart and were after allowing for holding company net expenses of £11,000 (£133,000). Tax paid rose to £4.82m (£4.45m).

Extraordinary debits amounted to £1.11m (£1.86m credit) leaving a surplus of £2.94m, compared with £5.14m.

Stated earnings per 25p share emerged lower at 10.66p (11.27p) before extraordinary items.

The group's Lloyd's underwriting agency activities were expanded in 1981 by the acquisition, for a cash consideration of approximately £2.1m, of four Lloyd's underwriting agency companies. These companies were merged with the group's existing Lloyd's underwriting agency company, Stenhouse Reed Shaw (Underwriting Agencies), under a new holding company, Stenhouse Reed Shaw & Partners.

Owned 60 per cent by Stenhouse Holdings and 40 per cent by Reed Stenhouse through Reed Stenhouse & Partners.

The profits reported for the Lloyd's underwriting agency companies represent the share of these profits attributable to Stenhouse Holdings' direct and indirect interests. Last year, the profit of Stenhouse Reed Shaw (Underwriting Agencies) for the period to June 30 1981 was reported as part of the insurance broking profits.

● comment

Stenhouse's interest in insurance

broking is held through a £2.5 per cent stake in the Toronto-based group Reed Stenhouse which reports quarterly. So there were few surprises in store in yesterday's results and the share price slipped just 1p to 82p.

For several years Reed Stenhouse has been on a growth path which has entailed a steep rise in its expenses with systems development in the UK and Australia and acquisitions in the U.S. But with premiums depressed by chronic overcapacity the group has had difficulty in keeping fees growing.

Stenhouse specialises as a "retail" broker dealing in local currencies around the world, rather than in the international reinsurance business, and so exchange rates are crucial.

The strength of the Canadian dollar this year has meant a 15 per cent decline in the pre-tax profits announced across the Atlantic and nearly £1m should be knocked off the UK profit figure to obtain a more accurate picture of the decline in the brokerage division.

By contrast the troubled Christopher Moran agencies made a substantial contribution to Stenhouse's rising profits from its Lloyd's underwriting activities. And, although the chairman said he was "actively considering" a divestment of the Lloyd's

deadline five years hence in view of the troubles, Stenhouse must be tempted to hold on for rapid profits growth in the short-term. With a long-awaited turnaround in the U.S., profits could rise 10 per cent this year for the group, giving a prospective fully-taxed p/e of 7.5.

Stenhouse's interest in insurance

## Brownlee rises to £0.8m

GLASGOW-BASED timber merchant Brownlee increased first-half taxable profits to September 25 1982 from £452,000 to £784,000 after a 10 per cent rise in turnover of £1.25m to £13.63m.

And with earnings per 25p share given higher at 4.7p (2.3p) the interim dividend is being raised to 1.5p net (0.7p).

Though the directors say this is "to reduce the disparity between it and the final,"

In the last year a total distribution of 3.7p was made from pre-tax profits of £468,000.

Mr J. F. McLelland, chairman, says the company's unwillingness to trade at unrealistic margins produced satisfactory results. In the absence of substantial new housebuilding activity in Scotland, its established policy of catering for the modernisation, renovation and improvement market by offering an ever-

extending range of products continued to attract business.

The remaining associated company, Burnbank Joinery Centre continues to trade profitably.

Mr McLelland says trading conditions in Scotland continue to be depressed with only a few sectors showing any improvement. In these conditions, he says, it is encouraging to see some hopeful signs in the company's markets but success will depend on its continued awareness of market trends and its ability to adapt to them.

Taxable profits were struck after interest payable of £25,000 (£13,000) and included associate earnings of £14,000 (£143,000 losses) this time around being due to the exclusion of the Smurfit Corrugated Cases results.

Tax took £285,000 (£210,000), leaving net profits of £499,000 (£242,000).

## Second half slowdown at Irish Distillers

Pre-tax profits of the Irish Distillers Group finished the year to September 30, 1982 £2.19m higher than the previous year at £27.64m but as reported in the interim report growth slowed in the second six months when the surplus rose by only £1458,000 to £23.19m.

Stated earnings per 25p share rose from 11.88p to 16.44p and a final dividend of 3.5p (2.18p) raises the net total to 5p, against 3.05p last time.

Group turnover expanded by £8.49m to £132.05m. Trading profits advanced to £14.12m (£11.52m) but these were subject to depreciation of £2.05m (£1.8m) and interest charges of £5.47m (£4.22m). Share of profits of associates declined to £49,000 (£56,000).

## Crystalate soars 72% and pays more

FOR THE 12 months to September 30 1982 Crystalate Holdings, the electronic components and equipment group, returned pre-tax profits 72 per cent ahead at £2.39m, compared with £1.39m the previous year, with £1.52m, against £179,000, coming in the second half.

Basic earnings per 5p share rose from 5.24p to 8.28p, excluding an exceptional tax credit last year, and the dividend for the year is being increased by 0.67p to 3.42p net by a final of 1.54p.

Mr John Leworthy, the chairman, says against the background of a substantially changed product range over the past two years he is confident of the group's ability to continue recent progress with various new products such as the Sceptre telephone.

Turnover for the past year rose from £14.48m to £20.78m. Sales of the group's principal subsidiary, A. P. Besson, were boosted by production of the new Electro microphone capsule adopted by British Telecom for standard telephone handsets, plus continuing demand for traditional receiver and microphone capsules.

Tax charge for the year took £1.15m (£806,000), but attributable profits came through lower at £1.23m, compared with £1.31m—last year's figure included an exceptional tax credit of £334,000.

## ● comment

For a company whose shares traded below 3p in the mid-seventies and yesterday closed at 168p little needs to be said about the effectiveness of the changes that have come about at Crystalate. The company is now considering financing acquisitions — two are under discussion at the moment — by a placing to widen the market in its shares though, with almost nil gearing it would be well able to fund such deals. While past purchases have not been entirely happy in the short term the group sees this as a path to higher technology emphasis.

Yet without this input it already has, through Besson, a reputation and skills on which to build. Ironically after long heavy dependence on British Telecom's ordering pattern it is that organisation's easing of restrictions on telephone equipment that is providing the means to reduce that dependence. For the current year growth on both sides of the business is set to continue. A strong order book and expected orders, with a shift to more total equipment manufacture, is likely to more than offset any erosion of margins by competition. An advance of 25 per cent would not be unreasonable putting pre-tax profits around £3m and the prospective p/e below the electronics glamour ratings at 17.

Mr John Leworthy, the chairman, says against the background of a substantially changed product range over the past two years he is confident of the group's ability to continue recent progress with various new products such as the Sceptre telephone.

Turnover for the past year rose from £14.48m to £20.78m. Sales of the group's principal subsidiary, A. P. Besson, were boosted by production of the new Electro microphone capsule adopted by British Telecom for standard telephone handsets, plus continuing demand for traditional receiver and microphone capsules.

Tax charge for the year took £1.15m (£806,000), but attributable profits came through lower at £1.23m, compared with £1.31m—last year's figure included an exceptional tax credit of £334,000.

There is no interim dividend on the ordinary shares (1981 nil).

Less interest	58.2	62.2	58.2	62.2
Profit before tax	102.6	95.1	105.5	96.4
Less tax	27.6	37.6	27.6	37.6
Less minority interest	10.5	11.2	10.9	11.5
Earnings	64.5	46.3	67.0	47.3
Earnings per share (net basis)	17.78p	13.62p	17.86p	13.76p

● The BOC Group announced today that pre-tax profits for the year ended 30 September 1982 were £102.6 million, an increase of 7.9% over the comparable figure for the previous year. These figures are calculated on a modified historical cost basis. In current cost terms, 1982 pre-tax profits were £105.5 million, an increase of 9.4%. Sales rose less than 1% from £1,521.7 million in 1981 to £1,534.2 million in 1982.

● In 1982 changes were made to Group accounting policies, the most important of which was the capitalisation of interest on major fixed asset additions. Also, exchange rate movements in the year were adverse compared with 1981 by some £2 million. If there had been no changes in accounting policies, pre-tax profits would have been £96.1 million, an increase of 6.1% over 1981 on a comparable basis.

● Earnings per share (net of ACT and fully diluted) rose from 13.62p in 1981 to 17.78p in 1982. The Group Board has decided to increase the dividend for the full year in line with the increase in interim dividend. The increase for the year is 12.3%, following an increase of 10% in 1981.

● The annual report will be issued during January 1983 and the annual shareholders' meeting will be held on 9 February. Books close on 3 March for the final dividend which will be payable on 5 April.

The 1982 figures are unaudited. The figures for the year to 30 September 1981 have been abridged from the full group accounts for that period, restated for changes in accounting policy. The 1981 accounts received an unqualified auditors' report and have been delivered to the Registrar of Companies.

## Companies and Markets

## COMMODITIES AND AGRICULTURE

## Coffee down again

COFFEE prices on the London futures market fell sharply again yesterday with the March quotation closing 57¢ down at £1,556.50 a tonne.

In recent weeks the market has been seen-sawing as upward and downward "corrections" have followed overdone movements.

Yesterday's downturn was attributed to the market's failure to break through a resistance level at £1,630 a tonne following a three-day rise amounting to nearly £100.

ALUMINIUM consumption in the West is likely to increase by 50 per cent by 1990, according to a report published in the Zurich-based Swiss Aluminium Review, writes John Wicks from Zurich. The report sees demand growing at an average annual rate of only 2 per cent to 3 per cent in industrialised countries, but 7 per cent to 8 per cent in developing countries.

JORDAN has opened a large fertiliser complex on the Red Sea to turn a quarter of the phosphates mined in the country into fertiliser. Phosphates were Jordan's only profitable export last year, with a value of \$150m, and it is hoped the new complex will earn Jordan \$170m a year.

BARLEY exports from Australia in the 1982-83 crop year are expected to slump from 2m tonnes last season to 470,000 tonnes because of the drought reduced harvest.

INDONESIA is to have its own commodity exchange in Jakarta, Indonesian traders have said. The exchange is expected to come into being in six months, although a report that President Suharto signed a decree authorising the exchange earlier this month has not been confirmed officially.

MILK MARKETING Board has released its latest edition of EEC Dairy Quota and Figures for 1982. The publication gives comprehensive details of dairying in the EEC countries going back as far as 1960.

## Lead at 6-year low

BY JOHN EDWARDS, COMMODITIES EDITOR

LEAD PRICES dropped to the lowest level since August 1976 on the London Metal Exchange yesterday as markets generally came under selling pressure.

Cash lead closed 47.5 lower at £268 a tonne, making a loss of £14.5 so far this week.

The market has been depressed by continued selling from the U.S., where lead stocks are reported to be building up in the face of poor demand. Speculative selling yesterday was triggered off when the three-months quotation broke through an important chart point of £285 and fell to £278.75.

Aiding the downturn in lead was an earlier trend in its sister metal, zinc, where the cash price fell 25.25 to £106.75 a tonne.

The market was hit lower by news that Asarco had lowered its U.S. producer selling price to \$2.00 a lb, and that Prayon of Belgium planned to reopen its smelter at Elzein. The plan to reopen comes just when European smelters are attempting to persuade the EEC Commission to agree to a scheme for the

## Higher crop prospects hit sugar

By Richard Mooney

THE WORLD sugar market came under renewed pressure yesterday as established "bear" sentiment was heightened by reports of rising production trends in India and Europe.

In the morning, the London daily raw sugar price was fixed 5¢ down at £102 a tonne and on the London futures market the March position ended the day 27.5¢ down at £115.10 a tonne.

In New Delhi, the Indian Sugar Mills Association reported that output in November 15 totalled 234,000 tonnes, up from 234,000 at the same time last year. Meanwhile West German sugar statistics for October showed a production estimate from 31,135m tonnes to 31,461m.

Licht's EEC output estimate was lifted from 14,422m tonnes to 14,556m while Poland's was raised from 1,624m to 1,628m. The Dutch figure was reduced to 7.1m tonnes from a first estimate of 7.5m.

## Campaign against Dutch produce

Financial Times Reporter

THE Women's Farming Union, which spearheaded the campaign against imported French apples, now plans to do battle with Dutch horticulturalists.

The campaign is to present the glasshouse growers' case to Mr Peter Walker, Agriculture Minister, and draw the British public's attention to the advantages of buying British produce when it is available.

## FARMER'S VIEWPOINT

## Between Scylla and Charybdis

MR RICHARD BODY, MP is a Conservative member of Parliament for an agricultural constituency and has been a farmer in his time. Even so he has not shrunk from attacking most of the policies and institutions which govern British agriculture today.

The Common Agricultural Policy is an obvious target, distorting trade with former suppliers in the Third World and elsewhere, pushing up the price of food so that the consumer is buying and eating less.

This is fair comment and to be expected from a well known anti-statist. It would be the same point made by many others. But then he switches his attack to British farming, without underlining the point that he has not joined the Community ten years ago because he still has been farming under the system of deficiency payments and standard guarantees which he attacked so vehemently in his pamphlet written in 1965, a copy of which he was good enough to send me.

He then recommended a policy of expansion and protection from imports so that British farmers could produce more potential. Someone, somewhere, was obviously listening, and the

present policy could well be the answer to Mr Body's prayers. But he has now completely changed his tack. He has become an enthusiastic free trader, wishing in fact to go back to the repeal of the Corn Laws and would welcome the situation as we had in the period 1919 to 1939. Most of us farming then took a very different view from his.

In 1931 British farming was almost unprotected. It is true that the importation of cheap food was encouraged, livestock farming was a period when I started myself, but was only able to do so because by pre-decessor's assets of land, livestock and equipment had been passed on to me.

That was the time when farms were amalgamated into bigger units without any help but the bankruptcies of their previous occupants. Those who have left in the past ten years should at least have gone out solvent.

Nor did the benefits of absolute free trade reach many of the supplying countries. I spent from 1928 to 1932 in New Zealand and Argentina where conditions were much worse for the farmer than here. He was far from happy at the time.

He claims that large areas of Grade Three land are now

## Australian wheat exports

MELBOURNE — The Australian Wheat Board said wheat exports in 1981-82 to November 30 rose to 12.6m tonnes from 9.45m tonnes the previous year.

However, the provisional total for July, the shortest of the year, was only 1.2m tonnes, the shipping year which was disrupted in the early months by a series of severe labour disputes.

It was also under the record export total of 13.5m tonnes reached in the 1979-80 year.

## Chinese grains record forecast

BY JOHN WICKS IN ZURICH

CHINESE grain and oilseed production is likely to reach a record volume of some 336m tonnes this year, according to a report issued by Cargill International Services.

With this total, the rice crop is seen as reaching a record 146.5m tonnes as well as 143.2m tonnes last year and 143.75m tonnes in 1979. The report says that over

the period 1977-82 Chinese rice production has averaged an annual growth rate of 2.7 per cent.

In spite of a drought in the northern provinces, wheat production is expected to yield 10.5m tonnes, which is below 1979's record of 62.73m tonnes but almost 1m tonnes up on the 1981 crop. Favourable planting conditions are expected to yield a 1983 crop of more than 60m tonnes. Future growth in Chinese wheat imports may be

limited, says Cargill, which points out that since 1977 there has been a growth in production equal to an average 8.9 per cent per year.

Coarse grains production is put at some 33.6m tonnes for 1982, above last year's levels but below the 1980 record crop of 84.8m tonnes. In line with government plans to increase livestock breeding, the report anticipates a possible gain in coarse-grain imports in the future.

## GOLD MARKETS

Gold fell 57½ to \$436.437½ in the London market yesterday. It opened at \$442.50 in the morning, and was fixed at \$442.50 in the afternoon. The metal touched a peak of \$443.44, before falling to a low of \$434.45 on selling from New York.

In Paris the 12½ kilo gold bar was fixed at \$442.50 per kilo (\$442.50 per ounce) in the afternoon, compared with \$442.50 (\$442.50) in the morning and \$442.50 (\$442.50) Wednesday afternoon.

In Frankfurt the 12½ kilo bar was fixed at DM 34,520 per kilo (\$444.12 per ounce), against DM 35,050 (\$448.97) previously.

## SCOTLAND II

## Where Labour is entrenched

THE LATE John Mackintosh, who was for a time the Labour MP for Berwick and East Lothian, told a story. In 1975, when Labour was in power, he was invited to lunch by a Minister at the Civil Service Department in order to meet officials.

Before any introductions Mackintosh asked a senior civil servant what he did. "Oh," said he with a grimace, "I'm on the devolution caper."

"Do I take it," Mackintosh went on, "you would define the

been any sign of recovery since.

There have been three parliamentary elections in Scotland this year. The first, in Glasgow Hillhead, was exceptional in that it was contested by Mr Roy Jenkins, the leader of the Social Democratic Party, and was therefore seen as more of a local one. Mr Jenkins won, taking the last remaining Tory seat in Glasgow in the process. The SNP fared badly.

The two others were in Southside and Airdrie and

There is no evidence yet of such a conscious grouping. Indeed the Labour Party in Scotland has always been divided in its attitudes to devolution and there have always been rivalries between Scottish and northern English MPs in their competition for funds for investment. It was the north-eastern MPs who were among those most opposed to devolution in the first place because they believed it might give Scotland a special status.

Also, the feudalism of Scottish politics can scarcely be underestimated. The main Labour argument in the Queen's Park by-election was over whether the seat should be inherited by the late MP's wife or by his agent. The rivalry between Labour and the SNP can hardly be understated either.

Yet in many ways the problems of Scotland remain the same as they were in the years of devolution fever. There is a demand for a more separate identity to be expressed in political terms. Being in Scotland feels different from being in England, however hard it is to define.

Two great economic changes have taken place in Scotland in the last few years. The first is North Sea oil which, on most estimates, seems to have created an extra 100,000 jobs. The second, and related, change is that Scottish unemployment is no longer conspicuously higher than English. It used to be nearly double.

It was the promise of North Sea oil coupled with the disenchantment of the Scottish people at the performance of the British economy presided over by the Government in London which led to the rise of Scottish nationalism.

The spin-off from oil in terms of jobs may have brought a respite. But the dominance of the Labour Party in Scotland suggests that very little credit is being given to Mrs Thatcher.

Mr George Younger has been a very conscientious Secretary of State, assiduously looking after Scottish interests, but Scotland is not on the whole Tory country.

What needs to be watched in future is how far the Labour Party will seek to take over the old role of the SNP.

Published in John P. Mackintosh on Scotland, edited by Henry Drucker, Longman.

## Politics

by Malcolm Rutherford

word 'caper' as an essentially silly and meaningless performance conducted simply for the effect it has on those watching.

"That sums it up perfectly," he replied.

In a sense the official turned out to be right, though not in the way he intended. Devolution came to dominate British politics in the second half of the 1970s. It was taken with deadly seriousness by Mr Callaghan's administration if only because it was feared that if the Government could not deliver something, the Labour Party would be decimated in Scotland by the continuing advance of the Scottish Nationalist Party.

Yet the attempts to give the Scots a greater say in their own affairs also boomeranged. The Government could not control the Parliament in Westminster. All sorts of clauses were inserted into the legislation calling not only for a referendum but also for a 40 per cent majority of the electorate if the proposed Scottish Assembly was to be allowed to go ahead.

In the event such a majority was not forthcoming. Not only did devolution not proceed: the referendum result contributed to the fall of the Labour Government.

Something else happened, too. The collapse of devolution did not lead to the forward march of the Scottish Nationalists. On the contrary, the SNP won only two seats in the general election of May 1979 against the 11 which they had captured in October 1974. Nor has there

Glasgow Queen's Park. In each case Labour held on comfortably to the seat, though there was also the sort of low turnout which has become typical of British by-elections since the outbreak of the Falklands crisis and which makes predictions about the outcome of a general election more than usually hazardous.

One prediction, however, seems safe. Scotland is entrenched Labour territory. There are 71 Scottish seats in the present Parliament; the number will go up to 72 in the next if proposed boundary changes are approved. Labour holds 42, the Tories 21, the Alliance 6 and the SNP 2. Nothing has changed since Mrs Thatcher came to office suggests that this Labour dominance will be challenged.

Thus the most interesting question in Scottish politics is becoming the role of the Labour Party, especially if there continues to be no resurgence of the SNP. The question becomes even more intriguing if it is postulated that the Labour Party in England continues to lose seats while the Labour Party in Scotland gains.

Add to that the possibility that the Labour Party goes on holding its ground in the north of England while making further losses in the south. There may well be a preponderance of northern English and Scottish Labour MPs who could seek to dominate the party, if only by arguing that at least they continue to win their seats.

General: Market capitalisation unless otherwise stated, is the average for June 1982. Employment figures are weekly average employees for the UK during the financial year. Sector breakdown is based on FT Actuates grouping.

## Stronger role for venture capital

ONE OF Scotland's basic economic problems is slowly being nailed down by part of the financial community.

Weakness in managerial talent has been instrumental in the faltering growth of a new crop of businesses and industries which Scotland has been counting on for expansion.

The high technology industries in particular are, quite frequently, based on good ideas but lack the management and entrepreneurial know-how to lift themselves safely out of early, first phase, research and development into second phase commercialisation.

To counter this the venture capital sector of the financial community in Scotland has taken a more active role, developing a "hands on" approach to management, as a means of steering new business towards profitability.

Venture capital takes on a wider meaning in Scotland than

in the City of London or the U.S. It covers not only the high-tech industries which are the main targets of venture capital in the U.S. but other types of business struggling in what is often an unfriendly economic environment.

The country's distance from

Finland, as a means of creating foundations for indigenous industries. Venture capital both from the private and public sector has responded to this need.

Prominent in the field are both the Industrial and Commercial Finance Corporation

and the Scottish

Development Agency. Finance houses and banks have also become increasingly willing to become involved with managerial problems.

ICFC which is owned largely by the English and Scottish clearing banks, with a 15 per cent stake by the Bank of England, has invested about £40m in nearly 600 businesses in

Scotland. It adopts a watchful approach towards new businesses preferring to help out management before trouble sets in rather than carry out salvage work later.

About 12 per cent of ICFC's investment last year were high-tech, 30 per cent were start-ups and 12 per cent management buy-outs.

By using non-executive special directors appointed to help out new companies, ICFC hopes to bridge the problems of managerial inexperience, of building up a track record, and of improving financial acumen and efficiency while still allowing the firm's creator to follow through his ideas.

The Scottish Development Agency, the Government-backed industrial promotion body for Scotland, also has an active programme with about £18m invested to date in Scottish-based companies. About a quarter of this is money in high-technology

projects. During 1981/82, the agency invested £5.8m which attracted a further £40.7m from the private sector in joint ventures.

The SDA also takes a direct involvement with its investments, nominating a director from outside the agency—on the boards of the companies involved. These directors are usually senior businessmen with wide experience able to give a young company a fuller perspective about management and development.

If the ICFC's role seems to have been taken on board by the SDA it may be due to the fact that Dr George Mathewson, the agency's chief executive and Mr Donald Paton, the head of its investment advisory wing, Scottish Development Finance are former ICFC men.

Scotland also has several major purely technology-based venture capital organisations such as Murray Johnston's Murray Technology Investments and Advent Technology.

Similar moves aimed at developing a closer understanding of the customer's business and his problems are being made by the main clearing banks and by the overseas banks represented in Scotland.

The Royal Bank of Scotland is shortly to set up its own merchant bank to join the Bank of Scotland's British Linen Bank and the independent Nolle Grosart merchant bank while the Clydesdale is pleased with the development of the Clydesdale Industrial Finance Division. The Royal seems to have recovered from the trauma into which it plunged after its failure to merge with Standard Chartered. A management reshuffle brought Mr Sidney Proctor from the bank's English subsidiary, Williams and Glyn's, to take charge of the Royal group.

Mr Proctor is overseeing the expansion of the bank's computerisation, and planning the closer integration of the Royal with Williams and Glyn's.

The Bank of Scotland has also been active in the field of computerisation and recently announced a breakthrough for Britain in the field of home banking. Under a scheme launched with the Nottingham Building Society and British Telecom, customers will be able to examine their accounts and make transactions through a Prestel terminal.

The Clydesdale, a subsidiary of the Midland Bank has been the first in Scotland to experiment with point of sale computerised transactions in Aberdeen. Customers may pay for petrol by running the Clydesdale card through a terminal and punching in their personal code.

## Finance

by Mark Meredith

markets and the problems of transport and marketing from, say, Highlands, place these businesses much more at risk, and hence they are much more of a financial worry to their backers than they might be nearer to London.

As the heavy industries decline, however, much has been staked on advanced tech-

Development Agency. Finance houses and banks have also become increasingly willing to become involved with managerial problems.

ICFC which is owned largely by the English and Scottish clearing banks, with a 15 per cent stake by the Bank of England, has invested about £40m in nearly 600 businesses in

## The Remplo Resource is here on your doorstep

There is a resource right here on your doorstep that could help you to cope with sudden rush orders and longer term production runs, by providing the services you need at the most economic prices.

And in these days of high overheads any company that can provide a variable cost factor has to be good news. We can reduce your fixed costs and help you avoid costly investment in plant and labour and allow you to increase your output for as long as you need. You only pay for what you get.

The Remplo Resource can provide your extra factory space, additional manpower and machinery and skills. A look at the variety of product and service areas we work in will confirm our versatility.

We have close to 40 years experience to call on as well as a nationwide network of 94 factories, employing over 11,000 people. Our turnover last year was over £42 million.

And our dedicated workforce work to the strictest standards possible—yours.

Contact the manager of your local Remplo Resource centre.

The fact that Scotland's greatest export is people has not gone unnoticed in the world. Famous Scots who pushed back frontiers on Continents, in Medicine, Sport, Technology and Literature are commemorated on postage stamps of over 60 countries.

It appears that innovation and service are inherent in the Scottish character. And the Clydesdale Bank follows in that tradition. It was the first bank in Scotland to introduce cheque cards and personal loans. The first bank in the United Kingdom to link every branch by on-line computerised counter terminals and do away with all those annoying pieces of paper and it has led the way by pioneering the first on-line point of sale terminals in retail outlets.

And, as everyone should know, the Clydesdale Bank was the first Clearing Bank in the country to introduce no service charge to personal current account customers who stayed in credit, even by a penny. Now other banks have followed.

And that is the other sincere form of flattery.

## New Technology

by Mark Meredith

## 40,000 work in the sector

HIGH TECHNOLOGY is a central element of Scotland's industrial future. The country's economic base of heavy engineering has been on the wane almost since the start of the century and hopes have been pinned on a new technology to give Scotland a new industrial direction, to create more jobs and to head off further economic erosion.

Electronics firms have been increasing in number and size for nearly two decades. Even in the light of the intense international competition for new inward investment in factories by the big micro-electronic multinationals, there are real signs that the industry here has arrived and put down permanent roots.

Today electronics employs 40,000 workers in over 200 companies in Scotland with the principal areas of electronic development in defence, industrial and commercial telecommunications, information systems and semi-conductors.

The foundations for this growth came in the Fifties, when some of the big names in the industry built their first factories in Scotland: IBM, Burroughs, Honeywell, NCR and Hewlett Packard.

In the explosive growth which the industry experienced in the years that followed, Scotland fared well in bringing in further development. Some of this growth has been spontaneous and some of it caused by enlightened encouragement by government development agencies.

## Sub-culture

Inside the industry, officials now point to one indicator which shows an established and settled electronics industry—the emergence and consolidation of the electronics sub-culture.

This is the proliferation of supporting industries which grow and feed on the larger electronic factories. The industry sees them as welcome camp followers spreading the support infrastructure and relieving the need for long foreign lifelines in terms of services and sub-contracts.

The sub-culture is part of the type of growth sought for by the electronics division of

the Scottish Development Agency—the main industrial promotion agency for the country.

It offers the greatest prospect for indigenous growth often using Scottish engineering talent and prevents the region becoming simply a series of separate assembly points.

About half of the employment in Scottish companies in this field comes from sub-contracting firms serving the resident multi-nationals.

Science parks

Another thrust of the electronics development has been to link the industry with the country's eight universities. A network of science parks is underway to bring industry and university engineers together on university campuses. Among the lures put out to potential investors is the 27 per cent growth in graduate electronics engineers from Scottish universities during the past four years.

The right kind of financial incentives has also been instrumental in bringing in and keeping much of the foreign investment. Located in Scotland—the inward investment arm of the SDA and the Scottish Economic Planning Department offers potential electronic settlers regional development grants, selective financial assistance, and low-cost accommodation.

The proposals for a science park at Stirling University were among the features which led to Scotland's industrial coup of the year—the announcement from Wang that it was to invest £38m in an office automation production plant on the campus which would eventually employ 700 people.

Although delighted at the decision, Scottish planners had not exactly been counting

## The Scottish Electronics Industry

Employment by sector

Source: Scottish Development Agency

on a manufacturing operation actually setting up in a science park, a concept designed to be orientated more to research. But Wang has said that it will be drawing on the university's engineers. More than 30 companies set up in Scotland last year, most of them in electronics.

The central belt of the country is destined to become Europe's largest producer of semi-conductors by 1985. Nippon Electric Company has taken delivery of a microchip plant at Livingston as part of one of the biggest Japanese manufacturing investments in Europe. The £40m plant is soon to become operational.

Among U.S. companies, General Instrument Corp opened a new wing of its semi-conductor plant at Glen-

rothes; Motorola started a new building programme for a similar facility at East Kilbride and National Semiconductor has a \$45m expansion programme under way at Greenock.

Vital for the growth of home-based, leading-edge industries—as those plants at the high research and development stage of electronics are called—is the provision of venture capital from the financial sector.

One prominent example has been Technical Development Capital, the high-tech arm of IFC which put almost £1m behind Rodime, a young company engaged in the computer service industry. Shares in Rodime have recently been floated in the U.S.

## The threat to Ravenscraig

SCOTLAND'S STEEL industry is in crisis. It has become an endangered species in the light of world overcapacity.

It is a crisis which has a bearing, too, on the future of the Scottish coal mines and the extensive network of industries dependent on the presence of steel.

One of the options open to British Steel in the face of a loss of orders and a running deficit of £7.2m a week is the closure of one or more of its five big integrated steel mills. The Ravenscraig mill south-east of Glasgow is thought to be high among these unpopular options because of its distance from markets. Only about five per cent of the steel produced by the plant is actually used by Scottish consumers.

Scottish steel managers concede that they must produce at about three to four per cent more cheaply than mills to the south to compensate for the transport costs of getting their products to markets.

The implications of a closure on the Scottish economy and on the social fabric in the steel-producing areas involves a political as well as a commercial decision. The cabinet will have to decide eventually where British Steel should make its most drastic cuts.

Scotland's recent industrial losses make grim reading: Singer at Clydebank, Talbot's Linwood carworks, the Wiggins Teape pulp mill at Corpach and

another more recent highlands disaster, the closure of British Aluminium's smelter at Invergordon last December.

What has made the steel industry in Scotland and Ravenscraig in particular different is the unanimity across the political spectrum opposing a closure.

Mr George Younger, the

Secretary of State for Scotland has Scottish Conservative party support behind him in his fight on behalf of the works in the cabinet.

For Labour and the Scottish TUC the impact in terms of jobs make closure of Ravenscraig unacceptable. According to a study by Strathclyde regional council, up to 15,000 jobs may be lost in the west Lanarkshire area including the 4,400 at Ravenscraig as the effect of a shut down works its way through the scores of businesses doing sub-contracting work and services for the steel mill.

According to the STUC: "Whole sectors of Scotland's engine, engineering and metal-producing industries have been wiped from the face of the map since the present Government

came to office."

The Scottish Office has not intervened to stop the cutbacks and closures affecting some others parts of the steel industry, much of it already on short time. The recent closure of most of the Clydebridge works of British Steel's Plates Division and the proposed shut-down of the Craigmiles special

steel bar rolling mill alone will put nearly 1,000 steel workers out of a job.

These economies the Government sees as legitimate commercial decisions by British Steel, painful though the loss has been in terms of employment. Ravenscraig remains however the pivotal point for the industry in Scotland.

But where Mr Younger and the top civil servants join in the campaign supporting the mill is in foreseeing its role in maintaining a manufacturing sector in the country and fuelling any recovery.

Employment in steel in Scotland has contracted from over 20,000 in the mid-70s to around 10,000. The markets may be far away but the economic need at home is generally seen as reason enough to seek a way,

even through reducing capacity to a minimum, of keeping Ravenscraig open.

One of the sectors which is threatened more than others by further steel cuts is the coal mining industry. Scottish mines not only face the loss in demand for coking coal for the steel mills, but also the consequent drop in industrial demand for electricity, of which steel is a big user.

Last year 80 per cent of the 10.2m tonnes of Scottish coal went to power stations. Industrial demand has been falling steadily, reducing the need for coal-fired power.

Scotland has about 17,000 miners in 16 pits but recently the National Coal Board predicted that four of these pits would be exhausted by the 1990s. No new pits are planned, although some will be developed.

A touchstone for the opposition to closure by the miners' union has been the future of Kinneil colliery near Bo'ness in West Lothian. The miners under their leader Mick McGahey, have threatened to walk out if the Coal Board carries out plans to shut a £14m development plant and close Kinneil.

The project to drive a roadway under the Firth of Forth to link up with the Longannet complex on the north shore run into geological difficulties. The miners do not accept this and insist there is a future in the mine.

## Air Routes

by Mark Meredith

## Three-cornered fight for profits

The air routes between London and Scotland are busy. For British Airways the no frills shuttle services between London and Glasgow and London-Edinburgh are the second busiest after its Paris flights.

The Anglo-Scottish routes are, however, like the other domestic trunk routes, heavy losers. An estimated £50m was lost by all domestic carriers on internal routes in 1981, and the loss could be greater in 1982. So the arrival of a third airline on the Scottish route increased the general anxiety by airlines about their profit prospects.

At the end of October British Midland Airways started its six return flights a day service between Heathrow and Glasgow undercutting British Airways fare and including a meal and seat reservation for the one hour flight. British Airways opposed the introduction of a rival on the Heathrow route which it previously had to itself.

British Caledonian also felt the challenge with its operations from Gatwick to Scotland. The Civil Aviation Authority had rejected British Midland's application because of its view that there were no growth prospects for Scottish routes and the losses made by both the existing carriers—but this was overruled by the Department of Trade.

British Airways soon felt the pinch with a 17 per cent loss of traffic after the arrival of British Midland. British Airways which made a profit of £2.5m on the Scottish runs in 1979-80 last year turned in a £200,000 loss. It has had to cut costs further in the face of the new competition.

British Midland does not yet compete on the London to Edinburgh routes flown by British Airways and British Caledonian, but is expected to

do so from Heathrow some time in the New Year.

The Derby-based airline was determined to make its new operation pay and Midland managers said they could break even with 38 passengers on their 90-seater DC-9s, while 55 to 58 passengers would start to bring in money.

The airline had the advantage of fewer ground staff than the larger carriers but it, too, had the large infrastructure costs such as landing fees, security and other airport charges to bear.

British Airways and British Caledonian responded to the arrival of British Midland with publicity campaigns and some positive competitive steps. British Airways took space in newspapers advising passengers of "shuttle difference," while British Caledonian introduced a businessman's package with a free night at a London or Scottish hotel as well as a first-class return rail ticket between London Victoria and Gatwick Airport.

## Less frequent

While not feeling the direct pinch from Heathrow, British Midland's competition did make a difference to British Caledonian but by reducing the frequency of its flights British Caledonian has been able to maintain its average number of passengers per flight.

Its losses of between £2m and £2.5m are offset to some extent—about 15 per cent—by passengers flying the Scottish routes to connect with other British Caledonian international flights.

The new second terminal for Gatwick Airport will also increase the range of flights from that airport and possibly make the Gatwick destination more appealing for passengers from Scotland.

There must be an easier way to get your business off the ground.

If you're planning to expand, move, set up in business or open a subsidiary, you've probably already discovered that finding the right location is fraught with difficulties.

And, that although many places offer a whole range of different incentives, you have to knock on many different doors to get the whole picture.

In Scotland you won't find us giving you the runaround. We pool all our resources under one roof.

Our team of highly qualified specialists can offer just about everything the businessman could wish for.

Finance, including loans, Government grants, and equity participation with buy-back provisions.

A specialised Small Business Division, management advisory services, and specific units to deal with the electronics and health care industries.

And access to a huge choice of

industrial property to suit all needs, all over Scotland.

One visit, telephone call or letter to our London office will bring you the full range of information and assistance.

You shouldn't have much trouble finding it.

Scotland. Through one door. Locate in Scotland.

#### BUSINESS

## Ferranti Scottish Group continues to expand

New building and new business links have been responsible for expansion within the Scottish Group of Ferranti during 1982. The Navigation Systems Department opened the 50,000 sq ft Display Group building at Silverknowes and a factory at Bellshill was commissioned for the manufacture of Automatic Test Equipment for military aircraft. In the USA a new company, Ferranti Electro-optics Inc. has been established to market and support the products of the Electro-optics Department. Also in the USA, Ferranti Indiana was set up to market and manufacture Fuel Dispensing Group petrol pumps. The assets of Ocean Research Equipment Inc. of Falmouth, Massachusetts, were recently acquired and this company will be integrated with Ferranti Offshore Systems Ltd. of Aberdeen.

#### Briefly...

A 'Fit for Work' Award was given to Ferranti plc by the Manpower Services Commission in recognition of "the expanding policies and practical achievements in the employment of disabled people" by the Scottish Group. The CAM-X computer aided design and manufacture system, built by Ferranti Ceteo was exhibited recently at the Design Council in Glasgow and at Edinburgh University.

#### AVIONICS

### Advanced technology

The Head-Up Display (HUD), produced by Ferranti Navigation Systems at Edinburgh, completes the company's navigation capability. It now offers a comprehensive integrated navigation and attack package for military aircraft. No other company in the world can offer a similar avionics suite. The Combined Map and Electronic Display (COMED) chosen for the F/A-18 and Indian Air Force Jaguar is also produced at Silverknowes. This year, the Navigation Systems Department won one Queen's Award for Technology and another for Export achievement based on innovation and sales of COMED.

#### COMMERCIAL AND INDUSTRIAL Engineering excellence

Ferranti Communication Systems Group at Granton manufactures microwave radio relay systems based on the type 14000 equipment. Recent orders include transportable radio equipment for British Telecom and digital microwave radio relay and switching systems for the Mercury Communications Network. The Group also manufactures GTE telecommunications equipment in the UK. Ferranti Microelectronics Group in Edinburgh manufactures hybrid microcircuits for a variety of applications. Other electronic components including edge connectors, transformers, microwave and optical components and MF400 industrial lasers are produced by the Professional Components Department, Dundee. Shaft encoders and potentiometers are manufactured at Dalkeith. A new Ferranti optical absolute shaft encoder, believed to be the most accurate of its type, will have application in robotics and high accuracy measuring.

**The good news is FERRANTI Selling technology**

## Shetlands feel the pinch

ONLY TWO things unite fishermen: the weather and a strong distrust to put it no higher, of fishermen from any other part of the country. Given bad weather, fishermen will put aside all their antipathies and antagonisms and offer help against the storm. But it is not about the weather that a good word for the foreigners.

The Shetland fishermen are a good example. The EEC agreement on fishing policy annoyed them because they thought foreign boats would threaten their livelihood. Their anger was almost as great as for the Grimsby men when it was suggested that boats from Humber might land fish in Lerwick.

The Shetland Fish Processors wanted more fish from the English boats to keep the factories running to capacity. This led to a row that was really symptomatic of a deeper malaise affecting the islands.

Now that construction work on the oil terminal at Sullom Voe has ended the banana days have passed. Unemployment is up, incomes down and there is a general feeling of uncertainty. Some extent of the drop in the economy can be gauged from the falling number of passengers using Sumburgh airport.

The Shetlands are now facing the sort of situation that many forecast would happen. People got used to high wages when the oil terminal was being built, while the traditional industries have already paid them. Now that the terminal has been completed a much smaller permanent workforce is needed than in the halcyon building days. The winter is always cold in the Shetlands but this year the economic climate looks like being colder still.

### Grimond's misfortune

IT SEEMS as though Jo Grimond has been in politics for ever. If Harold Wilson was right and a week in politics is

a long time then I suppose 32 years is just about even.

When the young Grimond was first elected Attlee was Prime Minister, Churchill champing at the bit to get back into office, and the Commons was full of tyros such as Powell, Macleod, Callaghan and Castle. Benu had still to appear and Mr Thatcher was a mere Parliamentary candidate.

If it was Grimond's misfortune to be in the wrong place at the wrong time.

Half a century earlier and his patrician good looks, sense of style and outstanding ability would have guaranteed him a place around any Liberal cabinet table. Instead, political power ebbed from the Liberals and by the time he reached Westminster the party was in such dire straits that the wits used to tell how the chief whip called a meeting and the rest of the party joined him in the phone box.

Today, even if the party's numerical strength in the Commons does not reflect its vote in the House, only a week before he announced that he would be giving up his seat he told the local fishermen on whom so much of his electoral support depends that they were mistaken in their opposition to the new fishing rules worked out within the EEC.

When the manager of Brora Rangers, who play in Sutherland, heard that his team's opponents were in the Scottish Cup he said the journey was like "a trip to Eastern Europe... a real expedition."

Who were these Soviets he had been drawn against? Gdansk? Budapest? Nothing of the sort. The opposition was to Selkirk, 350 miles away in Border country. If that is what Highlanders think of fellow Scots what on earth do they think of Sassenachs?

## SCOTLAND IV

Sullom Voe oil terminal: the banana days have gone

### Better second round

SCOTLAND HAS done better from the second round of enterprise zones; while it picked up only one, Clydebank, in the first 11 announced by the Government, nearly two years ago it now has another two. Enterprise zones may still be opposed by some Labour politicians, but as just over 30 authorities applied to be included in the latest list, most of them Labour-controlled, they are widely appreciated.

The inclusion of Invergoron was a natural response after the collapse of the British Aluminium works which provided as much employment north of Inverness. The third zone, shared between Dundee and Arbroath, is not only an attempt to do something about the serious unemployment on the Tayside coast, now well

over 20 per cent, but can also be seen as part of the £39m plan to promote high technology investment in Dundee.

The dispute between Times and its workers, and the consequent threat by Mr Clive Sinclair of the microelectronics concern to take his custom elsewhere, brought black clouds over the city. The rejuvenation plan, in which private investment is expected to contribute almost half of the outlay, will give the city a chance to shine again.

One of the factors which undoubtedly led to the choice of Dundee as a centre of advanced technology was its six-mile long waterfront on what is one of the best coastal sites in Europe. These days, getting your goods to Europe is everything.

### Edinburgh's welcome

THERE CAN be few nicer places in the country to join the Christmas shoppers than Edinburgh. Not only is there the incomparable Princes Street to contemplate when the going gets rough but the way is, in any case, smoothed by the inherent niceness of the Scottish sales persons. The Scots have a way of making you welcome and when they say "have a nice day" you know instinctively they are not saying it with the plastic sincerity of so many Americans.

The windows on Princes Street are particularly attractive this year. A friend shocked me not long ago by saying she thought Princes Street had lost its character, full of chain stores like Marks & Spencer, Richard Shop, W. H. Smith, Burton and the rest.

I can see what she meant and though I do not fully agree with her it is a fact that it is more pleasant to look across the road to the Mound than stand on the castle and look at the standard High Street architecture.

To my mind George Street, which runs parallel to Princes Street has a lot more interest about it than its more famous neighbour. It has kept the little shops, many of them operating from basement premises, that give some indication of what the city could have been like a century ago. I do not recollect that Dickens ever wrote anything about the city, but George Street is certainly redolent of him at this time of year, especially just as the daylight gives way to dusk and the lights come on.

## GEAR transforms the East End

EIGHT YEARS AGO a government report stated baldly that the East End of Glasgow was the most socially deprived city area in Europe. That claim would be impossible to make today, even if it were true then. From Glasgow Green, on the eastern edge of the city centre, through Bridgeton Cross and Parkhead, home of the Celtic football club, to Shettleston and Tollcross on the fringe of the city, there is a new look. The once grim tenements and factories have gone or have been given a facelift.

Grass is growing, houses being built, factories are going up and the old signs of urban decay being removed. The derelict part of the Templeton ironworks on the industrial side of Cambuslang has come down, as has the chimney on North Clyde's chemical works, which used to pump the smoke directly into the 12th and 13th floors of an adjacent block of flats. The Dalmarock power station has gone the same way—to the knacker's yard.

This transformation, which is little short of a minor miracle in such a short time, has been due solely to the GEAR programme initiated in 1976 as a partnership between the Government, the Scottish Development Agency, the Scottish Special Housing Association, Strathclyde Regional Council, Glasgow District Council, the Greater Glasgow Health Board, the Housing Corporation and the Manpower Services Commission, with the SDA having the coordinating role.

GEAR, the Glasgow Eastern Area Renewal project, was the first of its kind in Britain and, covering 4,000 acres comprising a tenth of the city, the largest in Europe. It has become a model for other urban renewal projects and the Government would like to see its concept extended to other cities in Britain, such as Liverpool, though, for doctrinaire reasons it is unwilling to take the step of setting up another quango to mastermind such a venture.

In 1978, when GEAR got under way the East End of the city was virtually a no-hope area. To have called it the worst area of urban deprivation was an exaggeration. When Sir Antonio Giddi, the European Commissioner, who comes from Naples, saw the city he asked officials what was so bad about it. They should see Naples, he said.

It was, however, a part of the city which had been allowed to deteriorate. A misconceived move by the council after the war had moved people out to the enormous and greatly disliked, tower-block housing

estates on the periphery of the city so that the area's population had fallen from a peak of 145,000 in 1950 to 145,000 in 1976. Industry had decayed with the movement out and what was left tended to be the socially low-grade concerns, such as scrap yards, car breakers and metal bashes. Noise and dirt were the rule. Local jobs were hard to find even for those people, inevitably, the older ones, who had stayed behind.

New houses had been built, because of the council's dispersal policy, little money spent on repairs and maintenance and no new private houses had been built in the area for 50 years. All that has changed. The first building that confronts a stranger to the area is the re-

vating existing premises as fast as it can. Half the inhabitants have had some physical improvement to their tenement or house, "a very economic way of providing better housing," according to Mr Richard Colwell, the SDA's director of the GEAR project.

At the same time, the factory-building side of the programme has brought work back into the area. The East End will never again have the sort of heavy industrial works that once provided its Glasgow's backbone. Those have gone for ever.

It does now, however, have a solid base of small units, ranging from 500 sq ft up in size. So far, 170 units have been completed and all have been

### Development Agencies

by Anthony Moreton

furnished Templeton Business Centre facing Glasgow Green, once, the Templeton carpet mill, where phases one and three of a seven-phase project have been completed—phase one offering offices for electronic concerns and phase three workshops and studios. All the available space has been taken.

A little further on, at Bridgeton Cross the "bandstand" at the road junction has been restored and repainted in red, white and black, not just a cosmetic operation but part of a traffic management scheme.

Physical improvements are an essential part of the work. Fences, barbed wire and old buildings have been pulled down to be replaced by grassed banks, symmetrical bushes with their profusion of red berries, and the GEAR project's distinctive red-painted guard rails no more than a foot or two off the ground. The East End has, quite literally, sprouted colour.

The biggest success has been to attract private housing. Many sceptics doubted if anyone would buy in the area given not only the lack of jobs but also social problems such as vandalism, crime and drunkenness. The first units put up by UNIT at Tullcross, however, sold quickly and there are now seven builders in the area, including Barratt, London and Clydebank, Bovis and Miller.

By the end of November they had built 700 houses and another 300 were under construction or planned, with eager buyers for all of them. Alongside this building programme GEAR has been reno-

let. "We are still letting as we complete, even after six years, which says something of the success of the programme," Mr Colwell says. Those factories have produced some 3,500 jobs.

GEAR has succeeded because it has been a combined effort. But it is to be admitted that much of its success has arisen because it was launched in a time of financial stringency. GEAR had the money and the local authorities had constraints; this enabled the SDA to act as a paternal autocrat, able to get its way when in potential situations of conflict.

The Agency has also succeeded because it has involved the local community at every step. "This is probably the single most important lesson we have learned," according to Mr Colwell. "Involve the people. Tell them what you propose to do before you do it and ask for their reactions. And take their reactions into account."

"Their matter most of all. It is their home. We have had regular meetings with the community councils, the residents' associations, action groups, anyone."

"We encourage people to walk into our community centres and chat to us about our plans. Thousands have done it with the result that opposition to our ideas is minimal."

"What has happened here has made people walk about their own area with pride. That has been reflected in the number who have wanted to come back and live here. This is the best reward we could have had."

## City of statues

RIDING ROUND London it is hardly possible to turn a corner without bumping into some leader immortalised in stone or bronze. From Nelson on his column — arguably the most famous — to Brunel on the embankment, Churchill in Parliament Square, nearly outside the Ministry of Defence, and any number of long forgotten generals sitting on horses the capital is jammed full of them.

To my surprise, a most English cities have but a handful of statues. Glasgow has paid its respects to the past in the same way. There are monuments to Burns, James Watt, Victoria and her beloved Albert, Gladstone, Sir Robert Peel and the great Wellington. There is an obelisk to Nelson on Glasgow Green and a monument in the same place to John Pollock MacPherson. If the deeds of MacPherson escape you, as they escape many other Glaswegians, at least it shows the city has honoured the not-so-great along with the great.

Many of these monuments are in need of repair. Nelson's obelisk is cracked and its plinth is eroding. The McLellan arch, also on Glasgow Green, is sinking and in danger of toppling over the Doulton Fountain has been vandalised.

Even more unfortunately, Glasgow has run out of money to restore these civic monuments. But it has come up with a good idea: adopt a monument. It wants civic-minded citizens to take responsibility for one of the 88 monuments, steeples, wells, towers, fountains, and bridges that are in need of aid and succour.

You do not have to be rich to help out. The Kelvin Way bridge needs its graffiti scrubbed off, the cast-iron drinking fountain in Overton Park, Rutherglen, is covered in weeds. I am glad to say that Glasgow has responded to the call. Tennent Caledonian Breweries has already taken over the repairs to the Lady Well Fountain, one of 16 public wells in use around 1720, and others have also come forward. Some years ago when local theatres were going up all over the place many clever businessmen raised money by inviting local people to buy a brick.

## GLENROTHES NEW TOWN—FIFE

### MODERN SINGLE-STOREY FACTORY

158,000 sq. ft approx on 1422 acres

- ★ Previously used for electronics manufacture
- ★ Plant and machinery available if required
- ★ Class 100 clean room of 5,000 sq. ft
- ★ Fully air-conditioned computer dept.
- ★ Canteen, laboratory and office space
- ★ Paved parking for 266 cars
- ★ Land for future expansion
- ★ Special Development Area attracting maximum financial benefits

## ROBOTICS

Japan's  
micro  
versionBy Jurak Martin  
in Tokyo

MITSUBISHI ELECTRIC this week put on the market an inexpensive new micro-robot whose enhanced versatility will, the company believes, be particularly attractive to small companies in light industry.

The micro-robot, called the Move Master Two, is a faster, more durable version of the original Move Master, introduced last year and designed for training, educational, display and hobby purposes.

The particular attraction of the new version lies in its price and enhanced mobility. The basic manipulator and drive unit costs ¥1,000 (U.S.\$4,500).

Though fully compatible with almost all makes of personal computer, the drive unit also contains a solid state program capability.

Although extras could add anything from ¥200,000 to ¥600,000 to the base price, depending on the method of control, the Move Master Two is still very much in the low price range.

Other industrial "pick and place" micro-robots in this price band have more limited functions, according to Mitsubishi Electric. The Move Master Two is unique in being able to move vertically as well as in a horizontal plane and is multi-jointed.

A typical full sized assembly robot runs at between 772-10m. The Move Master Two is nothing like as fast as its bigger brothers—taking three to four seconds to complete a simple pick and place cycle, and is far less durable.

## FISHING LURE

Artificial reefs to  
attract the shoals

BY MAX COMMANDER

AS EVERYBODY knows, the Japanese eat a lot of fish. For years they have dropped concrete artificial reefs in close offshore areas. After a while coral and a variety of organisms attach themselves to the concrete. This attracts shoals of fish and inshore fishermen harvest the catch.

But the Japanese have a slight problem. The artificial reefs either in concrete or now in steel, lure bream, yellow tails, mackerel, herring and tuna but salmon, probably wiser than their cousins, will not go anywhere near artificial reef.

Experts at Nippon KK, who have been experimenting with steel fabricated reefs—trying out different shapes, colours and resistance to vibration—would dearly like to know why.

As one Japanese fish spokesman said: "The Japanese tend to be appreciative of the fact that if fish is expensive then they believe that the flavour must be better."

But, steel or concrete, the system appears to work for most fish. "Nearby offshore fishing cuts energy costs," said the NKK. Steel reefs in Japan are very high. Close inshore fishing is cheap by comparison with deep sea fishing where about 80 per cent of the cost of the fish is spent on fuel and transportation.

NKK has been conducting tests on artificial steel reefs for about eight years, mainly to test different shapes. Ten units have been placed in waters 20 to 40 metres deep off the Miyagi coast.

## ENGLISH ELECTRIC GAMBLES \$1m ON ENTERTAINMENT PROJECT

## Big screens for world sports stadiums

BY ELAINE WILLIAMS

ENGLISH ELECTRIC VALVE, part of the GEC group, is taking a £1m gamble on its latest development.

It is to build a television screen measuring 20 feet high and 30 feet across to show to potential customers.

There is a growing market for such system in sports stadiums to entertain the audiences before the match starts and during the interval.

Mr Martin Jay, managing director of the Chelmsford based company, believes that the company's long expertise in display systems based on cathode ray tubes gives it a good chance of success in a market which is dominated by the Japanese.

Cathode ray tubes, or CRTs, form the heart of every domestic television set. EEV has developed miniature versions which are used in illuminated display panels, but the Starvision system takes the design a little further.

Mr Jay said that Starvision would create at least 100 jobs within the company and recruitment had already started. Despite the recession, EEV has managed to increase its exports by 35 per cent this year with total turnover around

\$40m. EEV has created 150 new jobs in the past 12 months.

EEV, obviously, has its eyes on Wembley Stadium as a show-piece for its technology. The Wembley Authorities are known to be considering installing a new giant display board so that it can provide better action replays and attract television advertisements which can be shown in the interval.

"It is our objective to sell at least three boards a year," said Mr Jay. This would mean capturing about 30 per cent of the world market for large display screens.

At present there are about 30 systems installed in sports stadiums throughout the world. About 80 per cent of these are based on cathode ray tube technology, the remainder use lamps.

Simply, a cathode ray tube consists of three main elements. These are a phosphor screen which glows when electrons strike it, an electrode which emits the electrons and, a small electrode called the grid which controls the electron flow, and, hence the brightness of the phosphor screen.

In order to work, the whole assembly has to be enclosed in a glass envelope from which all the air has been removed. By

using different colour phosphors — red, green and blue — the whole range of colours can be produced on the screen.

In the Starvision system eight phosphor dots, about one inch square, are enclosed in a single glass tube. These are then made into modules of eight tubes and fixed to a frame with great accuracy to make the complete display.

It uses a conventional television signal, which is coded into digital form. The digital signal is temporarily stored in an electronic memory and is used to control the individual lines of phosphor dots across the display. Each temporary memory store controls up to four such lines.

EEV's main competitor is the Japanese Mitsubishi Corporation which has installed many of the existing colour systems throughout the world.

Mr Ralph Nixon, who is in charge of the Starvision development, says that EEV's display screen consumes only one fifth the power of the Mitsubishi system, and weighs far less. This is because Mitsubishi has only one phosphor dot per tube.

The full-size Starvision television screen will contain 10,000 individual CRT tubes, each of which contain eight

English Electric  
Valve's Starvision  
Display  
Tube

The basic elements in the Starvision display systems are thin cathode ray tubes which each contain eight phosphor dots. By April, Mr Nixon says the company will have an 8 ft square display board to show to potential customers. This week the company is going into the final stages before full-scale manufacture of the small cathode ray tubes can begin.

Engineering contractors to the oil, gas, chemical, process and power generation industries.

William Press Group, Tel 01 353 5544.

To serve the potential market, the company estimates that it will have to make about 50,000 CRT tubes every year.

The company's traditions lie in electronic components. Its products range from displays based on cathode ray tubes, magnetrons for radar systems, and tubes for infra-red cameras.

But, increasingly, the company has turned towards the building of complete products and systems such as the "Pevicon"—a portable camera which is heat sensitive. It is about to be tried out in British fire brigades to help firemen see through smoke.

## Disc drive

SHUGART, the specialist rotary memory company, has managed to reduce the height of its 5.25 inch Winchester disc drive by 50 per cent.

Known as the SA 706 the unit stores over 6 megabytes of data on one platter; another version, SA 712, can accommodate over 13 megabytes.

Technically, the height reduction has been achieved mainly through more efficient spindle and stepper motors. More from the UK suppliers, CPU Peripherals on Walton on Thames 16433.

All true patriots will be  
delighted to hear that IBM computers  
are leaving the country

IBM products left Britain last year in their thousands. They came off the production lines of our Greenock factory in Scotland and our Havant factory in Hampshire.

And they went to our customers all over Europe, the Middle East and Africa, earning £319 million for Britain. Software and allied services sold abroad brought in another £101 million.

All told, that £420 million puts us 12th in the list of Britain's biggest exporters. What's more, over the past 30 years, we have balanced our trade.

That's in stark contrast with the substantial trade deficit of the whole U.K. computer industry.

These exports do one thing more; they help sustain over 4,500 manufacturing jobs in IBM U.K. and a similar number of jobs among our U.K. suppliers.

IBM computers are leaving the country.

## IBM IN THE U.K.

- 15,000 jobs in 40 locations.
- Factories in Greenock and Havant.
- Laboratory in Winchester.
- 11,000 U.K. suppliers.
- £118 million invested last year.

## Diodes

## New range

A RANGE of Schottky diodes for use in switched mode power supplies has been introduced by International Rectifier, Oxford, Surrey. Capable of standing temperatures up to 170°C, the diodes can handle currents of 40A and 60A. Further information is available on Oxford 3215.

## Detectors

## Hand-held

AT A cost of a little more than £100, Graseby Dynamics Park Avenue, Bushey, Watford, Herts., 0823 285661 has introduced to the market a hand-held metal detector designated the GMS. The detector is housed in a matt black polycarbonate case 32 x 6.5 cms. A monitor indicates the need to replace the standard nine volt battery.

Companies and Markets

WORLD STOCK MARKETS

# Dow closes sharply lower

WALL STREET stock prices closed sharply lower as the wave of selling that hit video game stocks on Wednesday spread to the rest of the market.

The Dow Jones Industrial Average moved lower throughout the day and closed off 19.13 points at 1,027.96. Declines led advances by more than two to one and volume narrowed to some 91m shares from 121.037 shares.

AT 2:58 on the New York Stock Exchange all-common index was down 47 cents at 81.26.

The Dow Jones Industrial Average was off 8.27 at 1,038.52 by noon, although it had earlier been down more than 15 points. Nearly 1,000 Big Board issues pointed lower, while less than 400 advanced with turnover at about 40m shares.

Wattell, which sells Intellivision, was also delayed quotation after having dropped more than two points on Wednesday. Coleco, another video games maker, gained a point to \$394 after forecasting heavy trading for Christmas.

Heavily-traded Chrysler rose 75 cents to \$141, following reports that the United Auto Workers and Chrysler Canada had agreed on a new contract.

American Stock Exchange prices declined with the Amex index off 3.15 to 335.55.

## Canada

Canadian stocks were broadly lower in early trading, with the Toronto composite index off 21.0

points to 1,857.7 on a volume of 121.037 shares. Declines led advances three to one. In Montreal two indices pointed lower with Industrials down 2.76 at 144.28. Golds and Oils registered particularly sharp falls.

Among actives, Dome Petroleum was off 5 cents at \$3. Toronto Dominion Bank lost 75 cents at \$391, and Imperial Oil shed 1 to \$254.

## Tokyo

The market closed sharply lower following light trading on growing concern about the recent high price levels, coupled with the yen's setback against the dollar and the overnight fall on Wall Street. The market average fell 58.50 to 2,945.25. The Tokyo Stock Market index fell 430 to 583.20 on high volume.

International Blue Chips and video tape-recorder makers led the fall due to a slowdown in video sales both in Japan and abroad.

Sony Electric lost Y32 to Y468, after news that European video manufacturers may appeal to the European Commission against alleged dumping by Japanese companies. TDK Electronics lost Y160 to Y520.

Major falls included Sony down Y90 to Y4,090, Hitachi Y14 lower at Y754, Toshiba down Y8 to Y378, Mitsubishi Heavy Industries off Y5 at Y218, Sumitomo Y13 down to Y767 and Fuji Photo off Y30 to Y1,900.

But Fujitsu recovered sharply after initial losses and Drugs tended mixed.

## Germany

The Commerzbank index of German shares calculated at mid-session October 1979 on lively demand, but profit-taking later erased the gains and many shares closed below Wednesday's levels. Chemicals, though off their best, finished above Wednesday's levels. Hoechst was

DM 2.20 higher at DM 113.20

was DM 1.70 higher at DM 113.20

and BASF rose 20 pfennigs to DM 118.

In mixed Motors, VW was a strong feature, ending DM 3.20 higher at DM 40.70 despite a nine-month loss and plans for short-term working.

Elsewhere in Motors BMW added 70 pfennigs to DM 228.70, but Daimler, which made strong gains in the recent rally, shed DM 1 to DM 214.50.

## Commerzbank

lost DM 1.50 to DM 136. Deutsche Bank fell DM 1 to DM 278 and Dresdner shed 50 pfennigs to DM 146.50. In Electricals BKK fell DM 4.50 to DM 54 and Thyssen edged 40 pfennigs to DM 257 and AEG fell DM 1.70 to DM 29.60.

In Steels, Kloeckner lost DM 1.50 to DM 54 and Hoesch shed 20 pfennigs to DM 65.90. Prussag lost DM 1.50 to DM 200 in Metals but Metallgesellschaft added DM 2.50 to DM 214.50.

## Amsterdam

Dutch shares weakened on substantial selling pressure after Tuesday's gains. However, prices did rally slightly later. In Data Processing KLM fell F1 8.50 to F1 140.50 and Unilever was F1 1.90 lower at F1 194.50. In Banks, ABN lost F1 2 to F1 303 and WNC fell F1 1.50 to F1 101. Mortgage Bank FCB was down F1 1.60 at F1 43.90.

Insurances were uniformly lower despite picking up towards the end of the session. Ennia was F1 1.50 lower at F1 136.50, while HBB fell F1 5 to F1 58. Publisher Elsevier was down F1 7 at F1 120 and Groot-Broeders fell F1 1.50 to F1 115. VNF-Stork fell F1 1.70 to F1 62.30 and Bols fell F1 2 to F1 70.70. HVA and AS&S were also lower. Later, both KLM and Unilever suffered further losses.

## Switzerland

Swiss share prices closed easier in active trading after Wednesday's decline on Wall Street. The firmer dollar and rising euro on the dollar also caused some insecurity and year-end positioning on the other factor. But the market's expectations of

lower interest rates next year provided underlying support.

Banks fell across the board, with Union Bank of Switzerland, Swiss Bank Corp and Credit Suisse markedly lower. Some financials advanced against the trend, with Motor Columbus, Interfood, and Landis and Gyr higher. But Oerlikon, Buchler, Adler and Interstep declined.

## Australia

Renewed selling pressure pushed share prices down in Australia following the trend on Wall Street, the drop in the gold price and pressure from overseas selling orders. The All Ordinaries index fell 6.8 to 476.9 and All Industrials were off 33 at 699.8.

BHP closed 12 cents lower at A\$8 after touching a low of A\$7.95, and CSR fell 12 cents to A\$7.35.

## Stockholm

Swedish share prices closed mixed in heavy trading. In Engineering, Alfa-Laval fell SKr 5 to SKr 250 while Atlas fell SKr 1 to SKr 243. In Cars, Volvo rose SKr 3 to SKr 278 while Saab-Scania fell SKr 1 to SKr 170.

## Hong Kong

The market closed firmer at the day's high, but light trading after an early decline and the Hang Seng index closed 18.41 higher at 713.34. Asias were mixed, with HSBC up HK\$3.75 on rumours that the HK/Shanghai Bank will buy a property from a company owned jointly by HK Land and

Both HK Land and HK/Shanghai Bank declined to comment on the rumour. HK Bank was HK\$1.25 higher at HK\$37.65 and Carian rose 10 to 97 cents.

**Stores above worst**

Leading Stores attracted a useful number of business and although sustaining moderate falls, most finished well above the worst. Gussies A, down to 580p in front of the announcement, rallied to close only 5 off on balance to 583p following the price rise.

[illegible][illegible]

great traders Thomas Northcote eased a couple of people, and following the preliminary leading Textiles reversed Wednesday's falls with Dawson 131p, and Nottingham Manufacturing, 188p, both better and Allied 3 up at 218p. The market continued to attract a large number of redemptive orders, interest and after spending

# BUSINESS INFORMATION FOR SALE

"I'm always needing information - financial statistics, details about competitors, insights into the economy... where can I get it all from?"

"Simple. From the Financial Times Business Information Service."

As a subscriber to the Financial Times Business Information Service, you can have access to all the information you need to make the right decisions. Because BIS is able to draw on the unrivalled resources and expertise of the Financial Times, it is able to provide information on every area of business. And fast. Over the telephone. In a printed report. On microfiche. Or even via on-line computer links.

Detailed facts about every single quoted company in the UK and USA. Material from the Financial Times library, including files on 25,000 prominent personalities.

Information on every aspect of marketing, drawn from a wide variety of international sources.

Facts and figures on all manner of financial and economic topics, from exchange rates and employment statistics to export quotas and share prices.

In short, BIS places a complete research department at your command. You ask the questions. We provide the answers.

The cost? It can be as little as £250 a year, exclusively to subscribers, with the average enquiry costing £9.50. A fair price for getting the right information. To find out how BIS can become your all-purpose source of business information, please return the coupon.

## Your information is our business

BIS is a division of the Financial Times Business Information Limited, a wholly owned subsidiary of the Financial Times. Through its various divisions - which also include McCarthy, MIRAC, FINTEL and International Business Newsletters - the company is able to provide the business world with a comprehensive range of information services.

To: The Marketing Department, FT Business Information Ltd, Bracken House, 10 Cannon Street, LONDON EC4A 3DF

## FT COMMERCIAL LAW REPORTS

### 'Dividend' excludes tax credit

HAWKER SIDDELEY GROUP LTD v HAWKER SIDDELEY AVIATION LTD AND ANOTHER  
Court of Appeal (Lord Justice Stephenson, Lord Justice Oliver and Lord Justice Slade): December 6 1982

WHERE A company has a statutory obligation to pay a "dividend" in the normal sense of the word, tax credit does not form part of the maximum amount payable if the formula for calculating the amount covers any maximum payments permitted from company funds and not merely "franked payments" consisting of money paid and tax credit.

The Court of Appeal so held when allowing an appeal by Hawker Siddeley Group Ltd (Hawker Siddeley), plaintiffs, from Mr Justice Dillon's decision in *Hawker Siddeley Aviation Ltd (Aviation) and Hawker Siddeley Dynamics Ltd (Dynamics)*, defendants, had fully discharged their respective liabilities to pay dividends to Hawker Siddeley upon their compulsory acquisition by British Aerospace.

Section 23 (1) of the Aircraft and Shipbuilding Industries Act 1977 provides: "For the purposes of this section and section 24 below... (a) to payments of dividend shall be construed as references to 'franked payments' within the meaning of [the Finance Act 1972]."

Section 24 (1) provides: "...the payments of dividend... permitted for any period of control... are (c) the payments of dividend of amounts which, when aggregated, do not exceed whichever is the less of— (i) the certified net revenue of the company for the period of control...

Section 25 (1) provides: "As soon as possible after the date of transfer, each acquired company shall make the following payments to the persons who immediately before that date, were the holders of securities of the company... (b) payments of dividend for the financial period... of such amounts as to ensure that the aggregate payments of dividend are equal to the maximum amounts permitted under section 24 above..."

LORD JUSTICE SLADE said that the two defendants, Aviation and Dynamics, were wholly-owned subsidiaries of Hawker Siddeley. On April 29 1977 all

the dividend actually formed a part, for the purposes of that section and section 24, "Payment of dividend" in section 23 (1) (b) was used in its normal sense of referring to the actual payments made, and not in the extended sense of section 23 (5) (a). It followed that the obligation imposed by section 25 (1) (b) was an obligation to make a payment of a dividend in the normal sense.

Hawker Siddeley was entitled to be paid a dividend equal to the maximum amounts permitted under section 24 and to receive the tax credit appropriate to the net payment. Once the "maximum amounts" had been duly ascertained, there was no justification for sub-dividing them into the two elements to which Mr Justice Dillon referred, namely, dividend and tax credit.

If the maximum amount permitted under section 24, properly calculated, was £3,615,513 or £177,808, Hawker Siddeley could claim tax dividends equal to such sums, in addition to the tax credit. The wording of section 25 (1) (b) permitted the aggregation of the two amounts permitted under section 24. The maximum payments of dividend under section 24 were to be found by following the word for word the language of section 24 (1), which permitted payments of dividend of amounts which when aggregated do not exceed the certified net revenue of the company for the period of control.

For the final period of control, the certified net revenue was £3,615,513 in the case of Aviation, and £177,808 in the case of Dynamics. Those must be the amounts payable under section 25. Aviation and Dynamics were obliged by virtue of section 25 to pay to Hawker Siddeley dividends of £3,615,513 and £177,808 respectively, together with the appropriate tax credits. The appeal should be allowed.

Justice Stephenson agreed. LORD JUSTICE OLIVER, also agreed.

Appeal allowed. For the defendants: Andrew Park QC and Edmund Glasgow (Linklaters & Paines). For Hawker Siddeley: DC Potter QC and Alan Sebestyen (Simmons & Simmons).

By Rachel Davies  
Barrister

## Dollar maintains firmer trend

The dollar continued to improve in currency markets yesterday, helped by higher Euro-dollar rates and a rise in U.S. Federal funds rates. Euro-dollar rates usually show a firmer tendency towards the year end and together with other factors and the receding hopes of an imminent discount rate cut, helped to underpin the dollar.

Sterling was weaker overall but finished above the day's lows to show a fairly respectable performance given the dollar's recent improvement.

DOLLAR — Trade weighted index (Bank of England) 121.4 against 117.0 six months ago. High interest rates and above target money supply had been keeping the dollar firm, but a change of emphasis towards fundamentals such as rising trade and budget deficits has pushed the dollar steadily weaker. The dollar rose to DM 2.4510 from DM 2.4325 against the D-mark and SwFr 2.0670 from SwFr 2.0650. In terms of the Swiss franc, the dollar was firmer against the Japanese yen, rising to ¥245.25 from ¥242.00 and SwFr 6.9450 compared with SwFr 6.9475.

STERLING — Trading range

against the dollar in 1982 is 1.9265 to 1.5837. November average 1.6338. Trade weighted index 85.8 against 85.9 at noon, 85.8 in the morning and compared with 86.2 on Tuesday and 90.09 six months ago. Sterling remains weak against continental currencies and the yen on fears of a worsening balance of payments and lower world oil prices. Higher London interest rates and the general weakness of the dollar have pulled the pound up from near an all time low against the U.S. currency however. Sterling opened at \$1.6135-1.6135 and traded between a low of \$1.6055 and a high of \$1.6205 before finishing at \$1.6125-1.6135, a fall of 1.45c. It eased slightly

against the D-mark to D M3.9556 from DM 3.95 and SwFr 3.37 from SwFr 3.3650. It was also down against the French franc at FF 11.1650 from FF 11.2250 but improved against the Japanese yen to ¥395.75 from ¥394.

D-MARK — Trading range against the dollar in 1982 is 2.5540 to 2.2410. November average 2.3536. Trade-weighted index 127.8 against 123.9 six months ago. The D-mark is strong, helped by an improving balance of payments position and confidence in the Government's economic policy. It has benefited recently from the weakness of the dollar and sterling. — The D-mark lost ground to the dollar

at the Frankfurt fixing in fairly quiet trading. The Bundesbank did not intervene when the dollar rose to DM 2.4432 from DM 2.4351, after opening at DM 2.45. Sterling fell to DM 3.9580 from DM 3.9580 at the fixing, but the Swiss franc, Japanese yen, and Dutch guilder were firmer.

BELGIAN FRANC — Trading range against the dollar in 1982 is 50.21 to 52.12. November average 49.6228. Trade-weighted index 94.0 against 85.1 six months ago. The Belgian franc has fallen sharply against the stronger members of the EMS this year, including the Dutch guilder and D-mark, prompting the Government to introduce austerity measures to counter a weak economy and large budget deficit. — The Belgian franc fell to its lowest level since 1973 at 50.21 against the dollar, after the Bank of Belgium probably intervened to support its currency. Years of a growing conflict between the Flemish and French speaking halves of the country over the future of the troubled Cockerill steelworks was a factor behind the weakness of the currency.

## EMS EUROPEAN CURRENCY UNIT RATES

	ECU central bank rate	Current rate	% change from central	% change from previous	Divergence from central
Belgian Franc	44.7704	45.3883	+0.38	+1.40	+1.5807
Dutch Guilder	2.3400	2.3264	-1.18	-0.56	-1.6230
German D-Mark	2.3379	2.3181	-0.84	-0.42	-1.6898

Yugoslav Dinar	136.73	136.73	0.00	0.00	0.0000

Changes are for ECU, therefore positive change denotes a weak currency. Adjustment calculated by Financial Times.

## Volume disappoints

Volume was disappointing on the London International Financial Futures Exchange yesterday, particularly in the Euro-dollar contract, which traded only 688 lots, compared with recent levels of about 1,500. The March Euro-dollar opened 15 points down at 90.34, and was around 90.34 to 90.35 for most of the day, moving within a very narrow range, and closing at 90.34 after Chicago had opened in line with expectations.

The level of business in the short sterling deposit was again encouraging however, but some 500 lots lower than on Wednesday, when the market gained impetus from the volatility of London money market interest rates. As expected prices opened lower, at 90.01 for March, against 90.30 at the previous close. This was near the day's low, and prices then traded up to a

peak of 90.29, as the short end of the cash market showed an easier trend. Trading the spread between Eurodollars and the sterling interest rate was mentioned by traders, as some life members took advantage of the relative cheapness of the sterling deposit contract, and although the March position finished 13 points down on the day this was 16 points above the opening level.

Gilt volume was rather higher, at 1,144, almost all for March delivery. Prices were marked down at the opening, but recovered some lost ground in reaction to a steadier cash market. The steady decline in the basis price in the last few days seems to be mainly a reflection of the increased cost of carry, following the rise in cash market interest rates.
